AUTOTUNE TEMPERATURE CONTROLLER
OPERATOR'S MANUAL

Thank you for choosing the CN132... a new concept in advanced, full feature, compact temperature control. Please . . .

1. SCAN the table of contents and look through the manual. Note sections of interest.

2. REVIEW the important safety information in Section 1 before installation.

3. INSTALL & CONNECT using the instructions in Sections 4 and 5.

4. SET UP using the format you prefer...
   - Detailed step-by-step instructions (see Section 6), or...
   - Quick instructions for those familiar with micro-processor based controllers (see section 3).

UNPACKING INSTRUCTIONS

Remove the Packing List and verify that you have received all equipment. If you have any questions about the shipment, please call the OMEGA Customer Service Department at 1-800-622-2378 or (203) 359-1660.

When you receive the shipment, inspect the container and equipment for any signs of damage. Note any evidence of rough handling in transit. Immediately report any damage to the shipping agent.

NOTE: The carrier will not honor any claims unless all shipping material is saved for their examination. After examining and removing contents, save packing material and carton in the event reshipment is necessary.

SECTION 1, SAFETY

1. INSTALLATION. Designed for use:
UL870 - only in products where the acceptability is determined by Underwriters Laboratories Inc.
EN61010 - 1 within Installation Categories II and III environment and pollution degree 2.
To avoid possible shock hazard install in a grounded metal enclosure. The sensor sheath and all accessible conductive parts should be grounded. Prevent live parts from being touched. Follow wiring diagrams and the appropriate regulations.

2. CONFIGURATION:
All functions are front panel selectable. It is the responsibility of the installing engineer to ensure that the configuration is safe. Use the program lock to protect critical functions from tampering.

3. ULTIMATE SAFETY ALARMS: Normal safety advice:
Do not use SP2 as the sole alarm where personal injury or damage may be caused by equipment failure.

SYMBOLS USED IN THIS MANUAL:

IN BRIEF...

Routine adjustments:

- View setpoint
- Increase setpoint
- Decrease setpoint

To reset alarm or fault message:

- ▼ ▲ Momentarily press together
SECTION 2  FUNCTIONS MENU AND PROGRAM MODE GUIDE

1. Enter/Exit:

- 320

Program mode. Press and hold ▼ ▲ 3 sec.

2. Single level navigation:

- LEUL

- band

3. View/Change Option:

- band

View Function/Option.

- band

Autotune Option value.

- 15

4. Changing menu levels:

- LEUL

Locate level Function.

- 2

Select new level.
SECTION 3 QUICK SETUP INSTRUCTIONS

For full instructions, see Section 6.

1. Power up.

   Alternating display after self-test

2. Select input sensor.

   To select, press and hold *
   Press ▲
   Check for correct selection.

3. Select °C/°F.

   Press once...

...to select.

4. Select main setpoint output device.

   See Section 5.3.
   Press once.

5. Enter initial configuration.

   Hold both for 3 sec.

6. Select other functions now or later.
   See guide and menu in Section 2.

   Select SSR drive or 2A relay.

IMPORTANT: check that correct device is selected.

For any difficulty in initial configuration:

Press and hold ▼ ▲ 3 sec.
To display the next step, release keys together.
7. Setpoint display/adjust:
   
   ![Setpoint Display](image)
   
   **Display setpoint.**

   ![Setpoint Increase/Decrease](image)
   
   **To increase setpoint...**

   **To decrease setpoint...**

   Operational with factory PID settings.

8. To Autotune:

   ![Entry Point](image)
   
   **Enter program mode.**
   Hold both for 3 sec.

   ![Select TunE/On](image)
   
   **Entry point...**

   **Select TunE/On**

   ![Exit Program mode](image)
   
   **Exit program mode.**
   Hold both for 3 sec.

9. **For optimum cycle-time:**
   See Section 9.4.

**SECTION 4 MECHANICAL INSTALLATION**

1. Prepare a 1/32 DIN panel cutout:
   
   45.0mm ±0.6/-0 x 22.2mm ± 0.3/-0
   
   1.77" ±0.02/-0 x 0.87" ±0.01/-0

2. Unplug connector now if wiring separately.
   Unlock connector by sliding the green lock outward as shown in 4.2

3. Slide the controller into the cutout.

4. Slide the panel clamp on to the controller and press it firmly against the panel.
   **NOTE:** To remove the panel clamp, press in the two side levers.

5. Refit the connector if removed. To further secure the connector, slide the green lock inward as shown.

**4.1 CN132 CONTROLLER PROTECTION RATING**

The CN132 controller front of panel assembly is rated NEMA 4X/1P6S provided that:

- The panel is smooth, and cutout accurate
- The panel clamp is pressed firmly against the panel, ensuring that the clamp springs are fully compressed
4.2 MULTIPLE CN132 INSTALLATIONS

Spacing Guide:
- Allows clamp/connector removal
- Minimum: V 35 mm (1.38 in), H 60 mm (2.36 in)
- Allows clamp removal
  - Recommended: V 30 mm (1.18 in), H 70 mm (2.76 in)

4.3 OPTIONAL 1/16 DIN PANEL ADAPTERS

Adapter 48 mm (1.89 in) square enables CN132(s) to be mounted in a 1/16 DIN cutout.

- **1/16 DIN CN132 adapter** accepts one CN132.
  1. Remove collar/gasket from CN132, grip firmly and pull off.
  2. Assemble adapter halves either side of panel and locate pegs.
  3. Slide CN132 into adapter, fit panel clamp, and press firmly against adapter.

- **1/16 DIN CN132 Twin adapter** accepts two CN132s.
  1. Remove collars from both CN132s.
  2. Fit special collars included with twin panel clamp.
  3. Slide both CN132s into cutout. Fit twin panel clamp and press firmly against panel.

Panel adapters are not NEMA 4X/IP66 rated.
SECTION 5 ELECTRICAL INSTALLATION

CAUTION RISK OF ELECTRICAL SHOCK
1. Supply Voltage: 100-240V 50-60 Hz±10% 3VA
   12V or 24V (AC/DC)±20% 3VA Polarity not required
2. Output devices (two)
   Solid state relay drive SSD
   5Vdc +0/-15%, 10mA non-isolated
   To switch a remote SSR (or logic)
   Miniature power relay [LY]
   2A/250V– resistive, Form A/SPST contacts
3. Output device allocation:
   Either the SSD or the relay may be chosen as the output device for the main setpoint SP1. The remaining device is automatically allocated to the second setpoint SP2.
   Choose the most suitable output device arrangement for the application, and wire accordingly.
4. Wiring the 8-way connector:
   Maximum recommended wire: 32/0.2 mm 1.0 mm²
   (18AWG 0.04"). Prepare cables carefully, avoid bridging and excessive cable strain on the connector.
5. Switching inductive loads with the relay:
   To prolong contact life and suppress interference, it is good engineering practice to fit a snubber (0.1μF/100Ω).
   See Example B.

CAUTION: Snubber leakage current can cause some electro-mechanical devices to be held ON. Check manufacturer’s specification.

Example A
The SSD output is allocated to SP1 and wired to switch the load (heater) using an SSR.

Example B
The relay output is allocated to SP1 and wired to switch the load (heater) using a contactor.

NOTE: for optional 12 or 24V ac/dc models use terminals 7 & 8. Polarity not required.
SECTION 6  INITIAL SET UP

6.1 OVERVIEW
Follow three steps from initial power-up to accurately tuned control.

1. Gather details for initial configuration:
   1. The temperature sensor being used (thermocouple or RTD/Pt100)
   2. °C or °F
   3. Choice of controller output device for the main setpoint SP1, either:
      - Solid state relay
      - Miniature power relay
   4. Select any additional controller functions, e.g., SP2 Alarms, now or later.

2. Set the required temperature.
The controller is now operational with factory PID settings.

3. Tune the CN132 precisely to the application:
   - Run the Autotune program. See Section 7. This automatically adjusts the PID control parameters to the characteristics of the application.
   - Or...
   - Enter PID values manually, where the optimum values are already known.

NOTE: For any difficulty in initial configuration, press and hold ▼ ▲ 3 sec. To display the next step, release keys together.

6.2 INITIAL CONFIGURATION

1. Power up.
   Self test sequence (and brief display blanking)

2. Enter the input sensor type.
   Press and hold *
   Press ▲ to select the sensor, e.g., "K".
   Press ▼ to reverse indexing.

   a. Input sensor options
      See also Section 16.2.10.

   b. Linear process inputs
      See Section 16.2.10.

   Thermocouples

</tr>
</tbody>
</table>

   After selection, release *. Check that the selection is correct.
3. To select display in °C or °F:

Press ▲ once.

The display shows that no display unit is selected.

To select °C or °F (Bar, PSI, pH, RH) press and hold *. Press ▲ to select °C, °F, etc.

Release *.

Check that the display alternating with unit is correct.

4. To allocate SP1 - main setpoint output device:

Press ▲ once.

The display shows that no output device has been allocated to SPI.

Available SP1 output devices:

Solid state relay drive
Miniature power relay

The remaining output device is automatically allocated to SP2.

5. To select SP1 output device, press and hold *. Press ▲ to select.

IMPORTANT: Check that correct device is selected. Once entered in memory, it is changeable only on full reset. See Section 16.3.12.

5. Enter the initial configuration into the controllers memory.

Press and hold both ▼ and ▲ for 3 sec (display may differ).

Process temperature is displayed. Ambient 23°C and [PARK] alternate, as no setpoint is yet selected.

6. Display setpoint.

Press and hold *

[4°C] or [7°F] alternate.

7. Adjust setpoint.

Press and hold *

Press ▲ to increase, ▼ to decrease. Flashing LED shows SP1 output ON. The temperature rises.

Controller is operational with factory PID settings:

Proportional band/Gain 10°C/18°F
Integral time/Reset 5 mins
Proportional cycle-time 20 secs
Derivative time/Rate 26 secs
DAC Derivative approach control 1.5
SECTION 7 AUTOTUNE
7.1 TO USE AUTOTUNE - TUNE PROGRAM

1. For best results:
   - Start with the load cool.
   - Set the usual setpoint temperature and use normal load conditions.

2. Enter program mode.
   - Press and hold both \( \nabla \) \( \Delta \) for 3 sec.
   - Release together when \( \text{tune} \) is displayed on entry to program mode. If display differs, see Section 2 for functions menu.
   - Press \( \nabla \) or \( \Delta \) to locate \( \text{tune} \)

3. Select \( \text{tune}/\text{on} \)
   - Press and hold \( * \)
   - Press \( \Delta \) once.
   - Release \( * \)

4. Start TUNE program.
   - Press and hold both \( \nabla \) \( \Delta \) for 3 sec. To exit program mode starting \( \text{tune} \) (display may differ) release \( \nabla \) \( \Delta \)

Display during \( \text{tune} \) program...

NOTE: Setpoint is locked during \( \text{tune} \). To adjust, select \( \text{tune/\text{off}} \)

TUNE program is complete. Alternating display stops. New PID values are entered automatically.

Process temperature climbs to setpoint.

The AUTOTUNE - Tune Program
7.2 MORE ON AUTOTUNE

- Operation
  Autotune "teaches" the controller the main characteristics of the process. For best results, run Autotune at the usual setpoint temperature under normal load conditions.
  Autotune "learns" by cycling the output on and off. The results are measured and used to calculate optimum PID values which are automatically entered in the controller memory.

  PID Parameters tuned:
  - Proportional band/Gain
  - Proportional cycle-time (requires you to manually accept it unless pre-selected; see Section 9)
  - Integral time/Reset
  - Derivative time/Rate
  - Derivative Approach Control (DAC)

  Two alternative forms of Autotune are provided, TUNE and TUNE AT SETPOINT. Each is described on the following pages.

- The Autotune - TUNE program
  To run TUNE select [tune/on]. See Section 7.1. Start with the load cool. The output is cycled at 75% of the setpoint value to avoid any overshoot during the tuning cycle. The warm-up characteristics are monitored to set DAC which minimizes overshoot on subsequent warm-ups.

- The Autotune - TUNE AT SETPOINT program
  To run TUNE AT SETPOINT select [tune/AAt.SP]. See Section 7.1.3. Press [ ] 3 times. The tuning cycle occurs at setpoint and, in some applications, may give better results. See examples below:

  The TUNE AT SETPOINT program is recommended:
  - When the setpoint is below 100°C/200°F, where TUNE's tuning cycle at 75% setpoint may be too close to ambient to produce good results.
  - When the process is already hot and the cooling rate is slow
  - When controlling multi-zone or heat-cool applications
  - To re-tune if the setpoint is changed substantially from the previous Autotune

  NOTE: DAC is not re-tuned by Tune at Setpoint.

The Autotune - TUNE AT SETPOINT Program
SECTION 8 VIEWING AND SELECTING FUNCTIONS

8.1 FUNCTIONS AND OPTIONS
Select the functions of the CN132 from the multi-level menu using program mode.

- For menu of main Functions, see Section 2.
- For Functions and Options list, see Section 16.

Definitions:
- Functions (Fn): The actions the controller can perform
- Options (Opt): The available values for a function

Example:
- Function: Proportional band
- Option: 15°C/°F selected

Short reference: [bAnd/15] (Fn/Opt)

- Control during programming:
  Control with existing settings is maintained during programming. Control with new instructions begins only on exiting program mode, when the controller memory is updated.

- Hints when using program mode:
  Some options will not adjust! The lock may have been applied. All functions and current options may be viewed even when locked.
  Program mode auto-exit: Normal operation is restored, and new instructions entered, if there is no key activity for 60 sec when in program mode (to disable, see Section 14).

- The multi-level Function and Option menu:

<table>
<thead>
<tr>
<th>Level</th>
<th>Function/Option</th>
<th>Setting/Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>SPI.d</td>
<td>Technical functions</td>
</tr>
<tr>
<td>2</td>
<td>SPI.P</td>
<td>Configuration</td>
</tr>
<tr>
<td>1</td>
<td>tunE, bAnd</td>
<td>Operating parameters</td>
</tr>
</tbody>
</table>

For menu of main Functions, see Section 2.

8.2 USING PROGRAM MODE

1. To enter program mode from normal operating mode:
   - Press and hold both ▼ ▲ for 3 sec.

2. To exit program mode at any time returning to normal operating mode:
   - Press and hold both ▼ ▲ for 3 sec.
   - NOTE: Control begins with any new instructions now entered in memory.
3. To view Functions on the same level:

Press ▼ or ▲ once to view the next Function.

Or...

Hold ▼ or ▲ to auto-index through the Functions.

4. To display the current Option value for a Function:

On release of ▼ or ▲, Option alternates with the Function:

Function [bAnd]
Option [10]

5. Autotune Option values:

Autotune calculated value indicator
If a manual Option is selected, the Autotune value is retained in memory.

6. To change an Option value or setting:

Index to the required Function, e.g., [bAnd], press and hold *.
Current Option displayed: [10]

Press ▲ to increase▼ to decrease, e.g., [bAnd] increased to [15]. Release *

IMPORTANT: Check the new Option value before moving to another Function or exiting program mode.

7. To change menu levels:

Press and hold ▼ to reach the level selection function.

Release ▼ to display the current level [1]

Press and hold *
Press ▲ to increase level (2) or press ▼ to decrease level.

Release ▲ to display the new level [2]

REMINDER: Use ▼ and ▲ to locate Functions on each level. To exit program mode and return to normal operation, press and hold both ▼ ▲ 3 sec or auto-exit program mode after 60 sec of inactivity.
SECTION 9 PROPORTIONAL CYCLE-TIME

Optimum cycle-time is calculated by Autotune TUNE or TUNE AT SETPOINT programs, but not automatically implemented.

The choice of cycle-time is influenced by the external switching device or load, e.g., contactor, SSR, valve.

9.1 ALTERNATIVE CYCLE-TIME SELECTION METHODS

See the instructions opposite:

1. Run Autotune. On completion, check the calculated cycle-time. See Section 9.4.
   • Accept,
   • Or...
   • Select nearest suitable value (20 sec factory setting applies unless replaced)
2. Pre-select automatic acceptance of any calculated Autotune cycle-time. See Section 9.5.
3. Manually pre-select any cycle-time between 0.1 and 81 sec. This will not be changed. See Section 9.6.
4. To use the 20 sec factory set cycle-time, no action is needed whether Autotune is used or not.

NOTE: When an Autotuned cycle-time has been accepted, it is automatically updated on each subsequent Autotune.

IF IN DOUBT, USE METHOD 1, ABOVE.

9.2 CYC.T CYCLE-TIME SETTINGS

Analog representation:

9.3 CYCLE-TIME RECOMMENDATIONS

To avoid premature relay failure:

<table>
<thead>
<tr>
<th>Output device</th>
<th>Cycle-time</th>
<th>Load (resistive)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Internal relay</td>
<td>20 sec or more</td>
<td>2A/250V~</td>
</tr>
<tr>
<td>Drive SSD</td>
<td>1-3 sec</td>
<td>SSR</td>
</tr>
<tr>
<td>Drive LY</td>
<td>10 sec minimum</td>
<td>1A/250V~</td>
</tr>
<tr>
<td>Solid state</td>
<td>0.1 sec</td>
<td>Logic/PIM</td>
</tr>
</tbody>
</table>
9.4 TO SELECT AUTOTUNE CALCULATED CYCLE-TIME:
On completion of Autotune:
1. Enter program mode.
   Press and hold both ▼ ▲ for 3 sec.
2. Index to cycle-time Function.
   Press and hold ▲
   Release ▲; 20 sec factory setting is displayed.
3. View calculated optimum cycle-time.
   Press and hold ▲. Then press and hold ▼ until indexing stops; e.g., calculated cycle-time is 16 sec. If suitable, proceed to step 5, below.
4. Manually select more suitable cycle-time.
   If the calculated value is not compatible with the switching device, e.g., 30 sec more suits a contactor, press and hold •. Press ▲
5. Enter the cycle-time in memory.
   Press and hold both ▼ ▲ for 3 sec to exit program mode and implement the new instructions.

9.5 TO PRE-SELECT AUTOMATIC ACCEPTANCE OF ANY AUTOTUNE CYCLE-TIME:
1. Before Autotune is selected:
   Enter program mode, index to cycle-time Function CYC. See Section 9.4.
2. Select Autotune calculated cycle time.
   Press and hold •. Then press and hold ▼ until indexing stops.
   • ▼ Shows no Autotune cycle-time yet exists.
3. Autotune [tune/ on] must be selected now, BEFORE exiting program mode.
   Press and hold ▼ to tune Function.

9.6 TO PRE-SELECT CYCLE-TIME BEFORE AUTOTUNE
1. Before Autotune is selected:
   Enter program mode. Index to cycle-time Function CYC. See Section 9.4.
2. Select preferred value.
   Press and hold • Then press ▲ to increase (35 sec) or ▼ to decrease.
3. Exit program mode or index to another function.
   See Section 9.4, step 5,
SECTION 10 USING THE SECOND SETPOINT - SP2

10.1 TO CONFIGURE SP2 AS AN ALARM:
1. Select the main SP2 operating mode in [SP2.A]. See Section 10.4.
2. If required, select a subsidiary SP2 mode in [SP2.B]. See Section 10.5.
3. If the factory set 2.0°C/3.6°F hysteresis is unsuitable, change in [bnd.2]. Set [CYC.2] ON/OFF (factory setting).
5. Exit program mode — SP2 is now operational as an alarm.

10.2 TO CONFIGURE SP2 AS A PROPORTIONAL CONTROL OUTPUT:
1. Select the main operating mode in [SP2.A]. See Section 10.4.
2. Select SP2 proportional band in [bnd.2] and SP2 cycle-time in [CYC.2].
3. Adjust SP2 setpoint in [SEL.2] (to set y° in 10.4).
4. Exit program mode - SP2 is now operational as a control output with time proportioning control action.

10.3 SP2 IN COOL STRATEGY

Cool strategy Options:
- [Cool] in [SP2.A] (Selects cool strategy)
- [nLin] in [SP2.B] (Non-linear proportional band)

10.4 MAIN SP2 OPERATING MODE: ALARMS OR COOL STRATEGY

Factory setting [nonC]
10.5 SUBSIDIARY SP2 MODE: LATCH/SEQUENCE OR NON-LINEAR COOL

Factory setting: none

1. **Latch** Latch alarm
   - When selected, the alarm output and indicator latch. To reset, when the alarm condition has been cleared, momentarily press **△ ▽** together.

2. **Hold** Sequence alarm
   - When selected, in any alarm mode, prevents an alarm on power up. The alarm is enabled only when the process temperature reaches setpoint.

Example: Sequence alarm used with deviation low alarm — [dV.Lo]

3. **Lath** Latch and sequence alarm

10.6 SP2 OUTPUT AND LED INDICATOR STATES

</tbody>
</table>

Example: Temperature above setpoint

- Output ON (Relay or SSD energized)
- Output OFF (Relay or SSD de-energized)
- LED ON

10.7 **- AL -** SP2 ALARM ANNUNCIATOR

When an SP2 alarm mode is selected in [SP2.A], the alarm annunciator [AL] is displayed, alternating with process temperature, during an alarm condition (or until reset if the latch alarm is selected).

The annunciator may be disabled. See Section 14. Function [no AL], select Option [on].
SECTION 11 RANGING AND SETPOINT LOCK

11.1 RANGING - IMPORTANT SAFETY NOTE:
The factory setting of full-scale \textit{hi.SC} is the sensor maximum value. See Section 16.2.10. This should be reduced to a safe maximum for the plant.

1. \textbf{hi.SC} full-scale and \textbf{Lo.SC} scale minimum
   1. \textit{hi.SC} limits the maximum setpoint adjustment, \textit{Lo.SC} limits the minimum. Both adjust over the full sensor range, including the negative.
   2. Factory settings:
      \textit{hi.SC} = sensor maximum, \textit{Lo.SC} = 0°C/32°F
      Reduce \textit{Lo.SC} to set below 0°C/32°F
   3. \textit{hi.SC} may not be adjusted below the \textit{lo.SC} setting, \textit{lo.SC} not above \textit{hi.SC}

2. Example: Setpoint limited to 400° - 600°C

3. \textbf{SP.LK} SETPOINT LOCK
This function in level 1 enables the machine setter to lock the setpoint, preventing unauthorized adjustment.

SECTION 12 TOOLS TO IMPROVE CONTROL ACCURACY

Use these tools to assist with machine development, commissioning and trouble shooting.

12.1 \textbf{SP1.P} READ SP1 OUTPUT PERCENTAGE POWER
Poor control may be due to incorrectly sized heaters. \textbf{SP1.P} constantly displays the output percentage power applied, which at normal setpoint should be within 10–80% (preferably 20–70%) to achieve accurate control.

12.2 \textbf{CheK} CONTROL ACCURACY MONITOR

12.2.1 Establishing temperature control accuracy, to within 0.1°C/°F:

The monitor is started using \textbf{CheK} and the variance (deviation), maximum and minimum temperatures are displayed and constantly updated in \textbf{ReAd}

12.2.2 Control accuracy monitor - Read-outs:
12.2.3 Using the [ChEK] Control accuracy monitor:
1. To start the monitor select [ChEK] on.
2. During monitoring, either return to normal operation or remain in program mode.
3. To view monitor readings: Index to [Read]

   ![Image of monitor readings]

   Release ▼ or ▲.

4. Press and hold ◆ to display variance (0.6°).

5. Press and hold ◆. Press ▲ once to display maximum (320.3°).

6. Press and hold ◆. Press ▲ once more to display minimum (319.7°).

7. [ChEK] oFF stops monitor, retaining readings. Next [ChEK] on resets readings.

8. On de-powering: [ChEK] resets to oFF and [Read] is zeroed.

SECTION 13 OEM PROGRAM SECURITY

13.1 ENTRY TO HIDDEN LEVEL 4
Access level 4 only at VEr in level 3.

![Image of VEr]
Press and hold ▼ ▲ 10 sec.

![Image of Lock]
Enter level 4 at Lock
Release ▼ ▲ together.
Factory setting: none

13.2 PROGRAM SECURITY USING LOCK
Select from 3 Lock options:
Press and hold ◆. Press ▲ to index.

- Locks level 3 functions only - TECHNICAL FUNCTIONS.
- Locks levels 2 and 3 only - CONFIGURATION AND TECHNICAL FUNCTIONS.
- Locks all functions *

13.3 NOTES:
- Locked functions and current options may be read.
- * Unrestricted: LEVe, VeR, JAR, SPlK

18
SECTION 14 TECHNICAL FUNCTIONS:
SECURE LEVEL 4

14.1  \( dEr \cdot 0.1 - 1.0 \times \) \( dEr \cdot 0.5 \)
Derivative sensitivity

14.2  \( dS \cdot 0.1 - 1.0 \times \) \( dS \cdot 0.5 \)
Display sensitivity
\( dS \) = Direct display of input
\( 0 \) = Maximum
\( 1 \) = Minimum sensitivity

14.3  \( nAL \)  
\( off \)  
\( on \)
Disable SP2 Alarm annunciator \( nAL \)
Select \( on \) to disable \( nAL \)

14.4  \( Prof \)  
\( Auto \)  
\( STAY \)
Program mode auto-exit switch
Auto-exit returns display to normal if 60 sec key
inactivity. Select \( STAY \) to disable.

14.5  \( LoC \)  
\( none \)  
\( LEV.3 \)  
\( LEV.2 \)  
\( ALL \)
Program security lock, see Section 13.2.

SECTION 15  ERROR MESSAGES

1. Sensor fault:
\( FA.I \)
\( FA.E \)
Causes:
Thermocouple burnout
RTD/Pt100 short circuit
Negative over-range
Action: Check sensor/wiring.

2. Non-volatile memory error:
\( FA.L \)
\( dTA \)
Action: De-power briefly.
Replace unit if it persists.

3. Manual power error:
\( FA.L \)
\( hANd \)
Cause:
SP1 in ON/OFF in CYC.1
Action: Select proportional mode.

4. Immediate fail on Autotune start:
\( FA.I \)
\( 3.20 \)
Cause:
1. Setpoint unset on new unit.
2. SP1 at ON/OFF in CYC.1
Action: Select proportional mode.

NOTE: Message latches. Press \( \downarrow \) \( \uparrow \) briefly to reset.

5. Fail during Autotune tuning cycle:
The thermal characteristics of the load exceed the
Autotune algorithm limits. The failure point is the first dis-
play in \( dTA \) with \( 0.0 \)
Action:
1. Change the conditions, e.g., raise setpoint.
4. If the error message persists, call OMEGA for advice.

6. Reading Autotune tuning cycle results in [data]

Action:
1. Index to [data]
   Release ▼ or ▲
2. Press and hold *
   Display [C1A] value (10.4), i.e.,
   Cycle time 'A' = 10.4 sec
   Press ▲ once.
   Displays [C1D] value (19.6), i.e.,
   Cycle time 'b' = 19.6 sec
4. Repeat step 3 above to view:
   [C1] [C2] [C3] [C4], [uS] [oS] [oS2]

7. Autotune tuning data and limits:

Autotune limits
- Ct (Quarter cycle time): 1–1800 sec/30 min
- oS (Overshoot)
- uS (Undershoot) max 255°C/490°F

SECTION 16 FUNCTIONS AND OPTIONS: LEVEL 1
SELECT AUTOTUNE

16.1.1 [loW] [oFF] on [PAK] [At.SP]

Select Autotune, see Section 7, or PAK. PAK temporarily turns the output(s) off. To use, select [PAK] and exit program mode. OFF disables. Useful when commissioning fast loads or multizones.

SP1 OPERATING PARAMETERS

16.1.2 [blind] [0.1] *°C/F 10°C/18°F

SP1 Proportional band/Gain or Hysteresis
*25% sensor maximum

Proportional control eliminates the cycling of on-off control. Heater power is reduced, by the time proportioning action, across the proportional band.
16.1.5 $d\text{AC} \quad 0.5 - 5.0 \times b\text{And} \quad 1.5$

SP1 Derivative approach control...DAC
Tunes warm up characteristics, independent of normal operating conditions, by controlling when derivative action starts during warm up (smaller $d\text{AC}$ value = nearer setpoint).

16.1.6 $\text{Cycle} \quad A \rightarrow \text{on/of} \quad 0.1 - 81 \text{ secs} \quad 20$

SP1 Proportional cycle-time, see Section 9.
Determines the cycle rate of the output device for proportional control. Select \text{on/of} for ON/OFF mode.

16.1.7 $\text{Setp} \quad 0 \rightarrow * \text{C/F}$

SP1 Offset/Manual reset
$* \pm 50\% \ b\text{And}$ Applicable only in proportional mode with integral disabled \text{Int./Off}

16.1.8 $\text{Setp} \quad \text{off} \rightarrow \text{on}$

Lock main setpoint, see Section 11.2.
**SP2 OPERATING PARAMETERS**

16.1.9 **Set** 0 - *°C/°F
Adjust SP2 setpoint. See Section 10.
* Deviation alarms [DV.HI] [DV.Lo] [bAnd] 25% sensor maximum
* Full-scale alarms [FS.HI] [FS.Lo]: sensor range

16.1.10 **hyst** 0.1 - *°C/°F [2.0°C/3.0°F]
Select SP2 hysteresis or Proportional band/Gain
* 25% sensor maximum

16.1.11 **CT** on 0.1 - 0 sec
Select SP2 ON/OFF or Proportional cycle-time
Select on/off for ON/OFF mode or the cycle rate of SP2 output device for proportional mode.

**MANUAL CONTROL MODES**

16.2.1 **SP** 0 - 100% "Read only"
Read SP1 output percentage power. See Section 12.

16.2.2 **nGen** on 1 - 100% (Not in ON/OFF)
SP1 manual percentage power control
For manual control should a sensor fail. First, record typical SP1 values.

16.2.3 **PL** 100 - 0 % duty cycle
Set SP1 power limit percentage
Limits max SP1 heating/cooling during warm up in proportional band

16.2.4 **PL** 100 - 0 % duty cycle
Set SP2 percent power limit (cooling)

**SP2 OPERATING MODES:** See Section 10.

16.2.5 **SP**
Main SP2 operating mode
- none [DV.HI] [DV.Lo] [bAnd]
- FS.HI [FS.Lo]: Cool

16.2.6 **SP**
Subsidiary SP2 mode: latch/sequence
Non-linear cool proportional band

**INPUT SELECTION AND RANGING**

16.2.7 **SP** 1 0.1
Select display resolution:
0.1° display of PV, SP, [OFS1] [Set.2] [Hi.SC] [Lo.SC]

16.2.8 **SF** min max °C/°F
Set full scale. See Section 11.1.

16.2.9 **LoSF** min max °C/°F
Set scale minimum. See Section 11.1.

16.2.10 **nGen** Select input sensor none
Option/
- sensor type: sensor range [linear]
- Thermocouples

Resets all functions to factory settings

CAUTION: Note current configuration before using this function. See Section 18. Initial configuration and OEM settings must be re-entered.

INPUTS: See Section 16.2.10.

SECTION 17 SPECIFICATIONS

Thermocouple – 9 types

- Standards: IPTS 68/DIN 43710
- CJC rejection: 20:1 (0.05°C) typical
- External resistance: 1000 Ω maximum

Resistance thermometer: RTD-2/Pt100 2 wire

- Standards: DIN 43760 (100Ω 0°C/138.5Ω 100°C pt)
- Bulb current: 0.2mA maximum

Linear process inputs: mV range: -10 to 50mV

- see "PIM process Interface Module" for additional input/output options

Applicable to all inputs: SM = sensor maximum

- Calibration accuracy: ±0.25% SM ±1°C
- Sampling frequency: Input 10Hz, CJC 2 sec
- Common mode rejection: Negligible effect up to 140dB, 240V, 50–60Hz
- Series mode rejection: 60dB, 50–60Hz
- Temperature coefficient: 150 ppm/°C SM
- Reference conditions: 22°C ±2°C, rated voltage, after 15 minutes settling time

OUTPUT DEVICES (Standard): See Section 5.3.

- **SSD**: Solid state relay drive: To switch a remote SSR 5Vdc +0/-15% 10mA non-isolated
- **Miniature power relay**: From A/SPST contacts (AgCdO) 2A/250V– resistive load
CONTROL CHARACTERISTICS: See Section 16.

SP1 PID Parameters: 1.1-1.8
SP2 Parameters: 1.9-1.11
SP2 Operating modes: 2.5-2.6
Manual control modes: 2.1-2.4

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of 37 months from date of purchase. OMEGA Warranty adds an additional one (1) month grace period to the normal three (3) year product warranty to cover handling and shipping time. This ensures that OMEGA’s customers receive maximum coverage on each product.

If the unit should malfunction, it must be returned to the factory for evaluation. OMEGA’s Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective it will be repaired or replaced at no charge. OMEGA’s WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of being damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA’s control. Components which are not warranted, including but not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a “Basic Component” under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS / INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA’S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence. The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR WARRANTY RETURNS, please have the following information available BEFORE contacting OMEGA:
1. P.O. number under which the product was PURCHASED.
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR NON-WARRANTY REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:
1. P.O. number to cover the COST of the repair,
2. Model and serial number of the product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA’s policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.
