

pH ELECTRODE CARE

omega.com[®]
ΩOMEGA[®]

M0815

pH Electrodes must be kept moist! Your electrode has been shipped stored in either a soaker storage bottle or in a rubber boot. The storage solution contained in both is a potassium chloride solution. Do not be alarmed if white crystals form at the end of the electrode. It is simply the potassium chloride. Rinse with distilled water to dissolve the crystals before using the electrode.

For storage, place electrode back in the soaker bottle or rubber boot. If the potassium chloride solution evaporates or is lost, simply use pH buffer 4.0 or pH buffer 7.0 for storage. **DO NOT** use distilled or deionized water as this will drastically reduce the electrode lifespan.

If the pH electrode should dry out, soak the electrode up to 2 hours in pH buffer 4.0 solution. If the electrode is left dry for an extended period of time, permanent damage will result.
