Compact Pressure Switches
PSW9 series

Where Do I Find Everything I Need for Process Measurement and Control? OMEGA...Of Course!
Shop online at omega.com™

TEMPERATURE
- Thermocouple, RTD & Thermistor Probes, Connectors, Panels & Assemblies
- Wire, Thermocouple, RTD & Thermistor
- Calibrators & Ice Point References
- Recorders, Controllers & Process Monitors
- Infrared Pyrometers

PRESSURE, STRAIN AND FORCE
- Transducers & Strain Gages
- Load Cells & Pressure Gages
- Displacement Transducers
- Instrumentation & Accessories

FLOW/LEVEL
- Rotameters, Gas Mass Flowmeters & Flow Computers
- Flow Indicators
- Turbine/Paddleswheel Systems
- Totalizers & Batch Controllers

pH/CONDUCTIVITY
- pH Electrodes, Testers & Accessories
- Benchtop/Laboratory Meters
- Controllers, Calibrators, Simulators & Pumps
- Industrial pH & Conductivity Equipment

DATA ACQUISITION
- Data Acquisition & Engineering Software
- Communications-Based Acquisition Systems
- Plug-in Cards for Apple, IBM & Compitables
- Datalogging Systems
- Recorders, Printers & Plotters

HEATERS
- Heating Cable
- Cartridge & Strip Heaters
- Immersion & Band Heaters
- Flexible Heaters
- Laboratory Heaters

ENVIRONMENTAL MONITORING AND CONTROL
- Metering & Control Instrumentation
- Refractometers
- Pumps & Tubing
- Air, soil & Water Monitors
- Industrial Water & Wastewater Treatment
- pH, Conductivity & Dissolved Oxygen Instruments

M-5266/0213
OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of 12 months from date of purchase. OMEGA’s WARRANTY adds an additional one (1) month grace period to the normal one (1) year product warranty to cover handling and shipping time. This ensures that OMEGA’s customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA’s Customer Service Department will issue an Authorized Return (AR) Number immediately upon phone or written request. Upon examination by OMEGA, the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA’s WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to: mis-handling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion, dirt, moisture or vibration; improper specification; misuse or other operating conditions outside of OMEGA’s control. Components in which wear is not warranted, include but are not limited to: contact points, fuses, and trims.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by the company will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESSED OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of the parties here described are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the product upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended for use as a “Basic Component” under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any tents be used in or with any nuclear installation or activity, medical applications on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Products in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests and inquiries to the OMEGA Customer Service Department. Before returning any Product(s) to OMEGA, the Purchaser MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA’S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence. OMEGA reserves the right to inspect the Product and determine if the Product is, in fact, defective within the warranty period. The purchaser is responsible for shipping charges, freight, insurance, and proper packaging to prevent breakage in transit.

WARRANTY/DISCLAIMER

The policy of OMEGA Engineering, Inc. is to comply with all worldwide safety and EMC/EMI regulations that apply. OMEGA is constantly pursuing certification of its products to the European New Approach Directives. OMEGA will add the CE mark to every appropriate device upon certification. OMEGA Engineering, Inc. hereby certifies that this equipment is in compliance with the essential requirements and other relevant provisions of Directive 98/37/EC. The following equipment(s) is/are involved in this document: (Type Designation). OMEGA accepts no liability for any errors it contains, and reserves the right to alter specifications without notice.

WARNING: These products are not designed for use in, and should not be used for, human applications.

**Intended Applications**
The pressure switches are specifically applied for monitoring and controlling of operations using maximum and minimum pressures. A limit switch triggers an electrical signal when minimum or maximum pressure is reached.

**DANGER**
The switch may only be used in the specified fields of application (see nameplate).
The temperature has to be within the specified ranges, the pressure values and the electrical rating must not exceed the values specified.
Observe also the applicable national safety instructions for assembly, commissioning and operation of the switch.
The switch is not designed to be used as the only safety relevant element in pressurized systems according to DGR 97/23/EC.

**Safety Instructions**
The safety instructions are intended to protect the user from dangerous situations and/or material damage.
In the operating instructions the seriousness of the potential risk is designated by the following signal words:

**DANGER**
Refers to imminent danger to humans.
Non-observance may result in fatal injuries.

**WARNING**
Refers to a recognizable danger.
Non-observance may result in fatal injuries, and destroy the equipment or plant parts.

**CAUTION**
Refers to a danger.
Non-observance may result in light injuries and material damage to the equipment and/or to the plant.

**IMPORTANT**

Refers to important information essential to the user.

**Disposal**

The equipment must be disposed correctly in accordance with the local regulations for electric/electronic equipment.

The equipment must not be disposed of with the household trash.

**Standards**

The standards applied during development, manufacture and configuration are listed in the CE conformity and manufacturer's declaration.

**Transport/Storage**

Severe shock and vibrations should be avoided during transport. Storage should be dry and clean.
Installation/Commissioning

DANGER

Only install or uninstall the switch when de-energized (electrically and hydraulically/pneumatically). Pressure connection and electrical connection must be carried out by trained or instructed personnel according to relevant standards. The switch must only be installed in systems where the maximum operation pressure $P_{\text{max}}$ is not exceeded (see the name plate).

WARNING

Pressure peaks and pressure shocks exceeding the maximum operating pressure are inadmissible. The maximum operating pressure is the upper final value of the adjustable range or, if specified, the pressure indicated as maximum operating pressure (see Fig. 8 or the nameplate). Exceeding the max. Operating pressure affects the performance and the life span of the product and may damage it. Pressure switches must be mounted vibrationless.

WARNING

Check the switch regularly to ensure it functions properly. If the switch does not work properly, stop operation immediately!

IMPORTANT

The standard G1/4" female thread can be mounted directly on the pipe connection. The mounting with a screw-wrench (SW30 (width across flats 1.18") (only on the thread block (see Fig. 7). Torque: max. 30 Nm (22 ft-lb)

IMPORTANT

All pressure switches are 100% tested before they leave the factory. Factory proof pressure is stated on the typed nameplate (see Fig.8).

Contact Protection

The micro switches used are normally suitable for both direct and alternating current operation. Inductive, capacitive and lamp loads may, however, considerably reduce the life expectancy of a micro switch and, under extreme circumstances, even damage the contacts. Depending on the application spark suppression and current limiting is recommended (see figures 1 to 4).

<td></td>
<td></td>
</tr>
</tbody>
</table>

Fig. 9: Electrical ratings

IMPORTANT

We recommend using a fuse of the maximum current rating from the table above according to the load switched.

Operating life time

Normal expected service life (expressed in the number of cycles over the full adjustment range) is approximately 1 million for the pressure switch. This may be extended to 2.5 million cycles maximum if only a part of the adjustment range is used (about 20%).

Switch sensor life may also be effected negatively by:
- Media not compatible with the wetted materials.
- Rapid pressure changes in the system, or in case of diaphragm switches >30 cycles/minute, in case of piston switches >60 cycles/minute.
- System cycling pressure exceeding the top of the adjustable range.

The proof pressure may not be exceeded, otherwise the switch may be damaged. Careful selection of the pressure range can have a positive effect on the service life of the switch.

Adjustment Screw
Thread block SW30 (1.18")

Fig. 7: Compact pressure switch PSW9 Series

The thread block can be mounted directly on the pipe connection. Use an open-wrench (SW30 (width across flats 1.18") only on the thread block (see Fig. 7).

The electrical mating connector may include in the delivery if proper option is selected.

Torque on the thread block: max. 30 Nm (22 ft lb(f))

Set point adjustment

---

<table>
<thead>
<tr>
<th>IMPORTANT</th>
</tr>
</thead>
</table>

Factory-Provided: pressure switch point setting
For pressure switches that have been factory set the setting will be printed on the nameplate

Warranty is not applicable for any changes that may occur due to transportation or installation.
For critical applications we recommend the setting is checked and re-set if necessary after installation and wiring of the pressure switch.

In pressure switches, a displacement of the pressure sensing element (piston) occurs with a change in pressure. Following the displacement of the pressure sensing element operates a microswitch.

Upon delivery of the product, the set points are likely to be found in the middle of the adjustable range. On request, factory-set points may be set at our factory. In this event, the set point will be indicated on the nameplate, i = increasing, d = decreasing.
The set point is adjusted by turning the captive adjustment screw (see Fig. 7).

Allow pressure switch to reach the desired switch pressure.

Turn adjustment screw clockwise or counter-clockwise to activate the micro switch

---

**IMPORTANT**

Please consult the wiring diagram for the contact status at atmospheric pressure (see).

---

**Precise adjustment of set point to actuate on increasing pressure**

1. Lower system pressure to 0 psi.
2. Increase pressure slowly and check if micro switch is actuated at desired switch pressure.
3. If necessary, readjust by turning the adjustment screw
4. Repeat preceding steps (1. to 3.) until microswitch operates at desired switch pressure.

**Precise adjustment of set point to actuate on decreasing pressure**

4. Increase pressure up to a point clearly above the desired switch pressure (at least, switch pressure plus max. hysteresis; not above max. operating pressure).
5. Lower pressure slowly and check if micro switch is actuated at desired switch pressure.
6. If necessary, readjust by turning the adjustment screw
7. Repeat preceding steps (4. to 6.) until microswitch operates at desired switch pressure.

**Electrical connections**, dimensions in mm (inch)

**Fig. 6: Pin Call-Outs**

---

**Maintenance/Cleaning**

**Maintenance**

The pressure switch is maintenance free. Checking the set points lies within the discretion of the user. The usual preventive maintenance work in accordance with the PED guidelines must always be carried out.

Please note that small set point drifts may occur during the initial use of the switch (run-in period). Larger or continuing set point drifts during the normal use of the switch may indicate that the measuring system is not used correctly within the specified limits, exceeding the design criteria or is worn-out. This might lead to metal fatigue of the measuring system and it therefore should be replaced before an ultimate rupture of the metal might take place. Please consult OMEGA for guidelines.
