It is the policy of OMEGA Engineering, Inc. to comply with all worldwide safety and EMC/EMI regulations that apply. OMEGA is constantly pursuing certification of its products to the European New Approach Directives. OMEGA will add the CE mark to every appropriate device upon certification.

The information contained in this document is believed to be correct, but OMEGA accepts no liability for any errors it contains, and reserves the right to alter specifications without notice.

WARNING: These products are not designed for use in, and should not be used for, human applications.

Foreword

Thank you for purchasing the OMEGA RD100B Recorder. This manual describes concisely the operating procedures of the RD100B Recorder. To ensure correct use, please read this manual thoroughly before beginning operation. The following two manuals, in addition to this one, are provided as manuals for the RD100B Recorder. Please read all of them.

Electronic Manuals Provided on the Accompanying CD-ROM

Opening the Electronic Manuals

The PDF files of the manuals are provided on the accompanying CD-ROM. When the CD-ROM is inserted in the PC’s CD-ROM drive, a list of manuals on the CD-ROM is displayed. Click a manual title to open the manual. If the list of manuals is not displayed automatically, open the manual in the My Computer RD100B_RD1800B_manual directory.

Notes

- The contents of this manual are subject to change without prior notice as a result of continuing improvements to the instrument’s performance and functions.
- Every effort has been made in the preparation of this manual to ensure the accuracy of its contents. However, should you have any questions or find any errors, please contact OMEGA.
- Copying or reproducing all or any part of the contents of this manual without the permission of OMEGA is strictly prohibited.
- The TCP/IP software of this product and the document concerning the TCP/IP software have been developed/created based on the BSD Networking Software, Release 1 that has been licensed from the University of California.

Trademarks

- All the brands or names of OMEGA products used in this manual are either trademarks or registered trademarks of OMEGA.
- Microsoft, MS-DOS, Windows, Windows NT, and Windows XP are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Adobe, Acrobat, and PostScript are trademarks of Adobe Systems Incorporated.
- For purposes of this manual, the TM and ® symbols do not accompany their respective trademark names or registered trademark names.
- Company and product names that appear in this manual are trademarks or registered trademarks of their respective holders.

Safety Precautions

The general safety precautions described here must be observed during all phases of operation.

- **Safety Standards and EMC Standards**
  - This recorder conforms to IEC safety class I (provided with terminal for protective grounding), Installation Category II, Measurement category II (CAT II), and EN61326-1 (EMC standard), class A (use in a commercial, industrial, or business environment).
  - This recorder is designed for indoor use.

- **About This Manual**
  - This manual should be read by the end user.
  - Read this manual thoroughly and have a clear understanding of the product before operation.
  - This manual explains the functions of the product. OMEGA does not guarantee that the product will suit a particular purpose of the user.
  - Under absolutely no circumstances may the contents of this manual be transcribed or copied, in part or in whole, without permission.
  - The contents of this manual are subject to change without prior notice.
  - Every effort has been made in the preparation of this manual to ensure the accuracy of its contents. However, should you have any questions or find any errors or omissions, please contact OMEGA.

- **Precautions Related to the Protection, Safety, and Alteration of the Product**
  - The following safety symbols are used on the product and in this manual.
    - “Handle with care.” To avoid injury and damage to the instrument, the operator must refer to the explanation in the manual.
    - Protective ground terminal
    - AC
    - “High temperature.” To avoid injury caused by hot surface, do not touch locations where this symbol appears.

- For the protection and safe use of the product and the system controlled by it, be sure to follow the instructions and precautions on safety that are stated in this manual whenever you handle the product. Take special note that if you handle the product in a manner that violate these instructions, the protection functionality of the product may be damaged or impaired. In such cases, OMEGA does not guarantee the quality, performance, function, and safety of the product.
- When installing protection and/or safety circuits such as lightning protection devices and equipment for the product and control system or designing or installing separate protection and/or safety circuits for fool-proof design and fail-safe design of the processes and lines that use the product and the control system, the user should implement these using additional devices and equipment.
- If you are replacing parts or consumable items of the product, make sure to use parts specified by OMEGA.
- This product is not designed or manufactured to be used in critical applications that directly affect or threaten human lives. Such applications include nuclear power equipment, devices using radioactivity, railway facilities, aviation equipment, air navigation facilities, aviation facilities, and medical equipment. If so used, it is the user’s responsibility to include in the system additional equipment and devices that ensure personnel safety.
- Do not modify this product.
**WARNING**

- **Power Supply**
  Ensure that the source voltage matches the voltage of the power supply before turning ON the power.

- **Protective Grounding**
  Make sure to connect the protective grounding to prevent electric shock before turning ON the power.

- **Necessity of Protective Grounding**
  Never cut off the internal or external protective earth wire or disconnect the wiring of the protective earth terminal. Doing so invalidates the protective functions of the instrument and poses a potential shock hazard.

- **Defect of Protective Grounding**
  Do not operate the instrument if the protective earth or fuse might be defective. Make sure to check them before operation.

- **Do Not Operate in an Explosive Atmosphere**
  Do not operate the instrument in the presence of flammable liquids or vapors. Operation in such environments constitutes a safety hazard.

- **Do Not Remove Covers**
  The cover should be removed by OMEGA’s qualified personnel only. Opening the cover is dangerous, because some areas inside the instrument have high voltages.

- **External Connection**
  Connect the protective grounding before connecting to the item under measurement or to an external control unit.

- **Damage to the Protective Structure**
  Operating the recorder in a manner not described in this manual may damage its protective structure.

---

**Exemption from Responsibility**

- OMEGA makes no warranties regarding the product except those stated in the WARRANTY that is provided separately.
- OMEGA assumes no liability to any party for any loss or damage, direct or indirect, caused by the user or any unpredictable defect of the product.

**Handling Precautions of the Software**

- OMEGA makes no warranties regarding the software accompanying this product except those stated in the WARRANTY that is provided separately.
- Use the software on a single PC.
- You must purchase another copy of the software, if you are to use the software on another PC.
- Copying the software for any purposes other than backup is strictly prohibited.
- Please store the original media containing the software in a safe place.
- Reverse engineering, such as decompiling of the software, is strictly prohibited.
- No portion of the software supplied by OMEGA may be transferred, exchanged, sublet, or leased for use by any third party without prior permission by OMEGA.

**How to Use This Manual**

This manual covers information regarding the recorders with English as the display/recording language (suffix code “2”). The following markings are used in this manual.

\[\text{WARNING}\]

Improper handling or use can lead to injury to the user or damage to the instrument. This symbol appears on the instrument to indicate that the user must refer to the user’s manual for special instructions. The same symbol appears in the corresponding place in the user’s manual to identify those instructions. In the manual, the symbol is used in conjunction with the word “WARNING” or “CAUTION.”

**CAUTION**

Calls attention to actions or conditions that could cause light injury to the user or damage to the instrument or user’s data, and precautions that can be taken to prevent such occurrences.

**Note**

Calls attention to information that is important for proper operation of the instrument.

**Checking the Contents of the Package**

Unpack the box and check the contents before operating the instrument. If some of the contents are not correct or missing or if there is physical damage, contact the dealer from which you purchased them.

**RD100B Recorder**

A name plate is affixed to the case. Check that the model name and suffix code given on the name plate on the rear panel match those on your order.

**NO. (Instrument Number)**

When contacting the dealer from which you purchased the instrument, please give them the instrument number.

### Optional Accessories (Sold Separately)

The optional accessories below are available for purchase separately. If you make an order, make sure that all contents are present and undamaged.

For information about ordering accessories, contact the dealer from which you purchased the recorder.

---

Removing the Packing Materials

Open the door, put your finger on the tab at the lower left of the display and key panel section, and open the display and key panel section.

- **Pen Model**
  - Disposable felt pen
  - Plotter pen
  - Mounting bracket
  - Manuals for the RD100B/RD1800B (CD-ROM)
  - RD100B Recorder Operation Guide IM 04P01B01-02E

- **Dot Model**
  - Disposable felt pen (Red, Green, Blue, Violet)
  - Plotter pen (Purple)
  - Mounting bracket 89900BX
  - Shunt resistor for the screw terminal (standard)
  - Shunt resistor for the clamped input terminal (/H2)

---

**CAUTION**

To protect the hinges, do not apply vertical force on the display and key panel section.
Recorder's Version and Functions Described in This Manual

The contents of this manual corresponds to the recorder with version 1.11.

RD100B Versions and Functions

</tbody>
</table>

• Checking the Version Number
  You can check the version number on the System display. The System display cannot be shown at the factory default condition.
  First, register the System display to the display screen.
  • Procedure of registering the System display to the display screen: See Switching the Display Screen on Page 40.
  • Procedure of displaying the System display: The screen switches each time the [DISP] key is pressed. Press the [DISP] key repeatedly until System display is shown. The displayed contents on the System display switches every 3 seconds. Check the number shown by the “Version:” item.

Software (Sold Separately)

The RD100B Configuration Software cannot set the new functions (indicated above) available on RD100B version 1.11. The new functions are planned to be supported on the configuration software to be released after November 2005.
Function Introduction

Function Introduction

The RD100B Recorder (hereafter referred to as the recorder) can be used to assign DC voltage, 1-5V, thermocouple, RTD, and contact or voltage ON/OFF signal to channels for measurement. The measured results are recorded with pens or dots on a chart paper that is fed at a constant speed. The pen model can record up to 4 channels; the dot model can record up to 6 channels.

![RD100B Recorder](image)

**Recording example (dot model)**

**Alarms**

For each channel, various alarms such as high limit alarm and low limit alarm can be assigned to monitor the measured values. Alarm output relays can be used to output contact signals when alarms occur (/A1, /A2, and /A3 options).

**Recording**

The measured results are recorded with pens or dots on a chart paper (trend recording). The chart speed can be selected from 5 to 12000 mm/h on the pen model and 1 to 1500 mm/h on the dot model.

In addition to trend recording, various types of information can be printed on the chart paper such as numeric measured values, alarm occurrence/release, and predefined messages.

Also, the recorder settings can be printed.

**Internal Light**

A light is provided for easier viewing of the recording area of the chart paper.

**Display**

Measured values can be displayed numerically or using bar graphs on the large display. Also, alarm status and chart speed can be displayed.

**Communication Functions**

Using the Ethernet communication interface (/C7 option) or the RS-422A/485 communication interface (/C3 option), the measured values on the recorder can be output to a computer or a computer can be used to control the recorder.

For details on communication functions, see the *RD100B /RD1800B Communication Interface User's Manual* on the CD-ROM.

**Other Main Functions**

The computation function (/M1 option) can be used to perform various computations from four arithmetic operations to statistical calculations on 8 and 12 computation channels on the pen model and dot model, respectively. The computed results can be recorded.

The remote control function (/R1 option) can be used to control the recording start/stop and other operations of the recorder by applying contact signals to the dedicated terminals.

The FAIL/chart end detection and output function (/F1 option) can be used to output contact signals when errors are detected on the recorder or when the chart paper runs out.
Names of Parts

Front

- **Door**: Hold the tab at the lower left and pull to open.
- **Tag plate**: Used to write channel names.
- **Chart cassette**: Holds the chart paper.
- **Power switch**: Turns ON/OFF the power each time the switch is pressed.
- **Display and key panel**: Hold the tab at the lower left and pull to open.
- **Mounting hole**: There is one hole on each of the top, bottom, left, and right panels. The hole is covered with a seal.
- **Name plate**: The model name is written on the name plate.
- **Recording pen**: Records the measured value.
- **Dot model**: Ink ribbon—Six-color ink.
- **Plotter pen**: Prints various types of information.
- **Printer carriage**: Records measured values and prints various types of information.
- **Display and key panel (see the next page)**
  - There is an internal light on the bottom section of the display and key panel. It lights up the recording area of the chart paper.

Rear Panel

- **Heatsink**: Dissipates the internal heat.
- **Power terminal block**: The power terminal and protective ground terminal.
- **Optional terminal block**: This is where terminals or ports used by options such as alarm output relays and communication interface are installed.
- **Measuring input terminal block**: Measuring input terminals.
- **Ethernet port (/C7 option)**
### Display and Key Panel

**Status display**
Displays the following information.
- **RECORD**: Illuminates while recording measured values.
- **KEY LOCK**: Illuminates when key lock is enabled.
- **MATH**: Illuminates when computation on the computation function (/M1 option) is in progress.
- **CHART END**: Illuminates when the chart paper is out (/F1 option).
- **ALARM 1 to 6**: Illuminates when an alarm is occurring on channels 1 to 6.

**Main display**
Displays the measured values. Also, displays the setup screen when setting functions.

<td>Confirms the setup item or value.</td>
</tr>
</tbody>
</table>

**Seven keys are available.**
For all keys except RCD, functions marked above the keys are enabled when setting functions or when the FUNC key or the DISP MENU key is pressed.

**During normal operation**
- **CH UP key**: Switches the displayed channel. (when manual switching is specified)
- **FEED key**: Feeds the chart paper.
- **DISP MENU key**: Hold this key down for 3 seconds to switch to the data display setup screen. Hold this key down for 3 seconds also to exit from the data display setup screen.
- **FUNC key**: Used when executing manual printout, message printout, etc.
- **DISP key**: Switches the screen in the main display.
- **MENU key**: Hold this key down for 3 seconds to enter Setting mode. Hold this key down for 3 seconds also to exit from Setting mode.
- **RCD key**: Starts/stops recording.
Installing/Wiring the Recorder

Installation Location

Install the recorder indoors in a location that meets the following conditions.

- **Instrument Panel**
  The recorder is designed for panel mounting.

- **Well-Ventilated Location**
  To prevent overheating, install the recorder in a well-ventilated location.
  For the panel cut dimensions when arranging multiple recorders, see the next page.
  Follow the panel cut dimensions providing adequate space between instruments when other instruments are arranged on the panel.

- **Minimum Mechanical Vibrations**
  Choose an installation location with the minimum mechanical vibration.
  Installing the recorder in a location with large mechanical vibration not only causes adverse effects on the mechanism but also may hinder normal recording.

- **Horizontal**
  Install the recorder horizontally (However, the recorder can be inclined up to 30 degrees backwards for panel mounting).

**Note**

- Condensation may occur if the recorder is moved to another place where both the ambient temperature and humidity are higher, or if the temperature changes rapidly. In addition, measurement errors will result when using thermocouples. In this case, let the recorder adjust to the new environment for at least one hour before using it.
- The chart paper may be adversely affected by a rapid change in the ambient temperature and humidity.

Do not install the recorder in the following places.

- **Outdoors**

- **In Direct Sunlight or Near Heat Sources**
  Install the recorder in a place with small temperature fluctuations near room temperature (23°C). Placing the recorder in direct sunlight or near heat appliances can cause adverse effects on the internal circuitry.

- **Where an Excessive Amount of Soot, Steam, Moisture, Dust, or Corrosive Gases Are Present**
  Soot, steam, moisture, dust, and corrosive gases will adversely affect the recorder. Avoid such locations.

- **Near Strong Magnetic Field Sources**
  Do not bring magnets or instruments that produce electromagnetic fields close to the recorder. Operating the recorder in strong magnetic fields can cause errors in the measurements.

Installation Procedure

The recorder should be mounted on a steel panel of thickness 2 mm to 26 mm.

1. Insert the recorder from the front side of the panel (see the mounting diagram on the next page).
2. Mount the recorder to the panel using the mounting brackets that come with the package.
   - Use two brackets to support the top and bottom or the left and right sides of the case (remove the seal that is covering the holes for the mounting brackets beforehand).
   - The proper torque for tightening the mounting screws is 0.7 to 0.9 Nm.
   - Mount the recorder to the panel according to the procedure below.
     - First, attach the two mounting brackets and temporarily fasten the attachment screws.
Next, fix the recorder in place by tightening the attachment screws with the appropriate torque. When the recorder is approximately perpendicular to the panel as you fasten the screws, press the mounting bracket against the case so that they are in contact with each other.

**CAUTION**

Tightening the screws too much can deform the case or damage the bracket.

Unless otherwise specified, tolerance is ±3% (however, tolerance is ±0.3 mm when below 10 mm).
Input Signal Wiring

**WARNING**

- To prevent electric shock while wiring, ensure that the power supply source is turned OFF.

**CAUTION**

- If a strong tension is applied to the cable wired to the recorder, the terminals of the recorder and/or the cable can be damaged. In order to prevent tension from being applied directly on the terminals, fasten all wiring cables to the rear of the mounting panel.
- Do not apply a voltage exceeding the following value to the input terminals as this may damage the recorder.
  - Maximum input voltage
    - Voltage range less than or equal to 200 mVDC, TC, RTD, and DI: ±10 VDC
    - Ranges other than those listed above: ±60 VDC
  - Maximum common-mode voltage
    - ±60 VDC (under measurement category II conditions)
- The recorder is an INSTALLATION CATEGORY II product.

**Precautions to Be Taken While Wiring**

Take the following precautions when wiring the input signal cables.

It is recommended that crimp-on lug with insulation sleeves (designed for 4-mm screws) be used when connecting the input/output signal wires to the terminals.

However, this does not apply clamped terminals (/H2).

**Crimp-on lug with insulation sleeves (for 4 mm screws)**

For clamped terminals (/H2), the following wire is recommended.

- Conductive cross-sectional area for single wire: 0.14 mm² to 1.5 mm², stranded wire: 0.14 mm² to 1.0 mm²
- Length of the stripped section of the wire: Approx. 5 mm

**Take measures to prevent noise from entering the measurement circuit.**

- Move the measurement circuit away from the power cable (power circuit) and ground circuit.
- It is desirable that the object being measured does not generate noise. However, if this is unavoidable, isolate the measurement circuit from the object. Also, ground the object being measured.
- Shielded wires should be used to minimize noise caused by electrostatic induction. Connect the shield to the ground terminal of the recorder as necessary (make sure you are not grounding at two points).
- To minimize noise caused by electromagnetic induction, twist the measurement circuit wires at short, equal intervals.
- Make sure to earth ground the protective ground terminal through minimum resistance (less than 100 Ω).

When using internal reference junction compensation on the thermocouple input, take measures to stabilize the temperature at the input terminal.

- Always use the terminal cover.
- Do not use thick wires which may cause large heat dissipation (cross sectional area of 0.5 mm² or less recommended).
- Make sure that the ambient temperature remains reasonably stable. Large temperature fluctuations can occur if a nearby fan turns ON or OFF.

**Connecting the input wires in parallel with other devices can cause signal degradation, affecting all connected devices.**

If you need to make a parallel connection, then

- Turn the burnout detection function OFF.
- Ground the instruments to the same point.
- Do not turn ON or OFF another instrument during operation. This can have adverse effects on the other instruments.
- RTDs cannot be wired in parallel.
**Wiring Procedure**  
A terminal cover is screwed in place on the measuring input terminal block on the rear panel.  
A label indicating the terminal arrangement is affixed to the cover.

1. Turn OFF the recorder and remove the terminal cover.
2. Connect the signal wires to the terminals.

**Note**  
Input signal wires of diameter less than or equal to 0.3 mm may not be secured firmly for clamped terminals (/H2). Fold over the conducting section of the wire, for example, to make sure that the wire is securely connected to the clamped terminal.

3. Replace the terminal cover and fasten it with screws.  
The proper torque for tightening the screws is 0.6 N-m.

### Pen Model

![Pen Model Schematic](image)

### Dot Model

![Dot Model Schematic](image)

## Measuring Input Wiring

**Thermocouple input**

- RTD input terminals A and B on the dot model are isolated on each channel. Terminal b is shorted internally across all channels. However, for 3 legs isolated RTDs (/N2 option), input b is also isolated for each channel.
Optional Terminal Wiring

**WARNING**

- To prevent electric shock while wiring, ensure that the power supply source is turned OFF.
- If a voltage of more than 30 VAC or 60 VDC is to be applied to the output terminals, use ring-tongue crimp-on lugs with insulation sleeves on all terminals to prevent the wires from slipping out when the screws become loose. Furthermore, use double-insulated wires (dielectric strength of 2300 VAC or more) for the signal wires on which a voltage of more than 30 VAC or 60 VDC is to be applied. For all other wires, use basic insulated wires (dielectric strength of 1390 VAC). To prevent electric shock, attach the terminal cover after wiring and make sure not to touch the terminals.

**CAUTION**

- To prevent fire, use signal wires having a temperature rating of 70°C or more.
- If a strong tension is applied to the cable wired to the recorder, the terminals of the recorder and/or the cable can be damaged. In order to prevent tension from being applied directly on the terminals, fasten all wiring cables to the rear of the mounting panel.

**Wiring Procedure**

As shown in the figure below, the optional terminal block is located on the rear panel. The optional terminal block is provided on the recorder when an option that requires input/output is installed such as the alarm output relay (/A1, /A2, or /A3 option), FAIL/chart end output (/F1 option), and remote control function (/R1 option). A terminal cover is screwed in place on the measuring input terminal block. A label indicating the terminal arrangement is affixed to the terminal block.

1. Turn OFF the recorder and remove the terminal cover.
2. Connect the input signal wires to the terminals.
3. Replace the terminal cover and fasten it with screws.
   The proper torque for tightening the screws is 0.6 N·m.

**Note**

To reduce noise, use a shielded cable for the wiring of the remote control input terminals. Connect the shield to the ground terminal of the recorder.

---

![Diagram of terminal block with connections](image)
Alarm Output Relay Terminals and FAIL/Chart End Output Relay Terminals
NC (Normally Closed), C (Common), NO (Normally Opened)
Alarm output terminals 01 to 06 are expressed as I01 to I06 in the alarm output relay settings.

Remote Control Input Terminals
1 to 5 (Remote control input terminals), C (Common)
Remote control input terminals 1 to 5 are expressed as numbers 1 to 5 in the remote control input settings.

Alarm output
FAIL/chart end output
Relay contact output

Remote control input
Relay contact input
(Voltage-free contact)

Transistor input
(Open collector)

Relay Contact Output Specifications
Output format: Relay contact
Contact rating: 250 VAC (50/60 Hz)/3 A, 250 VDC/0.1 A (for resistor load)
Dielectric strength: 1500 VAC at 50/60 Hz for one minute (between output terminals and the ground terminal)

Relay Contact Input/Transistor Input Specifications
• Voltage-free contact: Contact closed at 200 Ω or less and contact open at 100 kΩ or greater
• Open collector: 0.5 V or less (30 mADC) when turned ON, leakage current of 0.25 mA or less when turned OFF

Input format: Photocoupler isolation (shared common)
Dielectric strength: 500 VDC for one minute between input terminals and the ground terminal
Power Supply Wiring

**WARNING**

- To prevent electric shock when wiring, ensure the main power supply is turned OFF.
- To prevent the possibility of fire, use 600 V PVC insulated wire (JISC3307) or an equivalent wire for power wiring.
- Make sure to earth ground the protective earth terminal through a grounding resistance less than 100 Ω before turning ON the power.
- Use crimp-on lugs (designed for 4 mm screws) for power and ground wiring termination.
- To prevent electric shock, make sure to close the transparent cover for the power supply wires.
- Make sure to provide a power switch (double-pole type) on the power supply line in order to separate the recorder from the main power supply. Put an indication on this switch as the breaker on the power supply line for the recorder and indications of ON and OFF.
- Switch specifications
  - Rated power current: 1 A or more
  - Rated rush current: 60 A or more
  - Use a switch complied with IEC 60947-1, 3.
- Connect a fuse between 2 A and 15 A in the power supply line. Use a fuse approved by CSA (for the use in North America) or VDE (for the use in Europe).
- Do not add a switch or fuse to the ground line.

Use a power supply that meets the following conditions:

<table>
<thead>
<tr>
<th>Item</th>
<th>Power Supply Specifications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rated supply voltage</td>
<td>100 to 240 VAC</td>
</tr>
<tr>
<td>Allowable power supply voltage range</td>
<td>90 to 132/180 to 264 VAC</td>
</tr>
<tr>
<td>Rated power supply frequency</td>
<td>50/60 Hz</td>
</tr>
<tr>

<td>50/60 Hz ± 2%</td>
</tr>
<tr>
<td>Maximum power consumption</td>
<td>Pen model: 40 VA, dot model: 40 VA</td>
</tr>
</tbody>
</table>

**Note**

Do not use a supply voltage in the range 132 to 180 VAC, as this may have adverse effects on the measurement accuracy.

**Wiring Procedure**

The power supply terminals and protective ground terminals are located on the rear panel.

1. Turn OFF the power switch on the recorder and open the power terminal cover.
2. Wire the power cord and the protective ground cord to the power supply terminals. Use ring-tongue crimp-on lugs (designed for 4 mm screws).
3. Close the power supply terminal cover and secure it with the screw. The proper torque for tightening the screws is 0.6 N-m.

**Turning ON/OFF the Power Switch**

The power switch is located inside the door at the lower right. The power switch is a push button. Press once to turn it ON and press again to turn it OFF. When the power switch is turned ON, a self-diagnosis program runs for a few seconds, and the recorder is ready for operation.
Common Operations and Menu Structure

Execution Modes

The recorder has three execution modes.

**Operation Mode**

This mode is used for normal recording operation. The recorder enters this mode when the power is turned ON.

**Setting Mode**

This mode is used to set the input range, alarms, chart speed, and other parameters. These settings can be changed while recording is in progress. However, the input range of measurement channels and the computing equation, unit, constant, and TLOG setting of computation channels cannot be changed while computation (/M1 option) is in progress.

**Basic Setting mode**

This mode is used to set the basic specifications of the recorder such as the thermocouple burnout detection function and the alarm output relay operation. This mode cannot be entered while the recorder is recording or while computation is in progress on the computation function (/M1 option). Measurement, recording, and alarm detection cannot be carried out in this mode.

Operation Sequence

This section explains the operations that need to be carried out when using the recorder for the first time.

- **Preparing to Record**
  
  Load the chart paper and pens (pen model) or ribbon cassette (dot model). Change the date/time if necessary.
  
  For the operating procedure, see page 24.

- **Setting the Channel Input Range and Other Parameters**
  
  Set the measurement conditions suitable for the object being measured.
  
  This manual explains the following operations.
  
  - Setting the input range and alarm (see page 30 for the procedure)
  
  - Changing the chart speed (see page 37 for the procedure)

- **Recording/Displaying Data**
  
  Start/Stop the recording operation and carry out various types of printouts. Also, switch the display screen and change the displayed contents.
  
  For the operating procedure, see page 36.
Key Operation

Entering Setting Mode

Hold down the **MENU** key for 3 seconds.
The Setting mode display appears. The top and bottom lines are the setup item and comment, respectively.
The section that is blinking is the setup item that you change. In this manual, the section that you change appears shaded.

![Setup Item and Comment](image)

In Setting mode, the panel keys are set to the functions marked above the keys.

![Panel Keys](image)

Exiting from Setting Mode (Returning to Operation Mode)

Hold down the **MENU** key for 3 seconds.
The recorder returns to operation mode.

Entering Basic Setting Mode

Hold down the **MENU** key for 3 seconds to enter Setting mode. Next, hold down both the **DISP** (DISP) key and the **FUNC** (FUNC) key for 3 seconds.
The Basic Setting mode display appears. The top and bottom lines are the setup item and comment, respectively.
The section that is blinking in the setup item that you change.

![Setup Item and Comment](image)

Exiting from Basic Setting Mode (Returning to Operation Mode)

Press the **ESC** (MENU) key several times to return to the **Basic** screen.
Press the **DISP** (DISP) key to select **End** and then press the **CH UP** (CH UP) key. The setup save screen appears.

![Save Settings](image)

Press the **DISP** (DISP) key to select **Store** and then press the **CH UP** (CH UP) key. The setting is applied, and the screen returns to Operation mode. If you select **Abort** and press the **CH UP** (CH UP) key, the setting is discarded, and the screen returns to Operation mode.

![Save Settings](image)
Changing the Settings

Note

The comment line shows useful information such as a description of the setup item and the range of selectable values. Read the comment and change the items as necessary.

The selected item change each time you press the \( \uparrow \downarrow \) (DISP) key. The selected item change in reverse order if you press the \( \uparrow \downarrow \) (DISP) while holding down the SHIFT (FEED) key.

Mode=TC

Possible choices

\( \uparrow \downarrow \) key

This manual denotes the operation of pressing a key while holding down the SHIFT (FEED) key as SHIFT + the other key (for example: SHIFT + \( \uparrow \downarrow \) key).

After you make a selection, press the \( \leftarrow \rightarrow \) (CH UP) key. The next screen appears.

When the Setting complete screen is displayed, the changed item is applied.

Using the ESC Key

If you press the ESC (MENU1) key, the operation is cancelled, and the display returns to a higher level menu. In other words, if you do not show the Setting complete screen, the changes you made up to that point are discarded.

Press the ESC (MENU1) key while holding down the SHIFT (FEED) key to show or hide the comment that is displayed at the bottom half of the screen.

Entering Values

Press the \( \leftarrow \rightarrow \) (FUNC) key to move the cursor to the right. Press the SHIFT (FEED) + \( \leftarrow \rightarrow \) (FUNC) to move the cursor to the left.

Press the \( \uparrow \downarrow \) (DISP) key to increment the value. Press the SHIFT (FEED) + \( \uparrow \downarrow \) (DISP) key to decrement the value.

You repeat these steps to enter the value.

When you press the \( \leftarrow \rightarrow \) (CH UP) key, the change is applied and the next screen is displayed.
Entering Characters
Press the $\boldsymbol{\rhd}$ (FUNC) key to move the cursor to the right. Press the $\boldsymbol{\leftarrow}$ (FUNC) + $\boldsymbol{\rhd}$ (FUNC) to move the cursor to the left.

The character type changes each time you press the CHARACTER (MENU) key. The character type changes in reverse order each time you press the $\boldsymbol{\leftarrow}$ (FEED) + CHARACTER (MENU) key.

The character type changes in the following order: uppercase alphabet, lowercase alphabet, numbers, and symbols.

The character changes each time you press the $\nabla$ (DISP) key. The character changes in reverse order each time you press the $\boldsymbol{\leftarrow}$ (FEED) + $\nabla$ (DISP) key.

You repeat these steps to enter the character.

When you press the $\boldsymbol{\rhd}$ (CH UP) key, the change is applied and the next screen is displayed.

- **Inserting a Character**
  Press the $\boldsymbol{\rhd}$ (FUNC) key to move the cursor to the position where the character is to be inserted.
  Press the $\nabla$ (DISP) key to show Ins DISP and then press the $\nabla$ (DISP) key. A space for one character is inserted. Enter the character.

- **Deleting a Character**
  Use the $\boldsymbol{\rhd}$ (FUNC) key to move the cursor to the character to be deleted.
  Press the CHARACTER (MENU) key to show Del DISP and then press the $\nabla$ (DISP) key. The character is deleted.

- **Deleting an Entire Character String**
  Press the CHARACTER (MENU) key to show Clear DISP and then press the $\nabla$ (DISP) key. The entire character string is deleted.

- **Copying & Pasting a Character String**
  Show the copy source character string.
  Press the CHARACTER (MENU) key to show Copy DISP and then press the $\nabla$ (DISP) key. The character string is saved to the memory.
  Show the copy destination.
  Press the CHARACTER (MENU) key to show Paste DISP and then press the $\nabla$ (DISP) key. The character string is pasted.

* When the $\boldsymbol{\rhd}$ (FUNC), $\nabla$ (DISP), or CHARACTER (MENU) key is pressed while holding down the $\boldsymbol{\leftarrow}$ (FEED) key, the operation is reversed as when the respective key is pressed by itself.
Menu Structure of Setting Mode

References to the RD100B Recorder User’s Manual are given in parentheses.

Key operation

Hold down the MENU key for 3 seconds in Operation mode to enter Setting mode.

- : Use the \( \downarrow \) key.

- : Use the \( \uparrow \) key.

Hold down the MENU key for 3 seconds in Setting mode to return to Operation mode.

Hold down both the \( \downarrow \) and \( \uparrow \) keys for 3 seconds in Setting mode to enter Basic Setting mode.

- are not displayed in the default condition. To display these items, settings must be changed in Basic Setting mode.
Menu Structure of Basic Setting Mode

References to the *RD100BRecorder User’s Manual* are given in parentheses.

Key operation:
- Hold down both the \(\uparrow\) and \(\downarrow\) keys for 3 seconds in Setting mode to enter this mode.
- Use the \(\downarrow\) key.
- Use the \(\uparrow\) key.

Common Operations and Menu Structure
Preparing to Record

Loading or Replacing the Chart Paper

CAUTION

- Do not install or remove the chart cassette with the chart paper guide open. This may damage the stopper.
- Continuing to record or print without the chart paper on the dot model can cause damage to the chart cassette platen (the cylindrical section that holds the paper during the recording operation). Be sure to replace the chart paper ahead of time.

Loading the Chart Paper

1. Open the door. If recording is in progress, press the RCD key to stop the recording.
2. Remove the chart cassette. Gently pressing the left and right stoppers inward. The bottom section of the chart cassette comes out. Gently lift the chart cassette and pull it out from the recorder case.
3. Open the chart holder and the chart paper guide.

This sheet is provided on models with the chart end detection function (/F1 option). Do not remove or bend this sheet.
4. Load the chart paper.
Riffle the chart thoroughly before loading. Make sure that the sprocket teeth of the chart drives are properly engaged in the chart paper perforations. Make sure not to load the chart paper backwards.

5. Close the chart holder and close the chart paper guide.

6. Replace the chart cassette back into the recorder.
Align the left and right projections with the guide grooves of the recorder and press the entire chart cassette into the recorder case. The chart cassette is fixed in place with the stoppers.

Feeding the Chart Paper

7. Press the **FEED** key to assure that the chart moves two or more folds smoothly into the chart receiver.
If it moves unsteadily, do the installing procedure again.
CAUTION

- Do not press or pinch the felt tip to prevent deformation.
- Do not move the penholder left or right by force to protect the driving mechanism.
- Make sure to remove the pen cap before installation.
- Use pen caps of the same ink color. If a pen cap of a different ink color is used on the pen, the remaining ink in the cap may be absorbed through the pen tip, and the ink may change its color.

1. Open the door.
   If recording is in progress, press the RCD key to stop the recording.
2. Open the display and key panel section.
   You can open the display and key panel section by holding the tab at the lower left and pulling it toward you.
3. Hold the felt pen cartridge and pull it out from the pen holder.
   If the pen (pen holder) is at a position that is not easily accessible, see “When the Pen (Pen Holder) Is at a Position That Is Not Easily Accessible” below.
4. Remove the cap from the new felt pen and insert the pen firmly into the pen holder.

   From the top: pen 1 (red), pen 2 (green), pen 3 (blue), and pen 4 (violet).

5. Return the display and key panel section to its original position.

When the Pen (Pen Holder) Is at a Position That Is Not Easily Accessible
If the pen (pen holder) is at a position that is not easily accessible, carry out the procedure below to move it near the center position.

1. Press the FUNC key.
2. Press the ▼△ (DISP) key several times to display the Pen exchange screen.

   Func=Pen exchange

3. Press the ◄◆ (CH UP) key.
   The pen (pen holder) moves near the center position, and the Pen exchange = End screen appears.

Note
   When the pen moves, a line is drawn on the chart paper.

   4. Replace the pen.
   5. Return the display and key panel section to its original position, and press the ◄◆ (CH UP) key.
      The screen returns to the data display screen.

* When the ◄◆ or ▼△ key is pressed while holding down the SHIFT key, the operation is reversed as when the respective key is pressed by itself.
Preparing to Record

Installing/Replacing the Plotter Pen (Pen Model)

1. Open the door.
   If recording is in progress, press the RCD key to stop the recording.
2. Open the display and key panel section.
3. Hold the plotter pen cartridge and pull it out from the pen holder.
4. Remove the cap from the new plotter pen and insert the pen firmly into the pen holder.
5. Return the display and key panel section to its original position.

Installing/Replacing the Ribbon Cassette (Dot Model)

**CAUTION**
- Improper cassette insertion may cause the color to change or damage the ribbon.
- Do not apply upward force to the printer carriage. If you do, the carriage position may be offset, and the recorder may not print correctly.

1. Open the door.
   If recording is in progress, press the RCD key to stop the recording.
2. Press the FUNC key.
3. Press the DISP key several times to display R.exchange. Func=R. exchange
4. Press the CH UP key.
   The printer carriage moves near the center position, and R. exchange = End is displayed.
5. Open the display and key panel section.
   You can open the display and key panel section by holding the tab at the lower left and pulling it toward you.

**Note**
If the recorder is OFF, hold the printer carriage and move it near the center position.

* When the key or key is pressed while holding down the key, the operation is reversed as when the respective key is pressed by itself.
6. Remove the ribbon cassette.
Pull the left-hand part of the ribbon cassette so that the cassette holder tab disengages, and pull the ribbon cassette out from the recorder case.

7. Install a new ribbon cassette.
First, insert the right-hand part and then the left-hand part into the cassette holder.
Check that the cassette is properly engaged with the cassette holder tab.
If inserting the ribbon cassette is difficult, turn the ribbon feeding knob in the direction of the arrow to align the ribbon feeding shaft of the cassette with the ribbon feeding shaft of the holder.

8. Turn the ribbon feeding knob in the direction of the arrow a half turn or more to check that the ribbon is feeding properly. If the ribbon is loose, turn the knob in the direction of the arrow to tighten it.

9. Return the display and key panel section to its original position, and press the (CH UP) key.
The screen returns to the data display screen.
Preparing to Record

Checking or Setting the Date/Time

Checking the Date/Time
The date/time is shown on the display when the \text{DISP} key is pressed several times.

Setting the Date/Time
1. Hold down the \text{MENU} key for 3 seconds to enter Setting mode.
2. Press the \text{\textless\textgreater\textless\textgreater} key to show \text{Clock} and then press the \text{\textless\textgreater\textless\textgreater\textless\textgreater} key.
   \text{Set=Clock}
3. Set the date and time and press the \text{\textless\textgreater\textless\textgreater\textless\textgreater} key.
   \text{04/01/17 10:39:47}

Example: Changing from January to May in the figure below
Press the \text{\textless\textgreater\textless\textgreater} key three times to move the cursor to the month position. Next, press the \text{\textless\textgreater\textless\textgreater} key four times to change the value from 1 to 5.

Before change                             After change
\text{04/01/17 10:39:47}                    \text{04/05/17 10:39:47}

4. When the \text{Setting complete} screen appears, press the \text{ESC/?} key.
5. Hold down the \text{MENU} key for 3 seconds to return to Operation mode.

Explanation
The date format can be changed by date format type of basic setting mode.

* When the \text{\textless\textgreater\textless\textgreater} key or \text{\textless\textgreater} key is pressed while holding down the \text{SHIFT} key, the operation is reversed as when the respective key is pressed by itself.
Setting the Input Range and Alarm on Measurement Channels

Setting the Input Range

Setup Example (1) of Thermocouple Input
Set channel 02 to thermocouple type K and measure temperatures in the range –50.0 to 450.0°C. The measurable range for thermocouple type K is –200.0 to 1370.0°C. The measured values in the range of –50.0 to 450.0°C are recorded in a width of 100 mm on the chart paper. This recording range is called a recording span, and the leftmost and rightmost values of the recording span are called span left and span right, respectively.

-200.0°C      Measurable range of thermocouple type K      1370.0°C

Entering Setting Mode
1. Hold down the [MENU] key for 3 seconds to enter Setting mode.

Selecting the Channel
2. Press the [ ] key with Range shown on the screen.

3. Press the [▲▼] key to set the first channel to 02 and then press the [▼] key.

4. Likewise, set the last channel to 02 and then press the [▼] key.

Selecting the Input Type
5. Press the [▲▼] key to select TC and then press the [▼] key (see “Explanation”).

6. Press the [▲▼] key to select K and then press the [▼] key.

Setting Span Left
7. Set Span_L to –50.0 and press the [▼] key.

* When the [◄►] key or [▲▼] key is pressed while holding down the [SHIFT] key, the operation is reversed as when the respective key is pressed by itself.
Setting Span Right

8. Likewise, set Span_R to 450.0 and press the \(<\rightarrow\) key.

\[ \text{Span}_R = 450.0 \]
\[ -200.0 / 1370.0 \^\circ \text{C} \]

The Setting complete screen is displayed. When this screen is displayed, the settings entered up to then are applied.

Finishing the Settings

9. When Setting complete screen is displayed, do either of the following:

Press the \(<\rightarrow\) key to set other channels.

To finish setting the input range, press the ESC key.

10. Hold down the Menu key for 3 seconds to return to Operation mode.

Setup Example (2) of 1-5V Input and unit

Set channel 03 to 1 to 5V standard signal input and 0.0 to 500.0% scale. The scaling range is –20000 to 30000.

The measured values in the range of 0.0 to 500.0% are recorded in a width of 100 mm on the chart paper.

![Chart paper diagram]

Entering Setting Mode

1. Hold down the Menu key for 3 seconds to enter Setting mode.

Selecting the Channel

2. Press the \(<\rightarrow\) key with Range shown on the screen.

3. Press the \(\uparrow\downarrow\) key to set the first channel to 03 and then press the \(<\rightarrow\) key.

4. Likewise, set the last channel to 03 and then press the \(<\rightarrow\) key.

* When the \(<\rightarrow\) key or \(\uparrow\downarrow\) key is pressed while holding down the SHIFT key, the operation is reversed as when the respective key is pressed by itself.
Selecting the Input Type

5. Press the ▼△ key to select 1-5V and then press the ◄► key (see “Explanation”).

```
Mode=1-5V
Scales and record
```

Setting Span Left

6. Set Span_L to 1.000 and press the ◄► key.
   Press the ◄► key to select the desired digit.
   Press the ▼△ key to select the value.

```
Span_L= 1.000
0.800/ 1.200V
```

---

Setting Span Right

7. Likewise, set Span_R to 5.000 and press the ◄► key.

```
Span_R= 5.000
4.800/ 5.200V
```

---

Setting Scaling Left

8. Set Scale_L to 0.0 and press the ◄► key.
   Press the ◄► key to select the desired digit.
   Press the ▼△ key to select the value.

```
Scale_L= 0.0
-2000.0/ 3000.0
```

---

Setting Scaling Right

9. Likewise, set Scale_R to 500.0 and press the ◄► key.

```
Scale_R= 500.0
-2000.0/ 3000.0
```

The Setting complete screen is displayed. When this screen is displayed, the settings entered up to then are applied.

Finishing the Settings

10. When Setting complete screen is displayed, press the ESC key.
    The Set=Range screen is displayed.

```
Set=Range
03-03 Channel Setting complete
```

Setting the Unit

11. Press the ▼△ key to select Unit and then press the ◄► key (see “Explanation”).

```
Set=Unit
Engineering unit
```

---

12. Press the ▼△ key to set the first channel to 03 and then press the ◄► key.

```
CH=03-03
First channel Last channel
```

---

13. Likewise, set the last channel to 03 and then press the ◄► key.

Selecting the Unit

14. Use the CHARACTER key and ▼△ key to set unit character and then press the ◄► key (see “Explanation”).

```
Unit: CHR:%-
```

* When the ◄► key, ▼△ key, or CHARACTER key is pressed while holding down the SHIFT key, the operation is reversed as when the respective key is pressed by itself.
Finishing the Unit Setting

15. When Setting complete screen is displayed, press the ESC key.

16. Hold down the MENU key for 3 seconds to return to Operation mode.

Explanation

Note

If the range is changed after setting the alarm, the alarm setting becomes invalid. When you change the range, check the alarm setting.

In step 5 of setup examples (1) and (2), you can select an input type or a computation type on the table below.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>

Characters That Can Be Used for Units

A unit is set using up to six characters.

The available characters are as follows:

- Alphabet, numbers, symbols (%, #, @, +, -, *, /, (, ), µ, Ω, ^, ^, ^), and space
Setting the Input Range and Alarm on Measurement Channels

**Setting the Alarm**

**Setup Example**
Set a high limit alarm at 400.0°C on channel 02. The relay output (option) is not available.

**Entering Setting Mode**

1. Hold down the **MENU** key for 3 seconds to enter Setting mode.

**Selecting the Channel**

2. Press the **key with Alarm shown on the screen.**
   
   ![Display](Set=Alarm)
   
   Displays a description of the setup item.

3. Press the **key to set the first channel to 02 and then press the **key.**

   ![Display](CH=01-01)
   
   Displays the selectable range of channels.

4. Likewise, set the last channel to 02 and then press the **key.

**Setting the Alarm Condition**

5. Press the **key to select 1 and then press the **key.**

   ![Display](Level=1)
   
   Displays the selectable range.

6. Press the **key to select On and then press the **key.**

   ![Display](Alarm=On)
   
   Displays possible choices.

7. Press the **key to select H and then press the **key.**

   ![Display](Type=H)
   
   Displays a description of the selected type.

8. Set the alarm value to 400.0 by carrying out the key operations below.

   ![Display](Value=1.000)
   
   Displays the measurable range of the input range specified on the channel.

**Setting the Relay Output**

9. Since the relay output is not used, press the **key with Off selected.

   ![Display](Relay=Off)
   
   Displays possible choices.

The **Setting complete** screen is displayed. When this screen is displayed, the settings entered up to then are applied.

*When the **key or **key is pressed while holding down the **SHIFT** key, the operation is reversed as when the respective key is pressed by itself.
Finishing the Settings

10. When Setting complete screen is displayed, do either of the following:
    Press the $\leftarrow$ key to set other alarms.
    To finish setting the alarm, press the ESC key.

    02-02 CH/level 1
    Setting complete

11. Hold down the MENU key for 3 seconds to return to Operation mode.

Explanation

In step 7, you can select an alarm type on the table below.

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>H</td>
<td>High Limit Alarm: An alarm occurs when the input value exceeds the alarm value.</td>
</tr>
<tr>
<td>L</td>
<td>Low Limit Alarm: An alarm occurs when the input value falls below the alarm value.</td>
</tr>
<tr>
<td>h</td>
<td>Difference High Limit Alarm*: An alarm occurs when the difference in the input values of two channels is greater than or equal to the specified value.</td>
</tr>
<tr>
<td>l</td>
<td>Difference Low Limit Alarm*: An alarm occurs when the difference in the input values of two channels is less than or equal to the specified value.</td>
</tr>
<tr>
<td>R</td>
<td>High Limit on Rate-of-Change Alarm**: The rate-of-change of the measured value in the rising direction is greater than or equal to the specified value.</td>
</tr>
<tr>
<td>r</td>
<td>Low Limit on Rate-of-Change Alarm**: The rate-of-change of the measured value in the falling direction is greater than or equal to the specified value.</td>
</tr>
<tr>
<td>T</td>
<td>Delay High Limit Alarm***: An alarm occurs when the measured value remains above the alarm value for a specified time period (alarm delay period).</td>
</tr>
<tr>
<td>t</td>
<td>Delay Low Limit Alarm***: An alarm occurs when the measured value remains below the alarm value for a specified time period (alarm delay period).</td>
</tr>
</tbody>
</table>

* Can be specified on channels set to delta computation.
** Setting change in Basic Setting mode is necessary.
*** You can select T or t when the alarm delay function is enabled in Basic Setting mode.
Recording/Displaying Data

Starting the Recording

Press the RCD key to start recording.
The status display shows the word “RECORD.”

Recording Example (Pen Model)

[Image of chart showing recorded data]

Recording Example (Dot Model)

[Image of chart showing recorded data]

The recording examples may appear differently from the actual recording as a result of functional improvements made on the recorder after this manual was written.

Stopping the Recording

While recording is in progress, press the RCD key to stop recording.
The word “RECORD” on the status display clears.

Feeding the Chart Paper

The chart paper is fed while the FEED key is held down.
Changing the Chart Speed

1. Hold down the **MENU** key for 3 seconds to enter Setting mode.
2. Press the **▼▲** key to show **Chart** and then press the **◄►** key.

   ![Chart speed](image)

   Displays a description of the setup item.

3. Set the chart speed and press the **◄►** key.

   ![Current chart speed](image)

   Displays the range that can be specified.

   (Display example on the dot model)

On the pen model, press the **▼▲** key to select the chart speed.

**Chart speed on the pen model (unit: mm/h)**

<table>
<thead>
<tr>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

On the dot model, enter a vale to set the chart speed. The chart speed can be set in the range of 1 to 1500 mm/h in 1 mm steps. Press the **◄►** key to select the desired digit. Press the **▼▲** key to select the value.

4. When the **Setting complete** screen appears, the new chart speed is applied.

   ![Chart speed](image)

   **Setting complete**

   Press the **ESC** key to change the chart speed again. Hold down the **MENU** key for 3 seconds to return to Operation mode.

Viewing the Recorded Results

Pull the front cover tab of the chart cassette to open the front cover. The recorded chart paper can be pulled out for viewing.

![Recorded chart paper can be pulled out.](image)

![Front cover tab](image)

* When the **◄►** key or **▼▲** key is pressed while holding down the **SHIFT** key, the operation is reversed as when the respective key is pressed by itself.
The printout description figures are for explaining the printout contents. The font is different from the actual printout. The printout positions are also slightly different.

- **Manual Printout**
  Prints the current measured values and alarm statuses of all channels by operating the keys.

- **New Chart Speed Printout**
  When the chart speed is changed, the time tick (dot model), the date/time of change, and the new chart speed are printed. The time ticks are marks that indicate the positions of the date/time on the chart paper. An asterisk (*) shows there are messages that cannot be printed.

- **Periodic Printout**
  Measured values and other items are printed at the preset interval.

  **Printout Contents**
  The date/time, time tick, measured value and channel status for each channel, the channel scale (the leftmost and rightmost values of the span), and the chart speed are printed. On the pen model, if a time tick is not printed at the correct position, a time tick cancel mark (!) is printed. Pen offset compensation mark is printed when the function to compensate the pen offset along the time axis is enabled. For details on the printout contents, see appendix 1 in the *RD100B Recorder User's Manual* on the CD-ROM.

- **Printout Interval**
  The printout interval can be set by specifying the value or set automatically in sync with the chart speed.

### Alarm Printout

Alarm information is printed when an alarm occurs or releases.

\[1H2*10:00\]

- Time of alarm occurrence/release
- Indicates that there are alarms that are not printed because the alarm printout buffer is full.
- Level number
- Alarm type
- Channel No. or tag

- \(\Delta\): Alarm occurrence, \(\triangleright\): Alarm release

Alarms that occur while an alarm printout is in progress are temporarily saved to the buffer memory in a printout-wait condition. Alarms are cleared from the buffer memory when they are printed. A buffer overflow mark is printed when there are alarms that cannot be printed because the buffer is full.

- **Message Printout**
  An arbitrary character string from five character strings set in advance can be printed on the chart paper. Each message can be set using up to 16 characters.
  If message printout is executed while another message is being printed, the most recent message is temporarily stored to the buffer memory in a printout-wait condition. Messages are cleared from the buffer memory when they are printed. A buffer overflow mark is printed when there are messages that cannot be printed because the buffer is full.

- **Recording Start Printout**
  When recording is started, the time tick (dot model), the time, and the chart speed can be printed. By factory default, the recording start printout is disabled. An asterisk (*) shows there are messages that cannot be printed.

- **Channel Printout (Dot Model)**
  Prints the channel No. or tag by the trend recording.
Recording/Displaying Data

Switching the Display Screen

The screen switches each time the [DISP] key is pressed. Screen 01 through 15 are switched in order. Screens that are set to “Skip” are skipped. Below is a display example.

Display Example (1-channel digital + bar graph display)

<table>
<thead>
<tr>
<th>Channel No.</th>
<th>Alarm status</th>
<th>Measured value</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>11, 12, 13, 14, 15</td>
<td></td>
<td>0000</td>
<td>ppm</td>
</tr>
</tbody>
</table>

Bar graph

Alarm point mark

Scale

- **Channel Auto Switching**
  On screens that show the measured values and computed values, the displayed channel is automatically switched in ascending order. The switching interval can be set to 1 s, 2 s, 3 s, 4 s, or 5 s.

- **Switching the Displayed Channel Using Keys**
  If auto switching is not specified, the channel switches each time the [CH UP] key is pressed in ascending order. All channels are displayed in order.

Display Example (Flag Display)

Flag (the number indicates the channel No.)

Display Example (Alarm Status Display)

Symbol indicating an alarm
Measurement channel
Computation channel
Channel on which an alarm is occurring
Channel on which an alarm is not occurring
Channel on which an alarm is not set

Display Example (Date/Time and Chart Speed Display)

The date format can be specified.

Date

Aug. 31, 2005 12:00 PM

Time

11:26:37

Chart speed

mm/h

Display Example (Status Display)

Alarm status
Chart paper is out (/F1 option).
Changing the Displayed Information

Different display types can be registered to screens 01 to 15. As an example, the procedure of assigning 1-channel digital display to screen 02 is explained below.

1. Hold the \text{MENU1} key for 3 seconds to show the data display setup screen.

Selecting the Screen Number

2. Press the \text{key} to select screen number 02 and then press the \text{key}.

   \texttt{Screen No.=02}

   Displays the current display type name.

A sample screen of the display type appears. A section of the display blinks to indicate that this is a data display setup screen.

Selecting the Display Type

3. The display switches each time the \text{key} is pressed. Select the 1-channel digital display and then press the \text{key}.

   \texttt{1 200.0 mV}

4. Press the \text{key} to set the channel switching interval and then press the \text{key}.

   Interval: Sets the channel switching interval. Select the interval from 1 s, 2 s, 3 s, 4 s, 5 s, and manual.

   Auto1s, Auto2s, Auto3s, Auto4s, Auto5s:
   Switches the displayed channel at the specified time interval.

   Manual:
   Switch the displayed channel manually.

   \texttt{Interval=Auto2s}

5. When the Setting complete screen appears, the new setting is applied.

   \texttt{Screen No.02}

   \texttt{Setting complete}

Press the \text{key} to register display types to other screens.

Hold the \text{MENU1} key down for 3 seconds to exit from the data display setup screen.

Display Types

Display types listed below are available besides the types on previous page.

<table>
<thead>
<tr>
<th>1-channel digital display</th>

<td></td>
</tr>
</tbody>
</table>

* When the \text{key} or \text{key} is pressed while holding down the \text{SHIFT} key, the operation is reversed as when the respective key is pressed by itself.
**FUNC Key Operations in Operation Mode**

The operations below can be carried out with the FUNC key in Operation mode. References to the *RD100B Recorder User’s Manual* provided on the CD-ROM are given in parentheses.

- **Alarm ACK** (section 3.12)
  - Alarm output release operation. This is displayed when the settings are changed to use the alarm ACK operation.
  - Starts/stops the computation. This is displayed on models with the computation function (M1 option).
  - Resets the computation.

- **Math** (section 9.1)
  - Executes manual printout (printout of measured values).

- **Print out** (sections 3.7, 3.8)
  - Executes the setting (Setting mode) printout.
  - Executes setting (Basic Setting mode) printout.

- **Message** (section 3.10)
  - Prints message 1.
  - Prints message 2.
  - Prints message 3.
  - Prints message 4.
  - Prints message 5.

- **Buffer clear** (sections 3.9, 3.10)
  - Clears the data waiting to be printed in the alarm printout buffer.
  - Clears the data waiting to be printed in the message printout buffer.

- **Keylock** (section 3.13)
  - This is displayed when the settings are changed to use the key lock function. It is used to activate or release the key lock.

- **Periodic** (section 3.11)
  - Resets the computed value when printing of the report data (average, etc.) is specified in periodic printout and restarts the calculation of the report data from that point.

- **Pen exchange** (section 3.3)
  - Moves the recording pen to a position that is easily accessible for replacement on the pen model.

- **R. exchange** (section 3.4)
  - Moves the printer carriage near the center position when replacing the ribbon cassette on the dot model.

### Printing Measured Values (Manual Printout)

The measured values of all channels are printed.

**Starting the Manual Printout**

1. Press the **FUNC** key.
   - The **FUNC=** screen appears.
2. Press the **▼△** key to select **Print out** and then press the **◄►** key.
   - **Func=Print out**
3. Press the **◄►** key with **ManualStart** shown on the screen.
   - Manual printout starts. The screen returns to the data display screen.

**Note**

- When manual printout is executed, trend recording is suspended. However, the recorder continues the measurement and alarm detection (in the background).
- When manual printout is complete, trend recording resumes.
- If an alarm occurs during the manual printout, the alarm is printed after the recording resumes.

*When the **◄ ►** key or **▼△** key is pressed while holding down the **SHIFT** key, the operation is reversed as when the respective key is pressed by itself.*
Aborting the Manual Printout

1. Press the \textit{FUNC} key.
2. Press the \textit{key to select \textbf{Print out} and then press the \textit{key.}

\begin{center}
\textbf{Print-Manual Stop}
\end{center}

Printing the Recorder Settings

This section explains the procedure for printing the recorder settings. There are two sets of settings that can be printed: List and Setup.

\textbf{List:} Prints the settings of Setting mode (input range for each channel, etc.)

\textbf{Setup:} Prints the settings of Basic Setting mode

\begin{center}
\textbf{Printout example of List on the pen model}
\end{center}

\textbf{Note}

- The printout takes several minutes to tens of minutes to complete.
- When printout is executed, trend recording is suspended. However, the recorder continues the measurement and alarm detection (in the background).
- When printout is complete, trend recording resumes.
- If an alarm occurs during the printout, the alarm is printed after the recording resumes.

Starting the List Printout

1. Press the \textit{FUNC} key.
2. Press the \textit{key to select \textbf{Print out} and then press the \textit{key.}

\begin{center}
\textbf{Func=Print out}
\end{center}

3. Press the \textit{key to show \textbf{List Start} and then press the \textit{key.}

The List printout starts. The screen returns to the data display screen.

\begin{center}
\textbf{Print=List Start}
\end{center}

Aborting the List Printout

1. Press the \textit{FUNC} key.
2. Press the \textit{key to select \textbf{Print out} and then press the \textit{key.}
3. Press the \textit{key to show \textbf{List Stop} and then press the \textit{key.}

The List printout stops. The screen returns to the data display screen.

\begin{center}
\textbf{Print=List Stop}
\end{center}

Starting/Stopping the Setup Printout

Setup printout can be started/stopped in a similar fashion to List printout. For Setup printout, select \textbf{Setup Start} and \textbf{Setup Stop}.

* When the \textit{\textit{key or \textit{key is pressed while holding down the \textit{SHIFT} key, the operation is reversed as when the respective key is pressed by itself.
Clearing the Alarm Printout Buffer

Alarm information waiting to be printed is temporarily stored in the buffer memory. This operation clears all of the alarm information in the buffer. This function can be used to prevent unneeded alarm printouts from being executed.

1. Press the \textbf{FUNC} key.
2. Press the $\nabla \Delta$ key to select \textbf{Buffer clear} and then press the $\leftarrow \rightarrow$ key.

$\text{Func=Buffer clear}$

3. Press the $\leftarrow \rightarrow$ key with \textbf{Alarm} shown on the screen.
The data in the alarm printout buffer is cleared. The screen returns to the data display screen.

$\text{Buf.clear=Alarm}$

Printing a Message

This section explains the procedure for printing the preset character strings. For details on setting the character strings, see section 6.8, “Setting the Message String” in the \textit{RD100B Recorder User’s Manual} on the CD-ROM.

\textbf{Note}

- Messages can be printed only during trend recording. However, regardless of whether trend recording is in progress or not, messages waiting to be printed are temporarily stored in the buffer memory.
- Message printouts are not performed when the chart speed is greater than or equal to 1600 mm/h and 101 mm/h on the pen model and dot model, respectively.

Printing a Message

1. Press the $\textbf{FUNC}$ key.
2. Press the $\nabla \Delta$ key to select \textbf{Message} and then press the $\leftarrow \rightarrow$ key.

$\text{Func=Message}$

3. Press the $\nabla \Delta$ key to select the message number and then press the $\leftarrow \rightarrow$ key.
The message printout starts. The screen returns to the data display screen.

$\text{Message=Message1}$ $\rightarrow$ Displays the preset message.

Clearing the Message Printout Buffer

Messages waiting to be printed are temporarily stored in the buffer memory. This operation clears the messages in the buffer.

1. Press the $\textbf{FUNC}$ key.
2. Press the $\nabla \Delta$ key to select \textbf{Buffer clear} and then press the $\leftarrow \rightarrow$ key.
3. Press the $\nabla \Delta$ key to select \textbf{Message} and then press the $\leftarrow \rightarrow$ key.
The data in the message printout buffer is cleared. The screen returns to the data display screen.

$\text{Buf.clear=Message}$

* When the $\leftarrow \rightarrow$ key or $\nabla \Delta$ key is pressed while holding down the \textbf{SHIFT} key, the operation is reversed as when the respective key is pressed by itself.
Releasing the Alarm Output (Alarm ACK Operation)

This operation releases the alarm indication or relay output (/A1, /A2, or /A3 option) when the alarm indication or output relay is set to hold operation. For details on the hold operation, see section 1.3, “Alarms” in the RD100B Recorder User’s Manual on the CD-ROM.

1. Press the \[\text{FUNC}\] key.
2. Press the \([\downarrow\uparrow]\) key with Alarm ACK shown on the screen.
   The alarm indication or relay output is released. The screen returns to the data display screen.

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

Activating/Releasing the Key Lock

When the recorder is configured to use the key lock function, this operation activates or releases the key lock. For details on setting the key lock function, see section 7.10, “Setting the Key Lock Function” in the RD100B Recorder User’s Manual on the CD-ROM.

Activating the Key Lock

1. Press the \[\text{FUNC}\] key.
2. Press the \([\downarrow\uparrow]\) key to select Keylock and then press the \([\downarrow\uparrow]\) key.
   The key lock is activated. The screen returns to the data display screen.

Releasing the Key Lock

Note
A password is required to release the key lock.

1. Press the \[\text{FUNC}\] key.
2. Press the \([\downarrow\uparrow]\) key to select Keylock and then press the \([\downarrow\uparrow]\) key.
3. Enter the password for releasing the key lock. The password values are shown with asterisks.
   Press the \([\downarrow\uparrow]\) key to select the desired digit.
   Press the \([\downarrow\uparrow]\) key to select the value.
   \[
   \text{Password=} \quad |
   \]
4. Press the \([\downarrow\uparrow]\) key.
   The key lock is released. The screen returns to the data display screen.

* When the \([\downarrow\uparrow]\) key or \([\downarrow\uparrow]\) key is pressed while holding down the \[\text{SHIFT}\] key, the operation is reversed as when the respective key is pressed by itself.
### Setup Items and Default Values

#### Setup Items in Setting Mode and Their Default Values

The items with an asterisk are not displayed in the default condition. To display these items, settings must be changed in Basic Setting mode.

</table>
To preserve the reliability of the recorder and to use the recorder in good condition for an extended time, it is recommended that periodic replacements be made on parts.

The table below shows the recommended replacement period for expendable parts. The replacement period shown here applies when the recorder is used under standard operating conditions. For the actual replacement period, consider the actual conditions of use. Replacement of parts other than the chart paper, pen, ribbon cassette, and internal light LED will be carried out by a OMEGA engineer or an engineer certified by OMEGA. Contact OMEGA when such replacement is necessary.

### Note

The replacement period of the display and the internal light LED is the half life of the brightness. The deterioration of brightness varies depending on the condition of use, and its determination is subjective. Consider these facts for determining the actual replacement period.

* The half life of the brightness at the factory default brightness setting.
OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of 13 months from date of purchase. OMEGA's WARRANTY adds an additional one (1) month grace period to the normal one (1) year product warranty to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components in which wear is not warranted, include but are not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by the company will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a “Basic Component” under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA’S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR WARRANTY RETURNS, please have the following information available BEFORE contacting OMEGA:
1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.

TEMPERATURE
- Thermocouple, RTD & Thermistor Probes, Connectors, Panels & Assemblies
- Wire: Thermocouple, RTD & Thermistor
- Calibrators & Ice Point References
- Recorders, Controllers & Process Monitors
- Infrared Pyrometers

PRESSURE, STRAIN AND FORCE
- Transducers & Strain Gages
- Load Cells & Pressure Gages
- Displacement Transducers
- Instrumentation & Accessories

FLOW/LEVEL
- Rotameters, Gas Mass Flowmeters & Flow Computers
- Air Velocity Indicators
- Turbine/Paddlewheel Systems
- Totalizers & Batch Controllers

pH/CONDUCTIVITY
- pH Electrodes, Testers & Accessories
- Benchtop / Laboratory Meters
- Controllers, Calibrators, Simulators & Pumps
- Industrial pH & Conductivity Equipment

DATA ACQUISITION
- Data Acquisition & Engineering Software
- Communications-Based Acquisition Systems
- Plug-in Cards for Apple, IBM & Compatibles
- Datalogging Systems
- Recorders, Printers & Plotters

HEATERS
- Heating Cable
- Cartridge & Strip Heaters
- Immersion & Band Heaters
- Flexible Heaters
- Laboratory Heaters

ENVIRONMENTAL MONITORING AND CONTROL
- Metering & Control Instrumentation
- Refractometers
- Pumps & Tubing
- Air, Soil & Water Monitors
- Industrial Water & Wastewater Treatment
- pH, Conductivity & Dissolved Oxygen Instruments
