SmartMod +l-10V Analog Input Module HE359ADC107 I HE359ADC207 16-Bit Resolution

## 1 SPECIFICATIONS

|  |  | ADC207 |  | ADC107 | ADC207 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Number of Channels |  | 8 | Conversion Time (PLC Update Rate) | Determined by Communications w/OCS |  |
| Input Ranges | +/-10V |  | Terminal Type | Screw Type, Removable |  |
| Resolution | Approximately 16-Bit |  | Storage Temp. | $-40^{\circ}$ to $85^{\circ}$ Celsius |  |
| Input Impedance | 1MOhm |  | Operating Temp. | $-10^{\circ}$ to $60^{\circ}$ Celsius |  |
|  |  |  | Relative Humidity | 5 to 95\% Non-condensing |  |
| Linearity | +/-0.1\% |  | Dimensions WxHxD | $\begin{gathered} 17.5 \mathrm{~mm} \times 100 \mathrm{~mm} \times 120 \mathrm{~mm} \\ 0.69^{\prime \prime} \times 3.94^{\prime \prime} \times 4.72^{\prime \prime} \\ \hline \end{gathered}$ |  |
| External Power Supply Voltage | 10-30Vdc |  | Weight | 150g (6 oz.) |  |
| Required Power (Steady State) | 30mA @ 24Vdc, typical |  | Communications | Modbus/RTU (binary) RS-485 half duplex |  |
| Required Power (Inrush) | Negligible |  | Default Comms. Parameters | 38400 baud, N, 8, 1, no h/s Default Modbus ID 1 |  |
| Isolation | 2000Vac for 60 seconds (Input/Power \& Input/Comms) |  | Supported Modbus Commands | 1,2,3,4,5,6,8,15,16 |  |
| CE \& UL Compliance |  | See Compliance Table at http://www.heapg.com/Support/compliance.htm |  |  |  |

Dimensions in inches are $0.69^{\prime \prime} \mathrm{W} \times 3.95^{\prime \prime} \mathrm{H} \times 4.72^{\prime \prime} \mathrm{D}$
Note: Number of I/O terminal connections vary from model to model

## WIRING - DC IN

## Notes:

Both ends of the RS-485 network should be terminated with a $100 \mathrm{ohm}, 1 / 4 \mathrm{~W}, 1 \%$ resistor. Many OCS controllers feature dip switches or jumpers which enable appropriate termination if the OCS is located on a network end..

## Init Default Setup:

1. Install jumper between INIT and GND terminals of the RS-485 port.
2. Apply power to Smartmod unit.
3. Read parameter words to see current parameters.
4. Write changes if necessary.

## The INIT Default RS485 Settings Are:

Modbus ID = 1
Baud rate $=9600$
Parity = None
Stop Bits = 1

## 3 CONFIGURATION DATA

SmartMod Configuration settings are mapped into Modbus Register space. This configuration data may be modified with any Modbus/RTU Master device. For convenience, Horner APG has developed a variety of Cscape application files which allow an OCS (Xle, NX, LX, QX) to act as a SmartMod configurator. Initial configuration of SmartMod module should be done on an individual basis, since all modules come from the factory with a default Modbus ID of 1 . Once each module on the network has its own unique Modbus ID, further configuration adjustments can be made with the entire network powered.

All configuration parameters listed below (except 40012 Channel Enable) are stored in EPROM. That means they should not be constantly rewritten.

| Configuration Parameters - Registers 40001 through 40013 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus <br> Register | Description | Min | Max | Default |  |  |
| $40001-40005$ | Reserved |  |  |  |  |  |
| 40006 | Communications Parameters | See Table |  | $38.4 \mathrm{kbaud}, \mathrm{N}, 8,1$, RTU Mode |  |  |
| 40007 | Modbus ID | 1 | 255 | 1 |  |  |
| 40008 | Rx/Tx Delay (in 2mS steps) | 0 | 255 | 0 mS |  |  |
| 40009 | Watchdog Timer (in 0.5s steps) | 0 | 255 | 10 (5s) |  |  |
| 40010 | Modbus Coil Data | Not Configuration Data - See I/O Data |  |  |  |  |
| 40011 | Input Type | 4 | 4 | $4(+/-10 \mathrm{~V})$ |  |  |
| 40012 | Channel Enable | See Table |  |  |  | 255 (Channels 1-8 enabled) |
| 40013 | Reserved |  |  |  |  |  |

| Register 40012 (Channel Enable) Bit Definition |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Bit 8-15 | Bits 7 | Bit 6 | Bit 5 | Bit 4 | Bit 3 | Bit 2 | Bit 1 | Bit 0 |  |
| Unused | Input 7 | Input 6 | Input 5 | Input 4 | Input 3 | Input 2 | Input 1 | Input 0 |  |
|  | 0 = Disable Input |  |  |  |  |  |  |  |  |
|  | 1 = Enable Input |  |  |  |  |  |  |  |  |

## 4 INPUT / OUTPUT DATA

SmartMod Analog I/O utilizes both Modbus Registers (40001-40030) and Coils (1-11). It is possible to access all data using Registers only, because the Coils can be accessed through Register 40010.

The following tables lists all Modbus I/O data available.

| I/O Register Data (Registers 40014-40022) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus <br> Register | Description | Access | Minimum | Maximum | Units |
| 40010 | Mirror of Coil Data | Read/Write | n/a | n/a | n/a |
| 40014 | Cold Junction Temperature | Read-only | -1000 | 6000 | 0.01 degrees C |
| 40015 | Input 0 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40016 | Input 1 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40017 | Input 2 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40018 | Input 3 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40019 | Input 4 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40020 | Input 5 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40021 | Input 6 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |
| 40022 | Input 7 | Read-only | -10000 | 10000 | $1 \mathrm{mV}(0.001 \mathrm{~V})$ |

| Modbus <br> Coil | Description | Access |
| :---: | :---: | :---: |
| 00001 | Open Detect Input 0 | Read/Write |
| 00002 | Open Detect Input 1 | Read/Write |
| 00003 | Open Detect Input 2 | Read/Write |
| 00004 | Open Detect Input 3 | Read/Write |
| 00005 | Open Detect Input 4 | Read/Write |
| 00006 | Open Detect Input 5 | Read/Write |
| 00007 | Open Detect Input 6 | Read/Write |
| 00008 | Open Detect Input 7 | Read/Write |
| 00009 | Watchdog Enabled | Read/Write |
| 00010 | Watchdog Event | Read/Write |
| 00011 | Power-up Event | Read/Write |

## Watchdog Event \& Power-up Event Operation

If Coil 9 (Watchdog Enabled) is set, Coil 10 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40009. When set, Coil 10 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 11) is set every time the power is applied. It can be cleared by the controller if desired.

## 5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.
a. All applicable codes and standards should be followed in the installation of this product.
b. Shielded, twisted-pair wiring should be used for best performance.
c. Shields may be terminated at the module terminal strip.
d. In severe applications, shields should be tied directly to the ground block within the panel.
e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the Additional References section in this document.)

When found on the product, the following symbols specify:

Warning: Electrical Shock Hazard.

## WIRING - DC IN

## Notes:

Both ends of the RS-485 network should be terminated with a 100 Ohms, 1/4W, 1\% resistor. Many OCS controllers feature dip switches or jumpers which enable appropriate termination if the OCS is located on a network end..

## Init Default Setup:

1. Install jumper between INIT and GND terminals of the RS-485 port.
2. Apply power to Smartmod unit.
3. Read parameter words to see current parameters.
4. Write changes if necessary.

The INIT Default RS485 Settings Are:
Modbus ID = 1
Baud rate $=9600$
Parity = None
Stop Bits $=1$

## 3 CONFIGURATION DATA

SmartMod Configuration settings are mapped into Modbus Register space. This configuration data may be modified with any Modbus/RTU Master device. For convenience, Horner APG has developed a variety of Cscape application files which allow an OCS (XIe, NX, LX, QX) to act as a SmartMod configurator. Initial configuration of SmartMod module should be done on an individual basis, since all modules come from the factory with a default Modbus ID of 1. Once each module on the network has its own unique Modbus ID, further configuration adjustments can be made with the entire network powered.

All configuration parameters listed below (except 40012 Channel Enable) are stored in EPROM. That means they should not be constantly rewritten.

| Configuration Parameters - Registers 40001 through 40013 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |

|  | 1 = Enable Input |  |  |  |  |  |  |  |

## 4 INPUT I OUTPUT DATA

SmartMod Analog I/O utilizes both Modbus Registers (40001-40030) and Coils (1-11). It is possible to access all data using Registers only, because the Coils can be accessed through Register 40010.

The following tables lists all Modbus I/O data available.

| I/O Register Data (Registers 40014-40022) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus <br> Register | Description | Access | Minimum | Maximum | Units |
| 40010 | Mirror of Coil Data | Read/Write | n/a | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |
| 40014 | Cold Junction Temperature | Read-only | -1000 | 6000 | 0.01 degrees C |
| 40015 | Input 0 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40016 | Input 1 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40017 | Input 2 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40018 | Input 3 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40019 | Input 4 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40020 | Input 5 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40021 | Input 6 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |
| 40022 | Input 7 | Read-only | -20000 | +20000 | $1 \mu \mathrm{~A}(0.001 \mathrm{~mA})$ |

| Modbus <br> Coil | Description | Access |
| :---: | :---: | :---: |
| 00001 | Open Detect Input 0 | Read/Write |
| 00002 | Open Detect Input 1 | Read/Write |
| 00003 | Open Detect Input 2 | Read/Write |
| 00004 | Open Detect Input 3 | Read/Write |
| 00005 | Open Detect Input 4 | Read/Write |
| 00006 | Open Detect Input 5 | Read/Write |
| 00007 | Open Detect Input 6 | Read/Write |
| 00008 | Open Detect Input 7 | Read/Write |
| 00009 | Watchdog Enabled | Read/Write |
| 00010 | Watchdog Event | Read/Write |
| 00011 | Power-up Event | Read/Write |

## Watchdog Event \& Power-up Event Operation

If Coil 9 (Watchdog Enabled) is set, Coil 10 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40009. When set, Coil 10 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 11) is set every time the power is applied. It can be cleared by the controller if desired.

## 5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.
a. All applicable codes and standards should be followed in the installation of this product.
b. Shielded, twisted-pair wiring should be used for best performance.
c. Shields may be terminated at the module terminal strip.
d. In severe applications, shields should be tied directly to the ground block within the panel.
e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller being used. (See the Additional References section in this document.)

When found on the product, the following symbols specify:

Warning: Consult user documentation.

Warning: Electrical Shock Hazard.

## 4 INPUT / OUTPUT DATA

SmartMod Analog I/O utilizes both Modbus Registers (40001-40030) and Coils (1-11). It is possible to access all data using Registers only, because the Coils can be accessed through Register 40010.

The following tables lists all Modbus I/O data available.

| I/O Register Data (Registers 40010-40026) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus <br> Register | Description | Access | Minimum | Maximum | Units |  |
| 40010 | Mirror of Coil Data | Read/Write | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ | $\mathrm{n} / \mathrm{a}$ |  |
| 40015 | Output 0 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40016 | Output 1 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40017 | Output 2 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40018 | Output 3 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| $40019-40022$ | Reserved |  |  |  |  |  |
| 40023 | Default/Safe Value Out 0 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40024 | Default/Safe Value Out 1 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40025 | Default/Safe Value Out 2 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |
| 40026 | Default/Safe Value Out 3 | Read/Write | 0 | 20000 | 1 uA or 1mV |  |

| Modbus <br> Coil | Description | Access |
| :---: | :---: | :---: |
| 00009 | Watchdog Enabled | Read/Write |
| 00010 | Watchdog Event | Read/Write |
| 00011 | Power-up Event | Read/Write |

| Modbus <br> Register | Description | Access |
| :---: | :---: | :---: |
| 40010 bit 0 | Watchdog Enabled | Read/Write |
| 40010 bit 1 | Watchdog Event | Read/Write |
| 40010 bit 2 | Power-up Event | Read/Write |

## Watchdog Event \& Power-up Event Operation

If Coil 9 (Watchdog Enabled) is set, Coil 10 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40009. When set, Coil 10 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 11) is set every time the power is applied. It can be cleared by the controller if desired.

## 5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.
a. All applicable codes and standards should be followed in the installation of this product.
b. Shielded, twisted-pair wiring should be used for best performance.
c. Shields may be terminated at the module terminal strip.
d. In severe applications, shields should be tied directly to the ground block within the panel.
e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the Additional References section in this document.)

When found on the product, the following symbols specify:

Warning: Consult user documentation.

Warning: Electrical Shock Hazard.
Warning. Electrical Shock Hazard.

Information is subject to change without notice.

## 6 TECHNICAL SUPPORT

For assistance and manual up-dates, contact Technical Support at the following locations:
Helpdesk: http://www.horner-apg.com/helpdesk

## North America:

(317) 916-4274
www.heapg.com

## Europe:

| 14 | GNA |  |
| 15 | V | OUT 7 |
| 16 | GNA |  |

## WIRING - DC IN

## Notes:

Both ends of the RS-485 network should be terminated with a $100 \mathrm{ohm}, 1 / 4 \mathrm{~W}, 1 \%$ resistor. Many OCS controllers feature dip switches or jumpers which enable appropriate termination if the OCS is located on a network end..

## Init Default Setup:

1. Install jumper between INIT and GND terminals of the RS-485 port.
2. Apply power to Smartmod unit.
3. Read parameter words to see current parameters.
4. Write changes if necessary.

| D. | A | $\oslash$ |  |
| :---: | :---: | :---: | :---: |
| D+ | в | $\oslash$ |  |
| GND | c | $\oslash$ |  |
| INIT | D | $\oslash$ | $\checkmark$ |

The INIT Default RS485 Settings Are:
Modbus ID = 1
Baud rate $=9600$
Parity = None
Stop Bits = 1

## 3 CONFIGURATION DATA

SmartMod Configuration settings are mapped into Modbus Register space. This configuration data may be modified with any Modbus/RTU Master device. For convenience, Horner APG has developed a variety of Cscape application files which allow an OCS (XIe, NX, LX, QX) to act as a SmartMod configurator. Initial configuration of SmartMod module should be done on an individual basis, since all modules come from the factory with a default Modbus ID of 1. Once each module on the network has its own unique Modbus ID, further configuration adjustments can be made with the entire network powered.

All configuration parameters listed below (except 40012 Channel Enable) are stored in EPROM. That means they should not be constantly rewritten.

| Configuration Parameters - Registers 40001 through 40013 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Modbus Register | Description | Min | Max | Default |

## WIRING - RS-485

## WIRING - DC IN

## Notes:

Both ends of the RS-485 network should be terminated with a $100 \mathrm{hm}, 1 / 4 \mathrm{~W}, 1 \%$ resistor. Many OCS controllers feature dip switches or jumpers which enable appropriate termination if the OCS is located on a network end.

## Init Default Setup:

1. Install jumper between INIT and GND terminals of the RS-485 port.
2. Apply power to Smartmod unit.
3. Read parameter words to see current parameters.
4. Write changes if necessary.

The INIT Default RS485 Settings Are:
Modbus ID = 1
Baud rate $=9600$
Parity = None
Stop Bits = 1

## 3 CONFIGURATION DATA

SmartMod Configuration settings are mapped into Modbus Register space. This configuration data may be modified with any Modbus/RTU Master device. For convenience, Horner APG has developed a variety of Cscape application files which allow an OCS (XLe, NX, LX, QX) to act as a SmartMod configurator. Initial configuration of SmartMod module should be done on an individual basis, since all modules come from the factory with a default Modbus ID of 1. Once each module on the network has its own unique Modbus ID, further configuration adjustments can be made with the entire network powered.

All configuration parameters are stored in EPROM. That means they should not be constantly rewritten.

## 4 INPUT I OUTPUT DATA

SmartMod Digital I/O data utilizes both Modbus Registers (40009-40011) and Coils (1-35). It is possible to access all data using Registers only, because the Coils data can be accessed through Registers.

The following tables lists all Modbus I/O data available.

| I/O Register Data (Registers 40009-40011) |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus <br> Register | Description | Access | Bits 4- <br> $\mathbf{1 5}$ | Bit 12 | Bit 11 | Bit 10 | Bit 9 |
| 40009 | Mirror of Input Coil Data | Read-only | unused | In 3 | In 2 | In 1 | In 0 |
| 40010 | Mirror of Output Data | Read/Write | unused | Out 3 | Out 2 | Out 1 | Out 0 |
| 40011 | Mirror of WatchDog Data | Read/Write | unused | PwrUp <br> Event | W.D.* <br> Event | W.D.* <br> Enbld |  |

| Modbus <br> Coil | Description | Access |
| :---: | :---: | :---: |
| 00001 | Input 0 | Read-only |
| 00002 | Input 1 | Read-only |
| 00003 | Input 2 | Read-only |
| 00004 | Input 3 | Read-only |
| $0005-00016$ | Reserved |  |
| 00017 | Output 0 | Read/Write |
| 00018 | Output 1 | Read/Write |
| 00019 | Output 2 | Read/Write |
| 00020 | Output 3 | Read/Write |
| $00021-00032$ | Reserved |  |
| 00033 | Watchdog Enabled | Read/Write |
| 00034 | Watchdog Event | Read/Write |
| 00035 | Power-up Event | Read/Write |

## Watchdog Event \& Power-up Event Operation

If Coil 33 (Watchdog Enabled) is set, Coil 34 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40013. When set, Coil 34 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 35) is set every time the power is applied. It can be cleared by the controller if desired.

## 5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.
a. All applicable codes and standards should be followed in the installation of this product.
b. Shielded, twisted-pair wiring should be used for best performance.
c. Shields may be terminated at the module terminal strip.
d. In severe applications, shields should be tied directly to the ground block within the panel.
e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the Additional References section in this document.)

When found on the product, the following symbols specify:

Warning: Consult user documentation.

Warning: Electrical Shock Hazard.

## 4 INPUT I OUTPUT DATA

SmartMod Analog I/O utilizes both Modbus Registers (40001-40030) and Coils (1-11). It is possible to access all data using Registers only, because the Coils can be accessed through Register 40010.

The following tables lists all Modbus I/O data available.

| I/O Register Data (Registers 40014-40022) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Modbus Register | Description | Access | Minimum | Maximum | Units |
| 40010 | Mirror of Coil Data | Read/Write | n/a | n/a | n/a |
| 40014 | Cold Junction Temperature | Read-only | -1000 | 6000 | 0.01 degrees C |
| 40015 | Input 0 | Read-only | Depends on Input Type | Depends on Input Type | 0.1 C or 0.001 mV |
| 40016 | Input 1 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40017 | Input 2 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40018 | Input 3 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40019 | Input 4 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40020 | Input 5 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40021 | Input 6 | Read-only |  |  | 0.1 C or 0.001 mV |
| 40022 | Input 7 | Read-only |  |  | 0.1 C or 0.001 mV |

| Modbus <br> Coil | Description | Access |
| :---: | :---: | :---: |
| 00001 | Open Detect Input 0 | Read/Write |
| 00002 | Open Detect Input 1 | Read/Write |
| 00003 | Open Detect Input 2 | Read/Write |
| 00004 | Open Detect Input 3 | Read/Write |
| 00005 | Open Detect Input 4 | Read/Write |
| 00006 | Open Detect Input 5 | Read/Write |
| 00007 | Open Detect Input 6 | Read/Write |
| 00008 | Open Detect Input 7 | Read/Write |
| 00009 | Watchdog Enabled | Read/Write |
| 00010 | Watchdog Event | Read/Write |
| 00011 | Power-up Event | Read/Write |

## Watchdog Event \& Power-up Event Operation

If Coil 9 (Watchdog Enabled) is set, Coil 10 (Watchdog Event) will set if the Watchdog Timeout value is exceeded. The Watchdog Timeout value is set in Register 40009. When set, Coil 10 can be reset by the controller when normal communications resumes.

The Power-up Event (Coil 11) is set every time the power is applied. It can be cleared by the controller if desired.

## 5 INSTALLATION / SAFETY

Warning: Remove power from the OCS controller, CAN port, and any peripheral equipment connected to this local system before adding or replacing this or any module.
a. All applicable codes and standards should be followed in the installation of this product.
b. Shielded, twisted-pair wiring should be used for best performance.
c. Shields may be terminated at the module terminal strip.
d. In severe applications, shields should be tied directly to the ground block within the panel.
e. Use the following wire type or equivalent: Belden 8441.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the Additional
References section in this document.)
When found on the product, the following symbols specify:

Warning: Consult user documentation.

Warning: Electrical Shock Hazard.
$\qquad$

## 3 NETWORK CABLE

For detailed wiring information, refer to the Control Station Hardware Manual. A handy checklist is provided that covers panel box layout requirements and minimum clearances. See Section 10 for our web address.

|  |  | Pin | Description | Recommended Cable |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | RED | 1 | V+ | Thick: | Belden 3082A |
| 0 | WHT | 2 | CAN_H | $($ Max Distance $=$ |  |
| 0 | NC | 3 | No Connection | 500m) |  |
| 0 | BLU | 4 | CAN_L | Thin: | Belden 3084A |
| 0 | BLK | 5 | V- | $\begin{aligned} & (\text { Max Distance }= \\ & 100 \mathrm{~m}) \end{aligned}$ |  |

## 4 ID SWITCHES (SETTING CSCAN NETWORK IDs)

CsCAN Network IDs are set using the hexadecimal number system from 01 to FD. The decimal equivalent is 1-253. Refer to Section 8 , which shows the decimal equivalent of hexadecimal numbers. Set a unique Network ID by inserting a small Phillips screwdriver into the two identical switches. Note: The CsCAN Baud Rate for SmartStix I/O is fixed at 125KBaud

## 5 LEDs

a. Diagnostic LED Indicators

| Diagnostic LED | State | Meaning |
| :--- | :--- | :---: |
| MS: (indicates fault status of <br> Module ) | Solid Red | RAM or ROM test failed |
|  | Blinking Red | I/O test failed |
|  | Blinking Green | Module is in power-up state |
|  | Solid Green | Module is running normally |
| NS: (indicates fault status of <br> Network) | Solid Red | Network Ack or Dup ID test failed |
|  | Blinking Red | Network ID test failed |
|  | Blinking Green | Module is in Life Expectancy default |
| state |  |  |

## b. Status LED Indicators

The Power Status LED illuminates Red when power is applied to the module. There are I/O Status LED indicators for each of the Digital I/O points, which illuminate Red when an I/O point is ON.

6 WIRING
a. 16 DC IN, Positive Logic / Negative Logic

| DIM610 Specifications |  |  |  |
| :---: | :---: | :---: | :---: |
| Number of input points | 16 | OFF to ON Response | $0-3 \mathrm{~ms}$. or less |
| Rated Input Current | 7 mA | ON to OFF Response | 0-3ms. or less |
| ON Voltage Level | 19VDC or less | Common Terminal | 16 points / COM |
| OFF Voltage Level | 6VDC or less | Operating Indicator | LED turns on during ON state of input |
| Input Characteristics | Bidirectional Photo Coupler | External Connections | $\begin{aligned} & \text { Terminal block } \\ & \text { connector (M3 } \times 6 \\ & \text { screws) } \end{aligned}$ |
| Isolation Method |  |  |  |
| Rated Voltage | 11-25 VDC | Altitude for use | Up to $2,000 \mathrm{~m}$ |
| Internal power Consumption (mA) | 200 mA | Weight | 5.6 oz. (159 g) |

## b. 32VDC IN, Positive Logic / Negative Logic

| DIM710 INPUTS |  |  |  |
| :---: | :---: | :---: | :---: |
| Number of input points | 32 | OFF to ON Response | 0-3ms. or less |
| Rated Input Current | 7 mA | ON to OFF Response | $0-3 \mathrm{~ms}$. or less |
| ON Voltage Level | 19VDC or less | Common Terminal | 16 points / COM |
| OFF Voltage Level | 6 VDC or less | Operating Indicator | LED turns on during ON state of input |
| Isolation Method | Photo Coupler |  |  |
| Input Characteristics | Bidirectional | External Connections | Terminal block connector (M3 x 6 screws) |
| Rated Voltage | 11 -25 VDC | Weight | 8.360z. (237 g) |
| Internal power Consumption (mA) | 300 |  |  |

## 9 INSTALLATION / SAFETY

a. All applicable codes and standards need to be followed in the installation of this product.
b. For I/O wiring (discrete), use the following wire type or equivalent: Belden 8441 or equivalent
c. For detailed installation information, refer to Chapter Two in the Control Station Hardware Manual (MAN0227). A handy checklist is provided that covers panel box layout requirements and minimum clearances.

Warning: Consult user documentation.

Warning: To protect the module and associated wiring from load faults, use external fuse (5 A).

Warning: Connecting high voltage to any I/O pin may cause high voltage to appear at other I/O pins.

Warning: Wiring the line side of the AC source to loads connected to outputs 0 through 15 and the neutral side of the AC source to the output common(s) would create a Negative Logic condition, which may be considered an unsafe practice.

10

ID SWITCHES (SETTING CSCAN NETWORK IDs)

CsCAN Network IDs are set using the hexadecimal number system from 01 to FD. The decimal equivalent is $1-253$. Refer to Section 8 , which shows the decimal equivalent of hexadecimal numbers. Set a unique Network ID by inserting a small Phillips screwdriver into the two identical switches. Note: The CsCAN Baud Rate for SmartStix I/O is fixed at 125 KBaud .

## 5 LEDs

a. Diagnostic LED Indicators

| Diagnostic LED | State | Meaning |
| :--- | :--- | :---: |
| MS: (indicates fault <br> status of Module ) | Solid Red | RAM or ROM test failed |
|  | Blinking Red | I/O test failed |
|  | Blinking Green | Module is in power-up state |
|  | Solid Green | Module is running normally |
| NS: (indicates fault <br> status of Network) | Solid Red | Network Ack or Dup ID test failed |
|  | Blinking Red | Network ID test failed |
|  | Blinking Green | Module is in Life Expectancy default state |
|  | Solid Green | Network is running normally |

## b. Status LED Indicators

The Power Status LED illuminates Red when power is applied to the module. There are I/O Status LED indicators for each of the Digital I/O points, which illuminate Red when an I/O point is ON.

INSTALLATION / SAFETY
a. All applicable codes and standards need to be followed in the installation of this product.
b. For I/O wiring (discrete), use the following wire type or equivalent: Belden 8441 or equivalent
c. For detailed installation information, refer to Chapter Two in the Control Station Hardware Manual (MAN0227). A handy checklist is provided that covers panel box layout requirements and minimum clearances.

Warning: Consult user
documentation

Warning: To protect the module and associated wiring from load faults, use external fuse (5 A)
Warning: Connecting high voltage to any I/O pin may cause high voltage to appear at other I/O pins.
Warning: Wiring the line side of the AC source to loads connected to outputs 0 through 15 and the neutral side of the AC source to the output common(s) would create a Negative Logic condition, which may be considered an unsafe practice.

10

NETWORK CABLE
For detailed wiring information, refer to the Control Station Hardware Manual. A handy checklist is provided that covers panel box layout requirements and minimum clearances. See Section 10 for our web address.

|  |  | Pin | Description | Recommended Cable |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Q | RED | 1 | V+ | Thick: |  |
| $\theta$ | WHT | 2 | CAN_H | (Max Distance $=$ | Belden 3082A |
| Q | NC | 3 | No Connection | 500m) |  |
| 0 | BLU | 4 | CAN_L | Thin: |  |
| 0 | BLK | 5 | V- | $\begin{aligned} & (\text { Max Distance }= \\ & 100 \mathrm{~m}) \end{aligned}$ | Belden 3084A |

4 ID SWITCHES (SETTING CSCAN NETWORK IDs)
CsCAN Network IDs are set using the hexadecimal number system from 01 to FD. The decimal equivalent is 1-253. Refer to Section 8, which shows the decimal equivalent of hexadecimal numbers. Set a unique Network ID by inserting a small Phillips screwdriver into the two identical switches. Note: The CsCAN Baud Rate for SmartStix I/O is fixed at 125KBaud

5
LEDs
a. Diagnostic LED Indicators

| Diagnostic LED | State | Meaning |
| :--- | :--- | :---: |
| MS: (indicates fault status of <br> Module ) | Solid Red | RAM or ROM test failed |
|  | Blinking Red | I/O test failed |
|  | Blinking Green | Module is in power-up state |
|  | Solid Green | Module is running normally |
| NS: (indicates fault status of <br> Network) | Solid Red | Network Ack or Dup ID test failed |
|  | Blinking Red | Network ID test failed |
|  | Blinking Green | Module is in Life Expectancy default |
| state |  |  |

## b. Status LED Indicators

The Power Status LED illuminates Red when power is applied to the module. There are I/O Status LED indicators for each of the Digital I/O points, which illuminate Red when an I/O point is ON.

4 ID SWITCHES (SETTING CSCAN NETWORK IDs)
CsCAN Network IDs are set using the hexadecimal number system from 01 to FD. The decimal equivalent is $1-253$. Refer to Section 8, which shows the decimal equivalent of hexadecimal numbers. Set a unique Network ID by inserting a small Phillips screwdriver into the two identical switches. Note: The CsCAN Baud Rate for SmartStix I/O is fixed at 125KBaud

5 LEDs
a. Diagnostic LED Indicators

| Diagnostic LED | State | Meaning |
| :--- | :--- | :---: |
| MS: (indicates fault status of <br> Module ) | Solid Red | RAM or ROM test failed |
|  | Blinking Red | I/O test failed |
|  | Blinking Green | Module is in power-up state |
|  | Solid Green | Module is running normally |
| NS: (indicates fault status of <br> Network) | Solid Red | Network Ack or Dup ID test failed |
|  | Blinking Red | Network ID test failed |
|  | Blinking Green | Module is in Life Expectancy default |
| state |  |  |
|  | Solid Green | Network is running normally |

## b. Status LED Indicators

The Power Status LED illuminates Red when power is applied to the module. There are I/O Status LED indicators for each of the Digital I/O points, which illuminate Red when an I/O point is ON.

9 INSTALLATION / SAFETY
a. All applicable codes and standards need to be followed in the installation of this product.
b. For I/O wiring (discrete), use the following wire type or equivalent: Belden 8441 or equivalent.
c. For detailed installation information, refer to Chapter Two in the Contro Station Hardware Manual (MAN0227). A handy checklist is provided that covers panel box layout requirements and minimum clearances.

Warning: To protect the module and associated wiring from load faults, use external fuse (5 A).

Warning: Connecting high voltage to any I/O pin may cause high voltage to appear at other I/O pins.

Warning: Wiring the line side of the AC source to loads connected to outputs 0 through 15 and the neutral side of the AC source to the output common(s) would create a Negative Logic condition, which may be considered an unsafe practice.

10

## 4 INTERNAL WIRING

## 5 CHANNEL MODE, PROGRAMMABLE FILTER, AND OUTPUT DEFAULT CONFIGURATION

The network supplies configuration information to the HE550MIX577 in the Consumed Directed Digital Data Words sent to the HE550MIX577. In the first word, the low 12 bits, 1 through 12, are channel mode bits. A low mode bit selects $\pm 10 \mathrm{~V}$ and a high mode bit selects $\pm 20 \mathrm{~mA}$. The next three bits, 13 through 15 , are input digital filter time constant codes and the high bit, 16 , is an adaptive filter enable bit. In the second word, the low 12 bits are channel scale bits. A low scale bit selects $\pm 10 \mathrm{~V}$ or $\pm 20 \mathrm{~mA}$ for the corresponding channel. A high scale bit selects $\pm 5 \mathrm{~V}$ or $4-20 \mathrm{~mA}$. The upper four bits are unused.

| Bit | Channel |
| :---: | :---: |
| 1 | Al1 |
| 2 | Al2 |
| 3 | Al3 |
| 4 | Al4 |
| 5 | Not used |
| 6 | Not used |
| 7 | Not used |
| 8 | Not used |
| 9 | AQ1 |
| 10 | AQ2 |
| 11 | Not used |
| 12 | Not used |

Each analog input on the HE550MIX577 has a single pole 345 Hz (461uS) cutoff high frequency noise filter. In addition a second digital filter may be specified in the first configuration word with the following time constants.

| Bit |  |  |  |
| :---: | :---: | :---: | :--- |
| 15 | 14 | 13 |  |
| 0 | 0 | 0 | 10 milliseconds (Nominal hardware scan rate) |
| 0 | 0 | 1 | 15 milliseconds |
| 0 | 1 | 0 | 35 milliseconds |
| 0 | 1 | 1 | 75 milliseconds |
| 1 | 0 | 0 | 155 milliseconds |
| 1 | 0 | 1 | 315 milliseconds |
| 1 | 1 | 0 | 635 milliseconds |
| 1 | 1 | 1 | 1.275 seconds |

This digital filter is useful for applications with significant amounts of random noise. The slower time constants, while yielding better noise suppression, take a longer time to settle after step changes and are also sensitive to impulse noise which is treated like Gaussian noise and averaged.

Bit 16 of the first configuration word may be set to specify an adaptive filter algorithm that:

1. Responds much more quickly to large step changes at slower time constants with full filtering of low level noise.
2. Suppresses impulse noise at the expense of slightly slower response at the shortest time constant settings. (Approximately 10 additional milliseconds)
Note that actual system response time is network dependent.

Bits 9 through 12 of the 5th configuration word control the behavior of the analog outputs when network communication is lost. The bit to channel correspondence is the same as for the mode and scale bits. If the corresponding bit is set, the outputs hold the last state. If the corresponding bit is cleared, the outputs are set to the respective value supplied to the HE550MIX577 in the second four words of the Consumed Directed Analog Data sent by the OCS. The other bits of the 5th configuration word are unused.

Refer to SmartStix Analog Programming Guide.

## 6 INPUT AND OUTPUT CONVERSION FACTORS

The following table describes how real-world values are scaled in the controller. For a given physical voltage or current, the register data value may be calculated by using the conversion factor from the table. The following formula is used: Data = Voltage or Current I Conversion Factor

Example: $\quad$ The user selects a voltage range of $\pm 10 \mathrm{~V}$ :

1. The physical voltage is 6 Volts.
2. Using the table, the conversion factor for the voltage range of $\pm 10 \mathrm{~V}$ is .0003125 .
3. To determine the data value, the formula is used: Data $=\mathrm{V} /$ Conversion Factor

$$
19200=6 \text { VDC / } 0.0003125
$$

4. For the 4 to 20 mA range, the offset, 4 mA , must first be subtracted from the physical output value before dividing by the scale factor to yield the register data value.

| Conversion between Physical Values and Register Values |  |  |  |
| :---: | :---: | :---: | :---: |
| Selected Range | Volts / mA | Register Data | Conversion Factor |
| $\pm 5.00 \mathrm{~V}$ | > +5.11 | 32767 | 0.00015625 |
|  | +5.00 | 32000 |  |
|  | 0.00 | 0 |  |
|  | -5.00 | -32000 |  |
|  | <-5.11 | -32768 |  |
| $\pm 10.00 \mathrm{~V}$ | $>+10.23$ | 32767 | 0.0003125 |
|  | +10.00 | 32000 |  |
|  | 0.00 | 0 |  |
|  | -10.00 | -32000 |  |
|  | <-10.23 | -32768 |  |
| $4 . .20 \mathrm{~mA}$ | <+20.37 | 32767 | 0.0005 |
|  | +20.00 | 32000 |  |
|  | +4.00 | 0 |  |
|  | -12.00 | -32000 |  |
|  | $>-12.38$ | -32768 |  |
| $\pm 20.00 \mathrm{~mA}$ | $>+20.47$ | 32767 | 0.0006250 |
|  | +20.00 | 32000 |  |
|  | 0 | 0 |  |
|  | -20.00 | -32000 |  |
|  | <-20.47 | -32768 |  |

## 7 SETTING ID SWITCHES

CsCAN Network IDs are set using the hexadecimal number system from 01 to FD. The decimal equivalent is 1-253. Refer to following Conversion Table, which shows the decimal equivalent of hexadecimal numbers. Set a unique Network ID by inserting a small Phillips screwdriver into the two identical switches.

Note: The CsCAN Baud Rate for SmartStix I/O is fixed at 125KBaud

Close-up of Switches

| Decimal (Dec) to Hexadecimal (Hex) Conversion |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Dec | Hex |  | Dec | Hex |  | Dec | Hex |  | Dec |  |  | Dec | Hex |  |
|  | HI | LO |  | HI | LO |  | HI | LO |  | HI | LO |  | HI | LO |

## 8 LEDS

SmartStix I/O Modules provide diagnostic and status LED indicators.
a. Diagnostic LED Indicators

| Diagnostic LED | State | Meaning |
| :---: | :---: | :---: |
| MS <br> (Module Status) | Solid Red | Initializing |
|  | Blinking Red | I/O test failed, internal hardware fault |
|  | Blinking Green | Module is in power-up state * |
|  | Solid Green | Module is running normally |
| NS(Network Status) | Solid Red | Network Ack or Dup ID test failed ** |
|  | Blinking Red | Network ID test failed: ID not in the range of 1.. 253 |
|  | Blinking Green | Life Expectancy timeout, outputs are in default state *** |
|  | Solid Green | Network is running normally |

* If a blinking green Module Status persists for more than a few seconds the module has not received the expected configuration from the OCS. This may be due to no Network I/O configuration created in Cscape, not having downloaded the Network I/O configuration to the master OCS, an unpowered master OCS, or the wrong Network ID number set on the module's rotary switches.
** Network Ack means that no other node is active on the network. Dup ID test failed means that another node with the same ID switch setting is already on the network.
*** Life Expectancy timeout means that the module has not received a periodic message from the master OCS in the time specified in either the Life Expectancy directed data message or the Comm timeout of the Network I/O Configuration window in Cscape.

## b. Status LED Indicators

The Power Status LED illuminates Red when power is applied to the module. There are I/O Status LED indicators for each of the Digital I/O points, which illuminate Red when an I/O point is ON.

## 9 NETWORK CABLE

For detailed wiring information, refer to the applicable hardware manual listed in this datasheet under Installation/Safety. A handy checklist is provided that covers panel box layout requirements and minimum clearances.

| Q |  | Pin | Description |
| :---: | :---: | :---: | :---: |
|  |  | 1 | V+ |
| © | WHT | 2 | CAN_H |
| © | SHD | 3 | Shield |
| Q | BLU | 4 | CAN_L |
| Q | BLK | 5 | V- |

| Recommended Cable |  |
| :--- | :--- |
| Thick: $($ Max Distance $=500 \mathrm{~m})$ | Belden 3082A |
| Thin: $\quad$ (Max Distance $=100 \mathrm{~m}$ ) | Belden 3084A |

Note: 12-24VDC must be supplied to the network.

## 10 INSTALLATION / SAFETY

When found on the product, the following symbols specify:

Warning: Consult user documentation.

Warning: Electrical Shock Hazard.

WARNING: To avoid the risk of electric shock or burns, always connect the safety (or earth) ground before making any other connections.

WARNING: To reduce the risk of fire, electrical shock, or physical injury it is strongly recommended to fuse the voltage measurement inputs. Be sure to locate fuses as close to the source as possible.

WARNING: Replace fuse with the same type and rating to provide protection against risk of fire and shock hazards.

WARNING: In the event of repeated failure, do not replace the fuse again as a repeated failure indicates a defective condition that will not clear by replacing the fuse.

WARNING: Only qualified electrical personnel familiar with the construction and operation of this equipment and the hazards involved should install, adjust, operate, or service this equipment. Read and understand this manual and other applicable manuals in their entirety before proceeding. Failure to observe this precaution could result in severe bodily injury or loss of life.

For detailed installation and a handy checklist that covers panel box layout requirements and minimum clearances, refer to the hardware manual of the controller you are using. (See the Additional References section in this document.)

- All applicable codes and standards need to be followed in the installation of this product.
- For I/O wiring (discrete), use the following wire type or equivalent: Belden 8441 or equivalent.

Adhere to the following safety precautions whenever any type of connection is made to the module.

- Connect the green safety (earth) ground first before making any other connections.
- When connecting to electric circuits or pulse-initiating equipment, open their related breakers. Do not make connections to live power lines.
- Make connections to the module first; then connect to the circuit to be monitored.
- Route power wires in a safe manner in accordance with good practice and local codes.
- Wear proper personal protective equipment including safety glasses and insulated gloves when making connections to power circuits.
- Ensure hands, shoes, and floor are dry before making any connection to a power line.
- Make sure the unit is turned OFF before making connection to terminals. Make sure all circuits are de-energized before making connections.
- Before each use, inspect all cables for breaks or cracks in the insulation. Replace immediately if defective.

## 11 ADDITIONAL REFERENCES

The following table indicates the hardware manual numbers for the controller you are using. Hardware manuals contain detailed installation, configuration and other pertinent information. See the Technical Support section in this document for the web site address to download references and obtain revised editions.
