It is the policy of OMEGA to comply with all worldwide safety and EMC/EMI regulations that apply. OMEGA is constantly pursuing certification of its products to the European New Approach Directives. OMEGA will add the CE mark to every appropriate device upon certification.

The information contained in this document is believed to be correct, but OMEGA Engineering, Inc. accepts

no liability for any errors it contains, and reserves the right to alter specifications without notice.

WARNING: These products are not designed for use in, and should not be used for, patient-connected applications.

RETROFITTING OVERVIEW

- The procedure for retrofitting a transmitter is divided into three parts:
 - 1. Removing the analog electronics assembly.
 - 2. Installing the smart electronics kit.
 - 3. Characterizing the retrofitted transmitter.

Two tools are required to remove the analog electronics and to install the smart electronics:

- Flat-bladed screwdriver
- ¹/₄-in. nut driver or wrench

The following equipment is needed to characterize the retrofitted transmitter:

- A Omega Model HC275 Communicator with SMART FAMILY[®] Interface
- An accurate pressure source, preferably 0.025% accuracy or better
- A 250 ohm resistor

The Smart Retrofit Kit, P/N PX750-SMART-KIT, contains the following items:

Quantity	Description
1	Smart electronic assembly
1	Electronics cover
1	Cover O-ring
2	Terminal eyelets
2	Board spacers
2	Standoffs

REMOVING THE ANALOG ELECTRONICS ASSEMBLY

Use proper earth grounding techniques when handling the smart electronics assembly. The smart electronics assembly is potentially sensitive to electric static discharge.

The vast majority of installed Model PX750 Transmitters have either 4-20 mA linear or 4-20 mA square root output .

The following steps describe how to remove the analog electronics assembly from transmitters for smart retrofitting.

NOTE Numbers in parentheses indicate parts shown in Figure C-1.

FIGURE C-1. Model PX750 Analog Electronics.

Ref.	1 Part	
No.	Description	
1	Amplifier Board (Linear)	V
2	Amplimer Board (Linear)	LINEAR OUTPUT
3	Standoff Screws (Linear)	
4	Calibration Board (Linear)	
6	Bayonet Connector Pins	
7	Standoff Screws (Linear)	
8	Sensor Module Electronics	
9	Wiring	
10	Zero and Span Adjust Screws	
11	Housing Cover	(6)
12	Retainer Screws (Square Root)	$\overline{)}(8) \qquad \overline{)}$
13	Two-board Amplifier/Squaring Assembly (Square Root)	
14	Calibration Board (Square Root)	
	(12)	
		SQUARE ROOT OUTPUT

1151-1151E02A 1151-1151D02B

1-4 With power disconnected, remove cover and three retainer screws (1/12). Pull the amplifier board (2/13) directly off the bayonet connectors (6).

5. Pull the header board assembly (3) off the bayonet connectors. The header board must be reinserted. Do not cut the wires (9) or remove the header board.

6. If the transmitter has linear output electronics, remove the three standoffs (4). Use a ¼-in. nut driver or wrench.

S-4

7. Align the zero and span adjust screws (10) so that the potentiometer blades are perpendicular to the board.

8. For linear output models, grip the calibration board (5) by the interface pin. For square root output modes insert a retainer screw into the threaded rivet for use as a handle. Pull out the calibration board. (Removing the calibration board disables the conventional zero and span screws.)

Insert the standoffs (7), if necessary. The transmitter is now ready to receive the plug-in smart electronics assembly.

INSTALLING THE SMART RETROFIT KIT

Installing the smart retrofit electronics kit in the transmitter requires installing plastic spacers to accommodate the retrofit kit and securing the retrofit electronics. After the retrofit kit has been installed, it is necessary to attach eyelets to the terminal side of the transmitter. The eyelets enable hook-up with a HART-based communicator (see Figure C-2).

Use proper earth grounding techniques when handling the smart electronics assembly. The smart electronics assembly is potentially sensitive to electric static discharge.

FIGURE C-2. Spacer Assembly.

1. Slide the bottom half of one spacer over one of the rows of bayonet connectors. Then repeat the procedure for the other row.

2. Align the header board with the bayonet connector pins, and slide the header board halfway down the pins.

3. Align the tops of both spacers with the bayonet connector pins, and slide them down the pins, pushing firmly on both the spacers and the header board to seat the board.

- 4. Align the smart electronics assembly with the bayonet connector pins, making sure all pins line up with the proper receptacles. Next push the assembly slowly inward until it is fully seated.
- 5. Tighten the three captive screws on the smart electronics assembly to secure it in place.
- 6. Attach the electronics cover provided in the smart retrofit kit, and tighten securely.
- 7. Remove the cover from the terminal side of the transmitter.

Two eyelets that fit under the + and - signal terminal screws are provided to facilitate connections to HART-based communicator. The signal terminal is the upper block as indicated on the transmitter housing.

- 8. Remove the signal terminal + and screws. Attach an eyelet to each screw, and reinsert the screws.
- 9. Reattach the cover on the terminal side, and tighten securely.

CHARACTERIZATION

The transmitter is now ready to be characterized. Characterization is a one-time calibration of the sensor in the Model PX750 Transmitter. During characterization, known pressures are applied to the sensor, and corresponding digital values are stored in the EEPROM located in the smart transmitter electronics. The microprocessor uses these values to make linearization corrections. The digital-to-analog converter then converts the corrected digital signal into a 4-20 mA dc output. The Model PX750 Transmitter will stay in high alarm (approximately 22 mA output) until the characterization sequence is completed.

NOTE

The transmitter must be re-characterized if either the sensor module or the smart transmitter electronics are repaired or replaced.

Before Characterizing the Transmitter

Characterizing with a Model 275 Communicator

- Be prepared to answer the following questions: Module type? Module range? Pressure units on your pressure source? Serial number?
- 2. Connect the pressure source.
- 3. Remove the terminal side cover of the Model PX750 Smart Pressure Transmitter.
- 4. Connect power supply leads to the terminal block. Apply power to the transmitter.

NOTE

Failure to use accurate equipment may result in a transmitter that Cannot meet its accuracy specification.

- 1. Connect the Model HC275 Hart communicator electrical connections to the SIGNAL terminal block. The Model HC275 connections are not polarity sensitive.
- 2. Turn the Model HC275 on by pushing the I/O button.
- 3. Follow the HC275 menus to characterize:
 - Device setup
 - Detailed setup
 - Sensor
 - Pressure sensor
 - Sensor service
 - Characterize
- 4. Follow the instructions on the screen.
- 5. Verify the new transmitter configuration:
 - Tag
 - Range points
 - Linear/square root
 - Damping
- 6. Verify that the Fail Safe Mode Switch and the Transmitter Security Switch on the smart electronics circuit board are correct.
- 7. Attach the electronics cover and tighten.
- 8. Put the transmitter back in service.

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of 13 months from date of purchase. OMEGA Warranty adds an additional one (1) month grace period to the normal one (1) year product warranty to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components which wear are not warranted, including but not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a "Basic Component" under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY / DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS / INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR WARRANTY RETURNS,

please have the following information available BEFORE contacting OMEGA:

- 1. Purchase Order number under which the product was PURCHASED,
- 2. Model and serial number of the product under warranty, and
- 3. Repair instructions and/or specific
- problems relative to the product.

FOR **NON-WARRANTY** REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:

- 1. Purchase Order number to cover the COST of the repair,
- 2. Model and serial number of the product, and
- 3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

Where Do I Find Everything I Need for Process Measurement and Control? OMEGA...Of Course!

TEMPERATURE

- $\sqrt{}$ Thermocouple, RTD & Thermistor Probes, Connectors, Panels & Assemblies
- $\sqrt{}$ Wire: Thermocouple, RTD & Thermistor
- $\sqrt{}$ Calibrators & Ice Point References
- $\sqrt{}$ Recorders, Controllers & Process Monitors

PRESSURE, STRAIN AND FORCE

- $\sqrt{}$ Transducers & Strain Gauges
- $\sqrt{}$ Load Cells & Pressure Gauges
- $\sqrt{}$ Displacement Transducers
- $\sqrt{}$ Instrumentation & Accessories

FLOW/LEVEL

- $\sqrt{}$ Rotameters, Gas Mass Flowmeters & Flow Computers
- $\sqrt{}$ Air Velocity Indicators
- $\sqrt{}$ Turbine/Paddlewheel Systems
- $\sqrt{}$ Totalizers & Batch Controllers

pH/CONDUCTIVITY

- $\sqrt{}$ pH Electrodes, Testers & Accessories
- $\sqrt{}$ Benchtop/Laboratory Meters
- $\sqrt{}$ Controllers, Calibrators, Simulators & Pumps
- $\sqrt{}$ Industrial pH & Conductivity Equipment

DATA ACQUISITION

- $\sqrt{}$ Data Acquisition & Engineering Software
- $\sqrt{}$ Communications-Based Acquisition Systems
- $\sqrt{}$ Plug-in Cards for Apple, IBM & Compatibles
- √ Datalogging Systems
- $\sqrt{}$ Recorders, Printers & Plotters

HEATERS

- $\sqrt{}$ Heating Cable
- $\sqrt{}$ Cartridge & Strip Heaters
- $\sqrt{}$ Immersion & Band Heaters
- $\sqrt{}$ Flexible Heaters
- $\sqrt{}$ Laboratory Heaters

ENVIRONMENTAL MONITORING AND CONTROL

- $\sqrt{}$ Metering & Control Instrumentation
- ✓ Refractometers
- $\sqrt{10}$ Pumps & Tubing
- $\sqrt{}$ Air, Soil & Water Monitors
- $\sqrt{}$ Industrial Water & Wastewater Treatment
- $\sqrt{}$ pH, Conductivity & Dissolved Oxygen Instruments
