[Logo: OMEGA]
Introduction

Thank you for your purchasing of this handy logger model OM-2041/Data read software. To safely operate this product, always thoroughly read this instruction manual to fully understand the proper operating procedures and safety precautions before starting operation. After this manual has been read, carefully store it in a safe place.

Check items before starting operation

When unpacking this product, carefully check the package contents. If any package contents are missing, contact your local sales representative or sales office.

About this instruction manual

- No parts of this instruction manual are reproduced or transmitted in any form or by any means without the written permission.
- The contents of this manual are subject to change without prior notice.
- Figures and illustrations stated in this manual may be emphasized, simplified, or omitted to describe the contents.
- If any unclear point, incorrect description, or missing description is found in the contents of this manual, contact your nearest sales representative or contact our sales office.
- Company and product names used in this manual are the trademarks or registered trademarks of their respective owners.

Indemnities

- OMEGA Engineering, Inc. shall not be held responsible for any defects beyond the specified guarantee terms of this product.
- OMEGA Engineering, Inc. shall not be held responsible for any direct, indirect or consequential damages, losses, or expenses of the customer or third party resulting from use of this product.

System requirements

Applicable PC model: IBM PC/AT and its compatibles
OS: System environment where Windows98, Me, 2000, or XP runs correctly.
Communication port: One RS-232C compatible communication port (COM) or One USB 1.1/2.0 compatible port.
Hard disk drive: At least 10MB is required to install this software.
Free memory capacity: At least 64MB (128MB or more of memory recommended)
CPU: Pentium MMX 200MHz or higher
Printer: Printer running correctly on the OS listed above.
Printer driver: Printer driver allowing of correct operation of the printer on the OS listed above.

- “IBM” is the trademark or registered trademark of International Business Machines Corporation in the United States.
- “Microsoft” and “Windows” are the trademarks or registered trademarks of Microsoft Corporation in the United States.
- “Intel” and “Pentium” are the trademarks or registered trademarks of Intel Corporation in the United States.
### Safety Precautions

- Cautions stated in this manual indicate important contents about operational safety. Therefore, carefully read the contents and strictly follow the instructions.
- In this instruction manual, the following warning labels are provided to indicate possible hazards and ensure operational safety.

<table>
<thead>
<tr>
<th>WARNING</th>
<th>This denotes hazards which COULD result in death or severe personal injury, if not avoided.</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAUTION</td>
<td>This denotes hazards which COULD result in minor personal injury and/or product or property damage, if not avoided.</td>

#### [Safety precautions]

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Do not connect the communication cable by wet hand. Doing so may cause an electrical shock.</td>
</tr>
<tr>
<td>- Do not connect the communication cable with the logger main unit and/or communication cable getting damp. Doing so may cause an electrical shock or a fire to occur due to short-circuit.</td>
</tr>
<tr>
<td>- After the communication cable has been connected, pay special attention so that any water does not splash onto the logger main unit or communication cable. Failure to do so may cause an electrical shock or a fire to occur due to short-circuit.</td>
</tr>
<tr>
<td>- Do not use the communication cable for purpose other than that specified.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Do not expose the communication cable and/or CD-ROM to the direct sunlight or put them in a place where the temperature is high. Additionally, do not leave the communication cable and/or CD-ROM in a place where the high temperature continues for an extended period of time, such as inside of a car. Doing so may cause the communication cable and/or CD-ROM to be discolored or deformed.</td>
</tr>
</tbody>
</table>

- Even though this product is used together with other units, always strictly follow the safety precautions stated in this manual. OMEGA shall not be held responsible for any defect arising from negligence of such cautions and instructions.

### Handling Precautions

- When storing the CD-ROM, do not store it in a place where it is exposed to the direct sunlight, or any dirt, dust, or fluid, such as water is not sticking to it.
- Always carefully handle the CD-ROM. If the data recorded surface or label surface is scratched, this may cause the data not to be read.
- Always carefully handle the communication cable so that any excessive load is not applied to it. When connecting or disconnecting the cable, always hold the connector firmly and connect or disconnect it straight. Failure to do so may cause the cable or logger main unit to break.
- Do not wet the communication cable with water or other fluid. If the communication cable gets damp, dry it completely before use.
- After the communication cable has been connected, pay special attention so that any water does not splash onto the logger main unit or communication cable since the water-proof performance of the logger main unit cannot be kept with the communication cable connected.
- Do not operate the system close to a unit producing the strong static electricity or electromagnetic wave, such as television set or microwave oven. Doing so may cause a malfunction or fault.
Installing the Software

The following describes how to install the software.

1. **Power ON the personal computer to start up Windows.**

   **CAUTION**
   If other applications are running when installing this software, such application may adversely affect the installation of the software. To avoid such troubles, exit all currently running applications completely before starting the installation.

2. **Set the software CD-ROM supplied with this data read software package in the CD drive.**

   The setup program will start running automatically.

   ![Setup Wizard](image)

   **CAUTION**
   If the installation of the software is not started up even though the CD-ROM is set, double-click the [setup.exe] file contained in the CD-ROM to start installing the software.

   ![Installation Options](image)

   **CAUTION**
   If the Windows installer is not installed on your computer, the following window will appear.

   Follow the instructions that appear in the window and click the [Yes] button. The system will be restarted, but the installation will be continued subsequently.
3. “Select Installation Folder”

The following window will appear.

Specify a folder where you wish to install the software. The default folder is “C:\Program Files\Handy Logger DATA READER\”. Normally, the software is installed into this folder.

If you accept this default folder, click [Next] to proceed the installation.

**CAUTION**
The drive No. (such as “C:\”) that appears in the window may vary depending on the system configuration of the personal computer you are using. When reading the message shown in the above window, change the drive No. to that corresponding to your personal computer environment.

4. “Confirm Installation”

The following confirmation window will appear. Clicking the [Next] button will start installing the software.

**CAUTION**
If other applications are running when installing this software, such application may adversely affect the installation of the software. To avoid such troubles, exit all currently running applications completely before starting the installation.
5. “Installing Handy Logger DATA READER”
   The software installation will be started.

After the software has been installed completely, the following window will appear. After checking the message shown in the window, click the [Close] button to exit the software installation.
Uninstalling (Deleting) the Software

The following describes how to uninstall (delete) the handy logger data read software from your personal computer.

1. From the [Start] menu, select [Settings] and [Control Panel] in that order.

2. Double-click [Add/Remove Programs].

3. Select [Handy Logger DATA READER] and click the [Add/Remove] button.
4. Check on [Remove Handy Logger DATA READER] and click the [Finish] button.

After the software has been uninstalled successfully, the following dialog box will appear. Click the [Close] button to exit the software uninstallation.
## Connecting to the Logger (USB)

When this unit is connected to your PC (personal computer) with the special USB cable, the recorded data can be read and saved into a file on the PC. The setting of recording can be written from the PC too. Also, the special USB cable (supplied with the charged software) is naturally required to communicate the data with the PC.

1 **Connecting the special cable to the logger**

[On the side of PC] Connect the A connector of the USB cable to the USB port.

**CAUTION**
- Hold the plug of the cable and pull it out when disconnecting the cable connector.
- If the lead cable is pulled to disconnect the connector, the cable may malfunction.

[On the side of the unit] Connect the mini B connector of the USB cable to the communication port.

Open the cover of the communication port with the “PC” marking and insert the plug of the USB cable firmly into the communication port until it is in contact with the far side. Also, use the special cable supplied with the charged software.

**CAUTION**
- Hold the plug and pull it out when disconnecting the cable connector.
  
If the lead cable is pulled to disconnect the connector, the cable may malfunction.
- Use the special cable (supplied with the software) only.
- Close the cover firmly if the port is not used.
  
Otherwise, the drip-proof performance may be damaged.
### Installing USB driver

This paragraph describes the installation of the driver software for MR2041 on your OS. For the installation of this driver software on your personal computer with plural USB ports, we recommend to choose one USB port only for using this unit and then install this software.

* When you change the USB port, the installation of this software for a new USB port may be necessary.

---

**Installation in Windows2000 or WindowsXP** *(For Windows98 and WindowsME, refer to Page 10.)*

1. **Power on your personal computer and start Windows. (Don’t connect the logger at this moment.)**
   
   Caution: For Windows XP/2000, log on as a user belonging to Administrators group.

2. **After Windows starts, insert the CD-ROM.**

3. **Connect the logger to a USB port. The below screen will appear.**

   After several seconds, the right screen will appear. Select the [Install the Software Automatically.] and click the [Next] button.

   ![Logger Connection](image)

   
   ![Wizard Installation](image)

   The above screen may appear when you connect the logger to other USB port. In this case, install the software with the same procedure.

   The above screen will not appear when you re-connect the logger to the USB which you connected this unit once and completed the installation successfully.

   If the above screen does not appear on condition that the installation is not completed, the following cause is considered.

   **Cause:** The logger is not correctly connected to the USB port.
   
   → Confirm that the logger is correctly connected to the USB port again.
   
   → Change the USB port to other port for the connection with the logger and try again.

4. **The below screen will appear. By clicking the [Next] button, the right screen will appear and the wizard will start to install the software.**

   ![Wizard Searching](image)

   ![Wizard Installing](image)
When below screen will appears, click the [Continue Anyway] button.
The wizard will be continued to the following step.

The below screen will appear. By clicking the [Finish] button, the right screen will appear and the next hardware will be searched.

The Found New Hardware Wizard will appear. By clicking the [Next] button, the wizard will detect the software and start to install it.

When below screen will appears, click the [Continue Anyway] button.
The wizard will be continued to the following step.
The below screen will appear when the installation is complete. By clicking the [Finish] button, the right screen will appear and the logger becomes ready-to-use.

Verification of connections after the installation of the driver (Windows2000, WindowsXP)

The following procedure is for your verification that the driver has been installed correctly and the logger has been recognized.

*Please keep the logger connected to the USB port of your PC.

1. Right-click the [My Computer] and click the [Property (R)]. If the [My Computer] is not available, click the [Start] button and then right-click the [My Computer].

2. Click the [Hardware] tab and then click the [Device Manager (D)] button.

3. Double-click the “USB (Universal Serial Bus) Controller” in the Device Manager screen and verify that the below title is listed.

   MR2041 USB Composite Device

4. Double-click the “Port (COM and LPT)” in the Device Manager screen and verify that the below title is listed.

   CHINO USB to UART Bridge Controller (COMx)

   * The COM port number differs depending on your PC.

After your verification, close the screen.

Notes

The logger is assigned to a COM port number in ascending order from the COM port 3 in currently unused COM ports of your PC.

(The COM port number differs depending on your PC.)

- When an OS is installed into your PC, remove the logger from it.
- The logger does not correspond to Standby, Suspend or Sleep condition of your PC.
- Plural sets of the logger can not be used simultaneously.
Installation in Windows98 or WindowsMe

1. Power on your personal computer and start Windows. (Don’t connect the logger at this moment.)
   * Wait until the desktop screen appears.

2. After Windows starts, insert the CD-ROM.
   The installation of application will start but cancel it.

3. Connect the logger to a USB port. The below screen will appear.

After several seconds, Windows will recognize the logger and the Add New Hardware Wizard will appear. The right screen will appear. Select the radio button of “Specify the location of the driver (advanced)” and then click the [Next] button.

4. The right prompt screen will appear. Select the radio button of “Search for the best driver for your device. (Recommended)” and place a check mark in the “Specify a location:” box. Click the [Browse…] button.

5. At the right screen, select the drive that the CD-ROM is inserted and then click its [+] button to display the “Drivers”. Highlight the “Drivers” and click the [OK] button. The screen will return to the screen of 4. Click the [Next] button.
6. The right screen will appear. Click the [Next] button.

7. The right screen will appear. The installation of one driver in your PC is completed. Click the [Finish] button.

8. After several seconds, the right screen will appear for the installation of another driver. Select the radio button of “Search for the best driver for your device. (Recommended)” and then click the [Next] button.

9. At the right screen, place a check mark in the “Specify a location:” box. Verify the box indicates “F:\Drivers” that CD-ROM is inserted and then click the [Next] button. If a different location is indicated, refer to 5.
The right screen will appear. Verify the location of driver is the driver that the CD-ROM inserted and then click the [Next] button.

The right screen will appear. The installation of another driver in your PC is completed. Click the [Finish] button.

**Verification of connections after the installation of the driver (Windows98, WindowsME)**

The following procedure is for your verification that the driver has been installed correctly and the logger has been recognized.

*Please keep this unit connected to the USB port of your PC.*

1. Right-click on the [My Computer] icon and select the [Property (R)].

2. The right window will appear. Click the [Device Manager (D)] tab.

3. Double-click the “USB (Universal Serial Bus) Controller” in the Device Manager screen and verify that the below title is listed.

   MR2041 USB Composite Device

4. Double-click the “Port (COM and LPT)” in the Device Manager screen and verify that the below title is listed.

   CHINO USB to UART Bridge Controller (COMx)

   * The COM port number differs depending on your PC.

   After your verification, close the screen.
Connecting to the Logger (RS-232C)

To connect your personal computer to the logger for data communication, use the communication cable supplied with the software.

[Personal computer side] Connect the DSUB 9-pin connector of the communication cable to the COM port on the personal computer (see the Fig. below).

**CAUTION**

- Before connecting the communication cable, always power OFF the personal computer completely.
- When disconnecting the cable, hold the plug firmly and pull it out. At this time, do not pull the cable.

[Logger side] Connect the mini jack of the communication cable to the communication port on the logger (see the Fig. below).

Open the cover of the communication port with the “PC” marking put and insert the mini jack firmly until it is in contact with the far side.

**CAUTION**

- When disconnecting the communication cable, hold the plug firmly and pull it out. At this time, do not pull the cable.
- To connect the personal computer and logger, always use the communication cable supplied with the data read software. Do not use any cable other than that specified.
- The drip-proof performance cannot be kept when the communication cable is connected.
- If the communication cable is not used, close the cover on the port firmly. Failure to do so may cause the drip-proof performance to lower.
Starting up the Software

The following describes how to start up the software.

[Starting up procedure 1] Double-click the icon on the desktop.

[Starting up procedure 2] From the [Start] menu, select [Programs], [Handy Logger], and [Handy Logger DATA READER] in that order.

The application will then be started up.
Making the Initial Settings of the Software

After this software has been installed successfully, first make the [Comm.Port] setting. With this [Comm.Port] menu, specify a communication port that the personal computer uses.

1. Connect the logger and personal computer with the cable.

Connect the logger and personal computer while referring to the section “Connecting to the logger.” Additionally, put the logger in the communication mode that the data communication can be started.

[Preparations for logger]

① Connect the logger and personal computer correctly with the communication cable.
② Power ON the logger and put it in the communication mode.

To put the logger in the communication mode, follow the steps below.

- Display the home screen.
- Press [FUNC] key to display the main menu.
- Using the [▲] or [▼] key, select [Communication] and press the [ENT] key.

The communication standby screen will appear on the display panel of the logger, and then the logger becomes ready for data communication.

2. Start up this software.

3. From the [Comm. Port] menu, select [Auto select].

4. Check the cable connection and click the [OK] button.

After that, the software will automatically search for the communication port, to which the logger is connected. When the software searches for the communication port successfully, the following dialog box will appear. (The following dialog box shows that the logger is connected to “COM1”.)
**CAUTION**

Once the communication port has been set, this setting is then saved into the personal computer. Therefore, it is not necessary to set the communication port from the next operation.

However, it is absolutely necessary to set the communication port if any of the following arises.

- This software is uninstalled, and then it is installed again.
- The communication port, to which the cable is connected, is changed.
- As the system configuration of the personal computer is changed, the communication port setting is changed.

If the connection is failed even though the cable is connected properly and the communication mode of the logger functions correctly, set the communication port again.

![Handy logger DATA READER](image)

If the auto select is failed:

![Result - failure!](image)

If the above dialog box appears during auto select of the communication port setting and the communication port cannot be found, select [Manual Select] from the [Comm. Port] menu.

![Manual Select](image)
Software Functions and Displays

The following describes the basic functions and displays of the application software.
For details about functions, displays, and operations, run [Help] of the application.

**Toolbar**

- **Connect**
  - Connects the logger and personal computer to make them ready for communication.

- **Import....**
  - Loads the recorded data from the logger to the personal computer.

- **Settings...**
  - Makes the recording settings (log setting/tag setting) and saves them into the logger.

- **Personnel List**
  - Registers work personnel and saves them into the logger.

- **Comment List**
  - Registers comments and saves them into the logger.

- **Clock/Name**
  - Changes the logger settings and saves them.

- **Open...**
  - Loads a saved file and displays it on the screen.

- **Save As...**
  - Saves the selected display data with a file name put.

- **Print...**
  - Prints the selected display data in the table format.

- **Graph**
  - Displays and prints the graph of the selected display data.

**Status bar**

- **[Connect/Disconnect]**
  - Displays the logger connection status.

- **[Model]**
  - Displays the model name of the connected logger.

- **[Inst.Name]**
  - Displays the instrument name of the connected logger.

- **[Mode]**
  - Displays the current operation mode (log mode/tag mode).
On the title bar, “LOG□□” (01 to 20) is shown when the data read from the logger is displayed. File location (path) is shown when the data read from the file stored in the PC is displayed.

[Set values]
- **Name**: 8-digit numeric value automatically allocated during recording. (For example, “05231456” means “14:56 on May 23”.)
- **Interval**: Data recording interval
- **Start**: Data recording start date and time
- **Stop**: Final data recording date and time
- **Personnel**: Work personnel recorded during data recording
- **Comment**: Comment recorded during data recording

[Recorded values]
- **Mk.**: Mark put during data recording
- **No.**: Data No.
- **Date/Time**: Date and time when the data was recorded.
- **CH1-CH4**: Measured value of each channel

[Calculation values]
- **Max.**: Maximum value of each channel
- **Min.**: Minimum value of each channel
- **Average**: Average value of each channel
- **Accum.**: Accumulation value of each channel
On the title bar, “TAG□□” (01 to 20) is shown when the data read from the logger is displayed. File location (path) is shown when the data read from the file is displayed.

[Set values]
- Name: TAG01 to TAG20 (Tag name cannot be changed.)

[Recorded values]
- No.: Data No.
- Date/Time: Date and time when the data was recorded.
- CH1-CH4: Measured value of each channel
- Personnel: Work personnel recorded during data recording
- Comment: Comment recorded during data recording

[Calculation values]
- Max.: Maximum value of each channel
- Min.: Minimum value of each channel
- Average: Average value of each channel
Graph display (Log mode only)

Toolbar

1. Range  Changes the graph range (X-axis and Y-axis).
2. Graph Print  Prints the displayed graph.
3. Label  Displays the data label (recorded date and time, and recorded values).
4. Line  Changes the line width of the graph (thin/thick).

Data table

Toolbar

① Range  Changes the graph range (X-axis and Y-axis).
② Graph Print  Prints the displayed graph.
③ Label  Displays the data label (recorded date and time, and recorded values).
④ Line  Changes the line width of the graph (thin/thick).

Data table

CH  Displays the channel No. and unit.
Data  Displays the number of data in the graph display area.
OR/UR  Displays the number of over/under range data in the graph display area.
Interval  Displays the data recording interval.
Max.  Displays the maximum value in the graph display area.
Min.  Displays the minimum value in the graph display area.
Average  Displays the average value in the graph display area.
Remark  Allows inputting of a comment for each channel.
## Function Flow

### Handy Logger DATA READER

#### Logger (L)
- Connect (C)
  - Makes the logger and personal computer ready for communication.
- Import (I)
  - Saved data of the logger is selected, and then it is loaded.
- Logger Settings (L)
  - Makes the logger recording setting and reservation setting, and then saves them.
  - Makes the list of work personnel and saves it into the logger.
  - Makes the list of comments and saves it into the logger.
  - Changes the logger unit setting and saves it.
  - Changes the existing recording setting of the logger and saves it.
- Clock/Name (M)
- Default Settings (D)

#### File (F)
- Open (O)
  - Loads a file.
- Close (C)
  - Closes the selected data display screen.
- All Close (E)
  - Closes all data display screens.
- Save As (A)
  - Saves the selected data into a file.
- Print (P)
  - Prints the selected data in the table format.
- Exit (X)
  - Exits the software.

#### Comm. Port (C)
- Auto Select (A)
  - Selects a communication port automatically.
- Manual Select (M)
  - Selects a communication port manually.

#### Window (W)
- Tile Vertically (V)
  - Tiles the data display screens vertically.
- Tile Horizontally (H)
  - Tiles the data display screens horizontally.
- Cascade (C)
  - Cascades the data display screens.

#### Graph (G)
- Displays or prints the graph of the selected data.

#### Help (H)
- Help (H)
  - Displays the help about this data read software.
- Version Info...
  - Displays the version information about this data read software.
## Troubleshooting
