RETURN REQUESTS / INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA ENGINEERING Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

FOR WARRANTY RETURNING, please have the following information available BEFORE contacting OMEGA:
1. P.O. number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

OMEKA'S policy is to make running changes, not model changes, whenever an improvement is possible. This affects our customers the latest in technology and engineering.

FOR NON-WARRANTY REPAIRS OR CALIBRATION, consult OMEGA for current repair/calibration charges. Have the following information available BEFORE contacting OMEGA:
1. P.O. number to cover the COST of the repair/calibration,
2. Model and serial number of product, and
3. Repair instructions and/or specific problems relative to the product.

1 Introduction

1.1 General Description

The OMEGA® TX95 Two-Wire Voltage Input Transmitter will produce a standard 4-20 mA output signal proportional to that produced by its voltage input. Transmission of the proportional current output may be accomplished by using inexpensive copper wire.
Introduction

Figure 1-1 TX95 Transmitter

Figure 1-2 Dimensions (in inches)
The TX95 transmitter is normally powered by an unregulated power supply as shown in Figure 1-3. The proportionally-transmitted signal begins at 4 mA, at the low end of its voltage range, and increases to 20 mA, at the high end of its voltage range. (There are various voltage ranges available for the TX95 transmitter. To order, refer to Section 1.3 for correct Model Numbers and Range Codes.)
Introduction

Figure 1-3  TX95 Voltage Transmitter
The TX95 two-wire transmitter works with voltage inputs and provides an output current of 4-20 mA proportional to the input. Two copper wires carry the 4-20 mA signal and dc voltage to operate the transmitter, thereby reducing possible noise pick-up errors. The TX95 does NOT provide isolation between its input and the 4-20 mA output.
1 Introduction

1.2 Features

- 4-20 mA output
- ±0.1% full-scale accuracy
- Upscale break protection
- Low Cost
1.3 Models Available

*Insert range code from Table 1-1*
Unpacking Instructions

Remove the Packing List and verify that you have received all equipment, including:

- TX95 Voltage Input Two-Wire Transmitter
- Operator's Manual

If you have any questions about the shipment, please call the Customer Service Department.

When you receive the shipment, inspect the container and equipment for signs of damage. Note any evidence of rough handling in transit. Immediately report any damage to the shipping agent.

**NOTE**

The carrier will not honor damage claims unless all shipping material is saved for inspection. After examining and removing contents, save packing material and carton in the event reshipment is necessary.
3 Installation

3.1 Mounting the TX95

The TX95 transmitter may be:
1. surface mounted,
2. mounted inside a protection head (refer to Figure 3-1), or
3. installed into the OMEGA mounting track (part number RT) using an OMEGA mounting bracket (part number TX90-BR).
4. installed into standard 35mm DIN rail using an OMEGA DIN rail mounting adapter (part number TX-90-DIN).

Figure 3-2 shows the RT mounting track. Figure 3-3 shows the TX90-BR mounting bracket.
Figure 3-4 shows a typical installation using the bracket and mounting track. Figure 3-5 shows the TX90-DIN adapter.

Figure 3-1 Assembly of the TX95 Voltage Input Transmitter inside an OMEGA NB1 Protection Head (in Inches)
Figure 3-2 RT Mounting Track (Dimensions in inches)

CAUTION
Hand tighten transmitter mounting screws only. Do not overtighten.
Figure 3-3 TX90-BR Mounting Bracket (Dimensions in inches)
Figure 3-4 Installation with the Bracket and Track (Dimensions in inches)
Figure 3-5 TX90-DIN DIN Rail Mounting Adapter (Dimensions in inches)
3.2 *Wiring the TX95* (Refer to Figure 3-6)

1. Connect a dc power supply in series with the load to the (+PS) and (-PS) power terminals. Note that the load (usually a monitoring instrument) may be connected to either the (+) or (-) power lead.

2. Connect the voltage input to the input terminals as shown.
Figure 3-6 Wiring Diagram for the TX95
4 Calibration Instructions

4.1 Equipment Required
- Precision Voltage Source, such as the OMEGA Model CL8301 dc Voltage and Current Calibrator
- Precision DMM capable of measuring mA, within 0.001 mA resolution and ±0.002 mA accuracy
4.2 Calibration Procedures (Refer to Figure 4-1)

Connect the calibration equipment according to Figure 4-1. Standard copper test leads are used.

To check or adjust the calibration:
1. Locate the Z (zero) and S (span) potentiometers.
2. Select, from Table 4-1, the correct voltage values for the Z (zero) and S (span) adjustments that correspond to the Model Number. For example, for Model TX95-V1, the Z value is 0.000 mV, and the S value is 60.000 mV.
Calibration Instructions

If a Precision Voltage source is used, such as the OMEGA Model CL8301 Precision Calibrator, select the voltage Input Z (zero) and S (span) values.

3. Set the calibrator to the selected Z (zero) voltage value. Adjust the Z potentiometer to read 4.000 mA on the monitoring instrument.

4. Set the calibrator to the selected S (span) voltage value. Adjust the S potentiometer to read 20.000 mA on the monitoring instrument.

5. Repeat steps 3 and 4, as required, until the readings are exactly 4.000 mA and 20.000 mA. This procedure is necessary since there is interaction between the two potentiometers.
Calibration Instructions

Figure 4-1 TX95 Voltage Calibration Set-Up

* With 250Ω load, dc supply must be at least 12-35 Vdc.

Troubleshooting Guide

Malfunction or incorrect operation may be caused by:

1. Incorrect Readings:
   Check the improper wiring (Refer to Figure 3-6)

2. Loose or broken wires:
   Check each terminal connection for tightness. Move each wire back and forth and note any changes in operation.

3. Too high a load resistance in the output current loop or too low a current rating on the power supply:
Troubleshooting Guide

a) Measure the total resistance of each device (excluding the transmitter and power supply) in the 20 mA loop, including the resistance of the lead wires.

b) Calculate maximum allowable loop resistance using the formula:  
   \[ \text{Loop Resistance (maximum)} = \frac{V_{\text{supply}} - 7V}{0.020A} \]

For example, a 24V power supply would give a maximum loop resistance of: 17V / 0.020A = 850 ohms.

c) Make sure the power supply is rated for at least 28 mA times the number of TX95 transmitters being powered. For example, if the supply is powering 5 transmitters, the supply should be rated for at least 140 mA.

OMEGA warrants this unit to be free of defects in materials and workmanship and to give satisfactory service for a period of 61 months from date of purchase. OMEGA Warranty adds an additional one (1) month grace period to the normal five (5) year product warranty to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product. If the unit should malfunction, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective it will be repaired or replaced at no charge. However, this WARRANTY is VOID if the unit shows evidence of tampering with or shows evidence of being damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components which wear or which are damaged by misuse are not warranted. These include contact points, fuses, and triacs.

OMEGA is glad to offer suggestions on the use of its various products. Nevertheless, OMEGA only warrants that the parts manufactured by it will be as specified and free of defects.

OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED.

LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

Every precaution for accuracy has been taken in the preparation of this manual; however, OMEGA ENGINEERING, INC. neither assumes responsibility for any omissions or errors that may appear nor assumes liability for any damages that result from the use of the products in accordance with the information contained in the manual.

SPECIAL CONDITION: Should this equipment be used in or with any nuclear installation or activity, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the equipment in such a manner.
