CN3420 SERIES
1/4 DIN Panel Mount
Universal Temperature & Process Controller
OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of **37 months** from date of purchase. OMEGA Warranty adds an additional one (1) month grace period to the normal **three (3) year product warranty** to cover handling and shipping time. This ensures that OMEGA’s customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA’s Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA’s WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA’s control. Components which wear are not warranted, including but not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a “Basic Component” under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS / INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA’S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR WARRANTY RETURNS, please have the following information available BEFORE contacting OMEGA:

1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to product.

FOR NON-WARRANTY REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:

1. Purchase Order number to cover the COST of the repair,
2. Model and serial number of the products, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA’s policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

GETTING STARTED

This manual is divided into 5 sections which contain all the information needed to install, configure, set up and operate the instrument. Each section is identified clearly by a symbol as shown below.

Displays and Function Keys
- Displays and function keys
- LED Indication
- Error Messages

Operator Mode (Level 1)
- Operator menus for:
  - Standard controller
  - Heat/Cool controller
  - Remote Set Point controller
  - Profile controller
  - Multiple Fixed Set Points controller
- Auto-tuning

Set Up Mode (Levels 2, 3 and 4)
- Level 2 – Tuning
- Level 3 – Set Points
- Level 4 – Profile

Configuration Mode (Levels 5 and 6)
- Level 5 – Basic hardware and control functions
- Level 6 – Ranges and passwords

Installation
- Siting
- Mounting
- Electrical connections
The fold-out page inside on the back cover of this manual shows all the frames in the programming levels. Space is provided on the page for writing the programmed setting or selection for each frame.
1.1 Introduction – Fig. 1.1
The instrument front panel displays, function keys and LED indicators are shown in Fig. 1.1.

Fig. 1.1 Front Panel Displays, Function Keys and Indicators
1.2 LED Alarms and Indicators – Figs. 1.2 and 1.3

LED Status

All  • All LEDs flashing – controller is in the configuration mode.
A1  • Flashes when Alarm 1 is active (off when inactive).
A2  • Flashes when Alarm 2 is active (off when inactive).
R   • On when the controller is operating on the remote set point value.
     • Off when the controller is operating using the local set point value or one of the four fixed set points (in multiple set point mode).
     • Flashes when a Ramp/Soak profile is running.
M   • On when the controller is operating in Manual control mode.
     • Off when the controller is operating in Auto control mode.
     • Flashes when the controller is performing an auto-tune.

Fig. 1.2 LED Alarms and Indicators
1.2 LED Alarms and Indicators – Figs. 1.2 and 1.3

**LED Status**

- **OPI**
  - LED indicates when the output 1 (heat) value is displayed in the lower display.

- **OP2**
  - LED indicates when the output 2 (cool) value is displayed in the lower display.

- **°C**
  - LED indicates when the controller is configured to measure in degrees Celsius.

- **°F**
  - LED indicates when the controller is configured to measure in degrees Fahrenheit.

*Fig. 1.3 LED Indicators*
1.3 Use of Function Keys – Fig. 1.4

A – Raise and Lower Keys

![Diagrams of raise and lower keys with numerical values and arrows indicating up and down movements.]

Use to change/set a parameter value... and... move between levels

B – Parameter Advance Key

![Diagram showing parameter advance key with frame numbers and arrows indicating forward and backward movements.]

Use to advance to the next frame and... ...select the top (LEVEL) frame from within a level

Note. This key also stores any changes made in the previous frame

C – Auto/Manual Key

![Diagram of auto/manual key with labels for process variable and control set point.]

Use to select Auto or Manual control mode

Fig. 1.4 Use of Function Keys
### 1.4 Error Messages

2 OPERATOR MODE

2.1 Introduction
Operator Mode (Level 1) is the normal day-to-day mode of the instrument.

Frames displayed in Level 1 are determined by the control strategy which is selected during configuration of the instrument – see Section 4.

Note. Only the operating frames relevant to the configured strategy are displayed in Operator Mode.

The five control strategies are:

- Standard controller  –  page 9
- Heat/Cool controller  –  page 10
- Remote Set Point controller  –  page 12
- Profile controller  –  page 14
- Multiple Fixed Set Points controller  –  page 16
2.2 Standard Controller

Process Variable Value

Control Set Point Value (Local set point)
[Set point low limit to set point high limit]

Process Variable Value

Control Output Value (%)
[0 to 100% (–10% to 110% for analog output)]
Adjustable in manual mode only.

Ramping Set Point Value (Read only)
The actual set point value is displayed, i.e. the instantaneous value the controller is working to.

Security Code
[0 to 9999]
Select the appropriate security code to access:
Auto-tune enable frame (Level 1),
Set Up mode (Levels 2, 3, 4).

Auto-tune Enable
ON – Auto-tune on
OFF – Auto-tune off

Refer to page 16 for the Auto-tune procedure.

Level 1 (Operator mode)
Refer to Section 3 for Levels 2, 3 and 4.

•1 Not displayed if the ramping set point facility is turned off – refer to Section 3.3.
2.3 Heat/Cool Controller

Process Variable Value

Control Set Point Value (Local set point)
[Set point low limit to set point high limit]

Process Variable Value

Control Output Value (Heat %)
[0% to 100% (0% to 110% for analog output)]
If adjusted below 0% the 'Cool' frame is displayed.

Control Output 2 Value (Cool %)
[0% to –100% (0% to –110% for analog output)]
If adjusted above 0% the 'Heat' frame is displayed.

Ramping Set Point Value (Read only)
The actual set point value is displayed, i.e. the instantaneous value the controller is working to.

Continued on next page.

•1 Not displayed if the ramping set point facility is turned off – refer to Section 3.3.
...2.3 Heat/Cool Controller

Security Code
[0 to 9999]
Select the appropriate security code to access:
   Auto-tune enable frame (Level 1),
   Set Up mode (Levels 2, 3, 4).

Auto-tune Enable
ON  – Auto-tune on
OFF – Auto-tune off

Refer to page 16 for the Auto-tune procedure.

Level 1 (Operator mode)
See Section 3 for Levels 2, 3 and 4.
2.4 Remote Set Point Controller

**Process Variable Value**

**Control Set Point Value**

[Set point low to set point high limit]
Adjustable in local Set Point Mode only.

**Process Variable Value**

**Control Output Value (%)**

[0% to 100% (–10% to 110% for analog output)]
Adjustable in manual mode only.

**Remote Set Point Selection**

- $rSP_Y$ – Remote Set Point
- $rSP_n$ – Local Set Point

Local or remote set point can also be selected using a digital input.

The option to change the set point selection at this frame can be disabled in the configuration level.

**Remote Set Point Value** (read only)

Continued on next page...

**Note.**

If the remote set point input fails while selected, the controller selects the local set point value automatically. The upper display changes to $rSP_F$ and the lower display flashes. When the fault condition is removed, the remote set point is re-selected automatically. To clear the error condition while the remote set point input is still outside its allowed range, select the local set point by pressing the ▼ key ($rSP_n$ is displayed).
### 2.4 Remote Set Point Controller

#### Ramping Set Point Value (Read only)

The actual set point value is displayed, i.e. the instantaneous value the controller is working to.

#### Security Code

[0 to 9999]

Select the appropriate security code to access:
- Auto-tune enable frame (Level 1),
- Set Up mode (Levels 2, 3, 4).

#### Auto-tune Enable

**ON**  – Auto-tune on

**OFF**  – Auto-tune off

Refer to page 16 for the Auto-tune procedure.

#### Level 1 (Operator mode)

See Section 3 for Levels 2, 3 and 4.

---

*1 Not displayed if the ramping set point facility is turned off – refer to Section 3.3.
2.5 Profile Controller

Process Variable Value

Control Set Point Value
[Set point low limit to set point high limit]

Process Variable Value

Control Output Value (%)
[0% to 100% (–10% to 110% for analog output)]
Adjustable in manual mode only.

Profile Segment Number (1 to 4) currently active

Profile Status

STOP – Profile inactive – the control set point is equal to the local set point value when the profile is not running.

run – Profile active – currently operating on the segment indicated.

HOLD – Profile hold – pauses the current ramp or soak mode by putting it into 'Hold' mode. The guaranteed ramp soak feature can also be used to put the profile into a 'Hold' mode until the process variable comes back within the hysteresis band.

Note. The profile status can be changed using a digital input.

Continued on next page...
...2.5 Profile Controller

Ramping Set Point Value (Read only)
The actual set point value is displayed, i.e. the instantaneous value the controller is working to.

Security Code
[0 to 9999]
Select the appropriate security code to access:
Auto-tune enable frame (Level 1),
Set Up mode (Levels 2, 3, 4).

Auto-tune Enable
ON – Auto-tune on
OFF – Auto-tune off

Refer to page 16 for the Auto-tune procedure.

Level 1 (Operator mode)
See Section 3 for Levels 2, 3 and 4.

•1 Not displayed if the ramping set point facility is turned off – refer to Section 3.3.
2.6 Multiple Fixed Set Points Controller
If the Multiple Fixed Set Points Controller type is selected during configuration, four fixed control set points can be set – see Section 4.4.

---

**Notes.**

- a) The top display momentarily displays the set point selected before reverting to the display of the process variable value.

- b) A digital input can also be used to select the fixed set points.

---

**Process Variable Value**

**Control Output Value (%)**

[0% to 100% (–10% to 110% for analog output)]

Adjustable in manual mode only.

**Ramping Set Point Value (Read only)**

The actual set point value is displayed, i.e. the instantaneous value the controller is working to.

---

1 Not displayed if the ramping set point facility is turned off – refer to Section 3.3.
...2.6 Multiple Fixed Set Points Controller

Security Code
[0 to 9999]
Select the appropriate security code to access:
Auto-tune enable frame (Level 1),
Set Up Mode (Levels 2, 3, 4).

Auto-tune Enable
ON – Auto-tune on
OFF – Auto-tune off

Refer to page 16 for the Auto-tune procedure.

Level 1 (Operator mode)
See Section 3 for Levels 2, 3 and 4.
2.7 Auto-tune

**Information.**
- Auto-tune optimizes process control by monitoring process performance and automatically updates the control parameters.
- Before starting auto-tune, the process variable must be stable (±2% of engineering range).

**Note.** The time taken to complete auto-tune depends upon the system response time.

---

**Fig 2.1 Typical Auto-tune Cycles**
2 OPERATOR MODE...

...2.7 Auto-tune

From Security Code frame (any Operating page). The correct password must be entered to access the auto-tune frame.

Auto-tune Enable

ON  – Auto-tune on
OFF  – Auto-tune off

Auto-tune can be stopped at any time by pressing the key.

Settings for P + I control only
To tune for P + I control only, set the derivative term to 'OFF' in the Tuning Level – see Section 3.2.

Notes.

- On completion, the controller enters auto-control mode and begins to control the process using the new PID values. For fine tuning – see Section 3.
- For heat/cool control the cool proportional band is set to the same value as the heat proportional band (this value may need modification).
- If an error occurs during auto-tune, the controller reverts to manual mode with the control output set to the configured output value. An error message is displayed – see Table 2.1.

<table>
<thead>
<tr>
<th>Error</th>
<th>Description</th>
<th>Error</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>PV failed during auto-tune</td>
<td>7</td>
<td>A resultant P, I or D value was calculated out of range</td>
</tr>
<tr>
<td>2</td>
<td>Auto-tune has timed out during an auto-tune step</td>
<td>8</td>
<td>PV limit exceeded ('At start up' auto-tune)</td>
</tr>
<tr>
<td>3</td>
<td>Process too noisy to auto-tune</td>
<td>9</td>
<td>Controller put into configuration mode</td>
</tr>
<tr>
<td>4</td>
<td>Process too fast to auto-tune</td>
<td>10</td>
<td>Auto-tune terminated by user</td>
</tr>
<tr>

<td>Process too slow to auto-tune</td>
<td>11</td>
<td>PV is changing in the wrong direction during step test</td>
</tr>
<tr>
<td>6</td>
<td>PV deviated from set point by &gt;25% eng. span during frequency response test</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table 2.1 Auto-tune Error Codes
3.1 Introduction
To access the Set Up Mode (Levels 2, 3 and 4) the correct password must be entered in the security code frame (the default password code is 0). Refer to the fold-out sheet at the back of this manual for the contents of these levels.

3.2 Tuning (Level 2) – Fig. 3.2

Level 2 – Tuning Level

Note. To select this frame from anywhere in this page, press the key for a few seconds.

Cycle Time

Heat Time Proportioning Output
[1.0 to 300.0 seconds (<1.0 = 'On/Off' control)]

Cool Time Proportioning Output
[1.0 to 300.0 seconds (<1.0 = 'On/Off control)]

Continued on next page.

•1 Only displayed if Output 1 is assigned to a relay or logic output.
•2 Only displayed if heat/cool hardware configuration is selected.
...3 SET UP MODE

...3.2 Tuning (Level 2) – Fig. 3.2

On/Off Hysteresis Value
(used for both heat and cool outputs)
[In engineering units]

Proportional Band
Enter the proportional band value for the heat and cool outputs.

Heat Output (Output 1)
[0.1% to 999.9%]

Cool Output (Output 2)
[0.1% to 999.9%]

Continued on next page.

•1 Only displayed if On/Off control is selected for either output.
•2 Only displayed if heat/cool hardware configuration is selected.
...3.2 Tuning (Level 2)

**Integral Action Time**

[1 to 7200 seconds or OFF (OFF=0)]

**Manual Reset Value**

[0% to 100% or –100% to +100% for heat/cool]

This value is applied as a bias to the control output.

*Note.* Manual reset is applied with integral action both on and off.

**Derivative Action Time**

[0.1 to 999.9 seconds or OFF (OFF=0)]

**Overlap for Heat/Cool Control**

[–20.0% to +20.0%]

This frame defines the portion of the proportional band (Proportional band heat + Proportional band cool) over which both outputs are active – see Fig. 3.1. Neither output is active in the deadband.

A positive value gives an overlap and a negative value a deadband.

*1 Only displayed if a heat/cool hardware configuration is selected.
Fig. 3.1 Proportional Band & Deadband/Overlap – Heat/Cool Control Only
3.3 Set Points (Level 3)

**Level 3 – Set Points Level**

*Note.* To select this frame from anywhere in this page, press the key for a few seconds.

**Local Set Point Value**
[Within set point high and low limits, in engineering units]

**Remote Set Point Selection**
Set Point Type:
- \( rSP.y \) – remote set point
- \( rSP.n \) – local set point

Remote set point value.

**Alarm 1 Trip Point**
Alarm type:
- \( R\,ih\,P \) = High process alarm
- \( R\,il\,P \) = Low process alarm
- \( R\,ih\,d \) = High deviation alarm
- \( R\,il\,d \) = Low deviation alarm
- \( R\,il\,b \) = Loop break alarm

Trip Point:
- Process & deviation alarms [in engineering units]
- Loop break alarm [1 to 9999 seconds]

**•1** Only displayed if the remote set point option is selected.

Continued on next page.
3 SET UP MODE...

...3.3 Set Points (Level 3)

1. **Alarm 1 Hysteresis Value**
   [in engineering units]

2. **Alarm 2 Trip Point**
   Alarm type:
   - \( A2.hP \) = High process alarm
   - \( A2.LP \) = Low process alarm
   - \( A2.hd \) = High deviation alarm
   - \( A2.Ld \) = Low deviation alarm
   - \( A2.Lb \) = Loop break alarm
   Trip Point:
   - Process & deviation alarms [in engineering units]
   - Loop break alarm [1 to 9999 seconds]

3. **Alarm 2 Hysteresis Value**
   [in engineering units]

4. **Remote Set Point Input Ratio and Bias**
   The remote set point value = ratio x remote set point input + bias.
   - **Ratio**
     [0.001 to 9.999]
   - **Bias**
     [in engineering units]

Continued on next page.

1. Only displayed if custom alarm hysteresis is selected – see Section 4.3.2.
   Not displayed if Loop Break Alarm type selected.
2. Only displayed if the remote set point option is selected.
3.3 Set Points Level

**Ramp Rate (for ramping set point facility)**

[1 to 9999 engineering units per hour, or OFF]

The ramping set point facility can be used to prevent a large disturbance to the control output when the set point value is changed. This only applies to the local and multiple fixed set points.

*Note.* For remote set points, the ramp rate is applicable only when switching from remote to local mode, not from local to remote.

**Offset Adjustment**

An offset can be applied to the process variable input to enable spot calibration or the removal of system errors.

[±10% of engineering range in engineering units]
3.4 Profile (Level 4)

A four-segment ramp/soak profile facility is provided. This level can only be accessed if the profile option is selected in the configuration level. The four segments are fixed as ramps or soaks as follows:

- **Profile Level**

  ![Profile Diagram]

  - **End.1**
  - **Str.1**
  - **Skt.2**
  - **End.3**

**Note.** To select this frame from anywhere in this page, press the key for a few seconds.

- **Start value for 1st Segment (ramp).**
  [Within display range (in engineering units)]

  Enter the start value required.

- **End Value for 1st Segment (ramp).**
  [Within display range (in engineering units)]

  Enter the end value required.

- **With the self-seeking set point facility enabled, the first ramp starts at the current process variable value instead of the start value for the 1st segment.**

Continued on next page.
...3 SET UP MODE

...3.4 Profile (Level 4)

**Ramp Rate for 1st Segment.**
[Engineering units*]

Enter the ramp rate required.
* The time option Eng Units/hr or Eng Units/min is set in the configuration level – see section 4.3.2.

**Example.** Required Ramp Rate 40°C/min
Ramp Rate set to 40, Time Option set to ‘Min’ – see section 4.3.2

**Soak Time for 2nd Segment.**
[0 to 999.9 minutes or hours]*

**End Value for 3rd Segment (ramp).**
[Within display range (in engineering units)]

**Ramp Rate for 3rd Segment.**
[Engineering units/hour or /minute]*

* Depending on the time option selected in the configuration level.

Continued on next page.

•1 The engineering value is shown with an extra decimal place (up to a maximum of 3) for greater accuracy in setting the ramp rate.
...3.4 Profile (Level 4)

Soak Time for 4th Segment.
[0 to 999.9 minutes or hours]*
* Depending on the time option selected in the configuration level.

Self-Seeking Set Point Enable.
YES – enable self-seeking set point
NO – disable self-seeking set point

When enabled the controller inserts the current process variable value as the starting point on initiation of the profile (instead of the start value for segment 1).

Profile Hysteresis for Guaranteed Ramp/Soak.
[In engineering units or OFF = 0]

If the process variable deviates from the set point by more than the value set, the program is suspended but continues automatically when the process variable returns within the set limits. The hysteresis value applies above and below set point under all program conditions.

Number of Program Repeats
[0 to 99 or infinite (\( nF \geq 100 \)]

•2 The engineering value is shown with an extra decimal place (up to a maximum of 3) for greater accuracy in setting the ramp rate.
4 CONFIGURATION MODE

4.1 Introduction
The Configuration Mode comprises two levels (5 and 6) as shown in Fig. 4.2.

Level 5 is divided into four frames. For most simple applications, it is only necessary to set up the parameters in the first frame.

Note.
When in the configuration level:
• All the LED indicators flash.
• All relays and logic outputs are turned off.
• The analog output reverts to 0% (4mA) output level.

4.2 Accessing the Configuration Mode – Fig. 4.1
To access the Configuration Mode, set the security switch to the 'Configure' position (Levels 1 to 4 cannot be accessed from this setting). When the configuration parameters are programmed, reset the security switch to the 'Normal' position. The Operating page is displayed automatically.
Fig. 4.2 Configuration Frames (Levels 5 and 6)
4.3 Basic Hardware and Configuration (Level 5)

4.3.1 Hardware Assignment and Input Type – Fig. 4.3

Note.
To select this frame from anywhere in this page, press the key for a few seconds.

'ABCD' Settings

The parameter to be changed is indicated by the letter which is flashing. Parameter options are shown in Fig. 4.3.

- **A** = Hardware configuration
- **b** = Input type and range
- **c** = Temperature units
- **d** = Process variable display decimal places

Note.
When the input type (parameter b) is changed, the range is set automatically to the maximum permissable for the input type selected.

Continued on page 34.

### Fig. 4.3 Hardware Assignment and Input Type
4.3.2 Alarms and Set Point Types – Fig. 4.4

Note. All relays are de-energized in the alarm state.

'EFGH' Settings

The parameter to be changed is indicated by the letter which is flashing. Parameter options are shown in Fig. 4.4.

- \( E \) = Alarm 1 type
- \( F \) = Alarm 2 type
- \( G \) = Alarm Hysteresis
- \( H \) = Set Point type

Continued on page 38.
**Note 1.** When custom alarm hysteresis is selected, the alarm hysteresis values are set individually in the set up level – see Section 3.3

**Note 2.** With remote set point tracking enabled, the local set point tracks the remote set point when in the remote set point mode.

**Fig. 4.4 Alarms and Set Point Types**
...4 CONFIGURATION MODE

...4.3.2 Alarms and Set Point Types – Fig. 4.4

Note. All relays are de-energized in the alarm state.

Loop Break Alarm
The loop break alarm indicates a fault in the control loop (e.g. failure of a heating element in a furnace). If the control output remains at maximum or minimum for a time exceeding the trip value (in seconds) without any response in the process value, the loop break alarm is activated.

Process and Deviation Alarms (High/Low) – Figs 4.5 and 4.6

Fig. 4.5 High and Low Process Alarm Action
Fig. 4.6 High and Low Deviation Alarm Action
4.3.3  Operator Access and Control Action – Fig. 4.7

'JKLN' Settings

The parameter to be changed is indicated by the letter which is flashing. Parameter options are shown in Fig. 4.7.

- \( J \) = Power recovery mode
- \( K \) = Operator selection enable – control functions
- \( L \) = Operator selection enable – set point functions
- \( n \) = Control action

Continued on page 40.

Fig. 4.9 Digital Input and Serial Communications
4.4 Ranges and Passwords (Level 6)

Ranges and Limits

Engineering (Display) Range

High Value

[-999 to 9999]

Low Value

[-999 to 9999]

Continued on next page...

1 The engineering range high and low values are automatically set to the maximum allowed value when thermocouple or RTD is selected in the configuration level – see Section 4.3.1.
4.4 Ranges and Passwords (Level 6)

- **Retransmission Range**
  - The retransmission range defines the engineering range to be transmitted.

- **Retransmission High (20mA) Analog Output 1**
  - [–999 to 9999 (in engineering units)]

- **Retransmission Low (4mA) Analog Output 1**
  - [–999 to 9999 (in engineering units)]

- **Retransmission High (20mA) Analog Output 2**
  - [–999 to 9999 (in engineering units)]

- **Retransmission Low (4mA) Analog Output 2**
  - [–999 to 9999 (in engineering units)]

•1 Only displayed if the analog output is configured to retransmit the process variable or control set point value.

•2 Only displayed if the retransmission option board is fitted.

Continued on next page…
...4 CONFIGURATION MODE

...4.4 Ranges and Passwords (Level 6)

Set Point Limit
The Set Point Limit defines the limits within which the local set point can be adjusted (these limits also apply to the remote set point).

High Limit
[–999 to 9999]

Low Limit
[–999 to 9999]

Fixed Set Point Values (1 to 4)
Select the set point values required in the multiple fixed set point facility.

Fixed Set Point 1
[–999 to 9999 (in engineering units)]

Fixed Set Point 4
[–999 to 9999 (in engineering units)]

Continued on next page…

•1 This limit applies to the local and remote set point values.

•2 Only displayed if the multiple fixed set point facility is selected.
4 CONFIGURATION MODE…

…4.4 Ranges and Passwords (Level 6)

- **Output 1 (Heat) High Limit**
  - [0% to 110%]

- **Output 2 (Cool) High Limit**
  - [0% to 110%]

- **Configured Output**
  - [–10% (–110% for heat/cool) to 110% or \text{LAST} (default)]
  - This output value is used when:
    - Manual control is selected using a digital input,
    - the process variable input fails,
    - the auto-tune fails.

- **Auto-Tune Password**
  - [0 to 9999 (default 0)]
  - Enables access to the auto-tune facility in the operating level (Level 1).

- **Setup Password**
  - [0 to 9999 (default 0)]
  - This password enables access to the set up levels (Levels 2, 3, and 4) and to the auto tune facility.

- **MODBUS Address**
  - [1 to 99]
  - This frame allows the MODBUS address to be set.

- **1** This value only applies in automatic mode.
  - The low limit is automatically set to 0.0% (–10% for analog outputs).

- **2** Only displayed if a heat/cool hardware configuration is selected.
5.1 Siting – Figs. 5.1 and 5.2

- Close to the Sensor
- At Eye Level
- Avoid Vibration

Fig. 5.1 General Requirements
5.1 Siting – Figs. 5.1 and 5.2

Temperature Limits

Humidity Limits

Environmental Limits

IP66/NEMA-4X (front panel)

IP20 (rear)

Use Screened/Grounded Cable

Fig. 5.2 Environmental Requirements
5.2 Mounting – Figs. 5.3 and 5.4
The instrument is designed for panel mounting (see Fig. 5.4). Overall dimensions are shown in Fig. 5.3.

Fig. 5.3 Overall Dimensions
...5.2 Mounting – Figs. 5.3 and 5.4

1. Cut a hole in the panel (see Fig. 5.3 for dimensions). Instruments may be close stacked to DIN 43835.

2. Insert the instrument into the panel cut-out.

3. Insert the instrument into the panel cut-out

4. Secure the panel clamp using the retaining screws. The rubber friction sleeve prevents over-tightening.

Fig. 5.4 Mounting Details
EC Directive 89/336/EEC

In order to meet the requirements of the EC Directive 89/336/EEC for EMC regulations, this product must not be used in a non-industrial environment.

5.3 Removing the Instrument from the Case – Fig. 5.5

1. Release the jacking screw cover

2. Turn the jacking screw counter-clockwise to pull the instrument from the case

Fig. 5.5 Removing the Instrument from the Case
5.4 Electrical Connections – Figs. 5.6 and 5.7

⚠️ **Warning.** Before making any connections, ensure that the power supply, any powered control circuits and high common mode voltages are switched off.

**Note.** If it is not possible to avoid strong electrical and magnetic fields, screened/grounded cables within earthed/grounded metal conduit must be used.

5.5 Relays, Arc Suppression and Outputs

5.5.1 Relay Contact Ratings
Relay contacts are rated at:

- 115/230V AC at 5A (non-inductive).
- 250V DC 25W max.

5.5.2 Arc Suppression – Fig. 5.6
Arc suppression components are fitted to relays 2 and 3 only. If relay 1 is required to switch inductive loads, the arc suppression component supplied must be fitted across the contacts used.

5.5.3 Logic Output
18V DC at 20mA.

Min load 900Ω.

Isolated from inputs (not isolated from analog Output 1), dielectric strength – 500V d.c. for 1 minute.

5.5.4 Control or Retransmission Analog Outputs
Max. load 15V (750Ω at 20mA).

Analog O/P 1 – Isolated from inputs (not isolated from logic Output), dielectric strength – 500V d.c. for 1 minute.

Analog O/P 2 – Non-isolated.
**Note.** Analog Output 1 and the logic output use a common positive terminal, capable of driving both outputs simultaneously.

---
