OM–SGD–24–M–IP SERIES
Waterproof Smart Graphics Display
OM-SGD-24-M-IP
Waterproof Smart Graphics Display

FEATURES
• 2.4” color TFT screen
• IP-67 and NEMA 6 rated
• Rugged and scratch resistant Corning® Gorilla® Glass window
• Supplied with free Windows design software, to setup and customize the display. Compatible with Windows XP, Vista 7 and 8
• Download meter applications from the ever expanding online library
• Programmable with the USB interface
• Simple and easy panel mounting solution
• IP-67 12-way connection
• Wide operating voltage of 4V – 30V d.c.
• 0 – 40V d.c. measurement range
• 2 analog inputs & 2 alarm outputs
• SPI and I²C
• 4-20mA version available (OM-SGD-24-M-IP420)

The OM-SGD-24-M-IP is a smart IP-67 graphics display with a 320 x 240 pixel (QVGA) color display and USB programming interface.

Using the PanelPilot software (available for Windows XP, 2000, Vista and Windows 7), users are able to choose from an ever-increasing number of configurations which can then be customized to their needs. The additional voltmeter types and other functions are available through www.omega.com.

Colors, text labels, splash screen and input voltage scaling can all be customized by the user through the software and then uploaded to the OM-SGD-24-M-IP through the USB connection. When setup is complete, the settings can be saved and then uploaded to the meter using the supplied USB cable. Panel or enclosure installation of the finished module is simple, using the 32mm nut and the IP67 connector supplied with the unit.

* Depending on user calibration settings

** The OM-SGD-24-M-IP uses a programmable gain amplifier. There are 8 different voltage ranges, to optimise the resolution. See page 2 for details.

*** Voltage dependent. See graph on Page 2.

**Connector plug options**

- Twist lock, field installable connector with solder bucket pins. Seals for Cable OD=4.5mm~7.0mm
- Twist lock connector with right angle overmoulded strain relief. Cable length 2m.

VOLTAGE INPUT
The OM-SGD-24-M-IP features 2 voltage inputs, which use a Programmable Gain Amplifier (PGA) to make the best use of available resolution (the smallest voltage range offers the highest resolution)*. Each channel can be programmed independently, with the option of eight different input voltage ranges:

<table>
<thead>
<tr>
<th>Voltage Range (V)</th>
<th>Resolution (mV)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 1.25</td>
<td>0.3</td>
</tr>
<tr>
<td>0 - 2.5</td>
<td>0.6</td>
</tr>
<tr>
<td>0 - 4</td>
<td>1.0</td>
</tr>
<tr>
<td>0 - 5</td>
<td>1.2</td>
</tr>
<tr>
<td>0 - 8</td>
<td>2.0</td>
</tr>
<tr>
<td>0 - 10</td>
<td>2.4</td>
</tr>
<tr>
<td>0 - 20</td>
<td>4.9</td>
</tr>
<tr>
<td>0 - 40</td>
<td>9.8</td>
</tr>
</tbody>
</table>

The input voltage range is decided using the two voltages that the user enters in the scaling section of the Panel Pilot software. The software uses the smallest range available, which can accommodate both of the voltages entered by the user. The absolute maximum voltage input is 40V d.c.

For example:
Entering a voltage scale of 0 – 30V in the software will use the 0 – 40V range.
Entering a voltage scale of 0 – 3V in the software will use the 0 – 4V range.
Entering a voltage scale of 5 – 15V in the software will use the 0 – 20V range.

Note: V+, IN1 and IN2 share a common ground (i.e. not floating or isolated from each other).

*For the 4-20mA model, the 0-2.5 range is used.

Typical Supply Current

USB Connection
A 'Type A to Mini-B' USB cable is required to program and customize the OM-SGD-24-M-IP by unscrewing the 4xM3 screws and removing the back cover. The packing tray supplied can be used as a jig to hold the module and to avoid disconnecting the 12 way connector from the PCB inside.

The device will be powered for programming via USB.

It typically takes between 10 and 30 seconds to send a configuration, with an additional 5 seconds needed for the hardware to reset.

Display
The display is a 2.4” TFT panel, with a resolution of 320 x 240 pixels and a 16-bit color depth. Any graphics that are uploaded to the meter are automatically converted to this specification.
OM-SGD-24-M-IP
Waterproof Smart Graphics Display

PANEL MOUNTING
The OM-SGD-24-M-IP can be fitted into panels of up to 10.5mm deep. A rubber seal is included to seal the mounting hole when the 32mm nut is fully tightened. Panel mounting hole cut-out is DIA 33mm.

DIMENSIONS
All dimensions in mm [inches]

### VARIOUS OPERATING MODES

**MEASURING A VOLTAGE SOURCE**

![Diagram](image1)

**MEASURING 0-2 AMPS CURRENT RANGE**

Use a 1 Ω resistor, with a 4W rating. Setup scaling in software: 0V = 0.00 and 2V = 2.00

![Diagram](image2)

**MEASURING 0-100V (d.c. only)**

Input a known voltage of between 0 and 100V (V1). Measure the voltage between IN1 and 0V (V2).

Setup scaling in software: 0V = 0.0

V2 = V1 (Enter with the same number of decimal points, i.e 50.0)

![Diagram](image3)

### VARIOUS OPERATING MODES (4-20mA version)

**MEASURING 4-20mA**

Power supply to meter must be fully floating (isolated from the 4-20mA current loop)

![Diagram](image4)

**USING TWO OM-SGD DISPLAYS IN SAME INSTALLATION**

Each OM-SGD must be powered from a separate, fully floating power supply.

MEASURING 4-20mA USING A USB POWER SUPPLY

DIGITAL HOLD
DIG1 will hold the display

ALARM OUTPUT
Applications that feature an alarm can be connected as above.
ALM1 must not sink more than 10mA maximum each. If supply voltage varies, use an appropriate voltage regulator.

PANELPILOT SOFTWARE

Omega’s PanelPilot software is available for download free of charge from www.omega.com. Easy to install and use, the control software runs under Windows XP, Vista and 7 and 8. The software is used to setup the appearance and operation of the meter and then upload these settings to the meter.

Multiple types of voltmeter are supplied with the software. See www.omega.com for details of available meters.

The software allows the following parameters to be configured:

• Meter type
• Text labels (including units and graph labels)
• Background, graph segment and text colors
• Input scaling / calibration (at two points)
• Decimal points (entered during scaling)
• Splashscreen image selection (to display a user image, such as a logo, when the meter is powered up)
