1. DIO Daughter Board Selection

Omega Engineering, Inc. provides magnetic relay, SSR, open-collector, Photo-MOS relay and isolated digital input daughter boards for I/O control applications.

1.1. How to select daughter board

You must make sure which digital I/O board you choose and what kind applications you designed. Then select suitable daughter board.

■ Selection criteria for output type daughter board

1. Type of contact load -
AC or DC? ; Resistive or inductive or capacitive or lamp? ; Occurrence of back electromotive force or inrush current?
2. Level of contact load -
Power load or small signal?
3. Coil rated voltage -
12Vdc or 24Vdc?
4. Frequency in switching operation
5. Demand for life in switching operation
6. Connector type of digital I/O board -
20-pin or 50-pin Flat cable or D-sub cable?
7. Mounting -
Panel mounting or DIN-rail mounting

■ Selection criteria for input type daughter board

1. Type of input signal -
AC or DC? Dry contact or wet contact?
2. Level of input signal
3. Connector type of digital I/O board -
20-pin or 50-pin Flat connector or D-sub connector?
4. Mounting -
Panel mounting or DIN-rail mounting

16-channel isolated digital input and 8-channel relay output daughter board

2. OME-DB-16R

16 Channel Relay Output Board

The OME-DB-16R, 16-channel Relay Output Board, consists of 16 Form C relays for efficient switch of load by programmed control. The OME-DB-16R can be connected to DIO-64, A-626, A82x DAS board and PCI-series multi-function board or any other compatible DAS board with the 20-pin connector. The relays are energized by applying 5 volt signal to the appropriate relay channel on the 20-pin flat cable connector. The 16 enunciator LEDs, one for each relay, light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for external power supply.

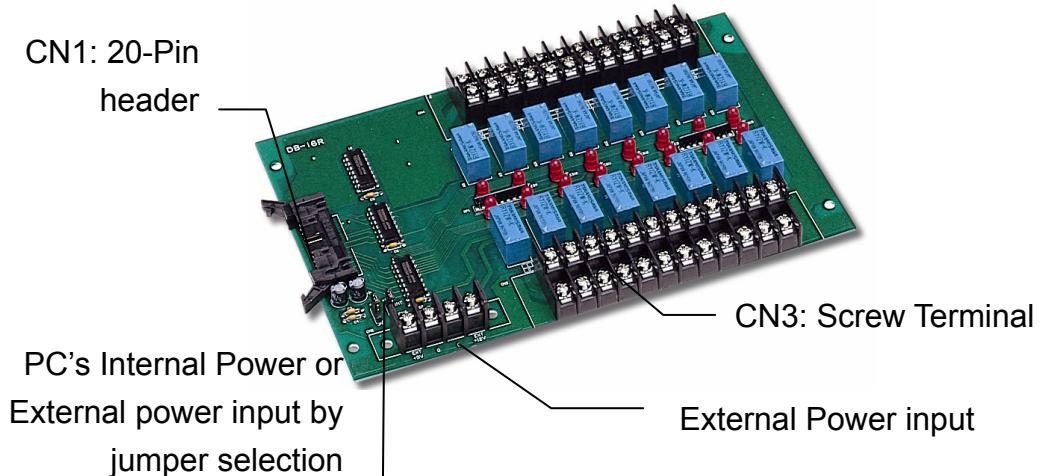

2.1. Features

- 16 Form C Relays
- Accept 20-pin connector to control 16 form c relays, for use with A-82X, A-62X, DIO-64, PCI-1800, PCI-1200, PCI-1002 series digital output port or any compatible digital output port.
- LED status indicator
- Screw terminals for field wiring

2.2. Specifications

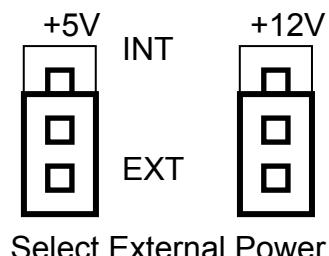

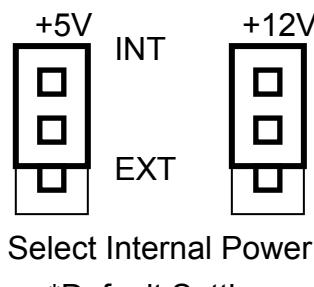

- Type : Form C
- Nominal load :0.5 A/120 VAC , 1A /24 VDC
- Max. Switching Power :60 VA,24 W
- Max. Switching Voltage :120 VAC , 60 VDC
- Max. Switching Current :1 A
- Life Expectancy :Electrical (20 Millions Cycles)
- Time Value : Operate6 ms
- Release3 ms
- Control Logic :Input TTL high (+5 V) , relay on
- Power consumption :12 V /0.53 A ; 5V /0.2 A
- Dimensions: 8 inch (205mm) x 4.5 inch (114mm)
- Operating Temperature :..... 0 - 60°C
- Storage Temperature :0 - 60°C
- Humidity :5% to 90% Non-condensing

2.3. Layout

2.4. Jumper Settings

OME-DB-16R will use PC's internal power or external power supply as configured by the jumper.

*Default Setting

Note: INT: Internal Power Source
EXT: External Power Source

It is not advisable to use multiple OME-DB-16Rs in one PC if their jumpers are set for using the internal power. Some PC's power supply is small and used to power PC only. The power supply will be damaged, if multiple OME-DB-16Rs are using the internal power. You should calculate the power consumption of OME-DB-16R and make sure to use appropriate setting.

2.5. Pin Assignment

The CN1 is 20-pin header linked to TTL digital I/O board via 20-pin flat cable.
 The CN2 is an external power input connector for external power input wiring.
 The CN3 and CN4 are relay contact screw terminal blocks.

DB-16R - CN1: 20-pin Connector

3. OME-DB-16P

16 Opto-Isolated Digital Input Terminal Board

The OME-DB-16P is a 16 channel isolated digital input daughter board for OME-A-82x DAS board or OME-812PG DAS boards. The optically isolated inputs of the OME-DB-16P consist of a bi-directional LED with a resistor for current sensing. You can use the OME-DB-16P to sense DC signal from TTL levels up to 24V. You can also use OME-DB-16P to sense a wide range of AC signals. The OME-DB-16P registers a constant logic high if the frequency of the input AC signal is greater or equal to 1 kHz, and the voltage of the AC signal is at least 4 Vrms. If you are using AC input signal, you should short the AC filter Jumper. You can use the board to isolate the computer from large common-mode voltages, ground loops, and voltage spikes that often occur in industrial environments.

3.1. Features

- 16 optically isolated digital inputs
- Connects to OME-DIO-64, OME-A-62X, OME-A-82x data acquisition boards
- AC/DC Signal Input
- AC Signal Input with filter
- Input buffer with voltage comparators
- 3,000 V isolation
- LED indicator on each channel

3.2. Specifications

- I/O connector Electrical Specifications
 - Configuration: optically isolated digital input channels
 - Compatibility: TTL compatible
- Digital Inputs
 - Number of channels: 16 Channels,
 - each channel with its own ground reference isolated from other channels
 - Maximum input voltage: 24 VDC or 24 VAC

Digital Logic Level:

Level	Minimum	Maximum
Input low voltage (DC or peak AC)	0	+/-1V
Input high voltage DC 1kHz AC	+/- 3.8VDC 4Vrms	+/-24VDC 24VAC

Input impedance: 1.2K ohms

Input Current

5V inputs : 4 mA /channel

24V inputs : 20 mA /channel

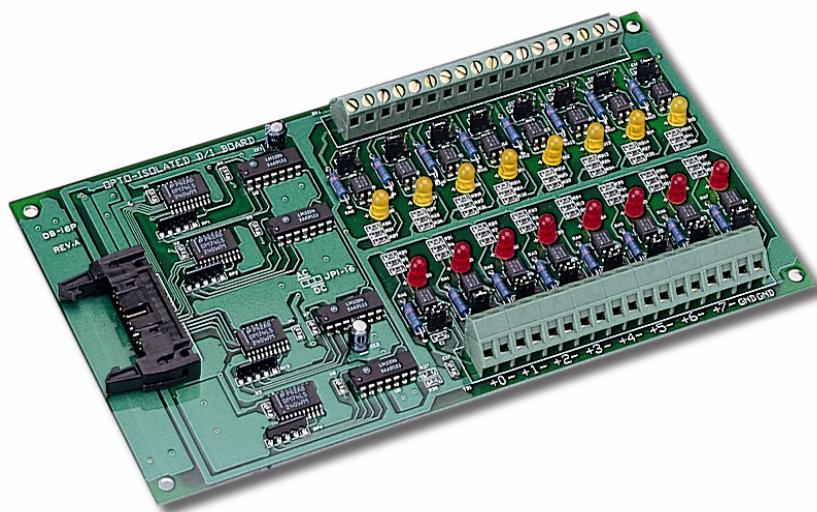

Input Response Time: 20µs without filter / 2.2ms with filter

- Power consumption 220mA/ +5V (Max) from PC
- Board Dimension : 8.06 " (205mm) X 4.5 " (114mm)
- Operating Environment
 - Component temperature: 0 to 50°C
 - Relativity humidity: 5% to 90% non-condensing
- Storage Environment
 - Temperature: 0-60°C
 - Relative humidity: 5% to 90 % non-condensing

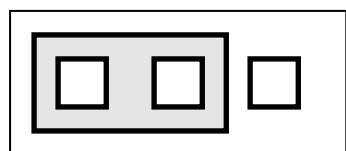

3.3. Applications

- Isolated digital input sensing
- Process monitoring

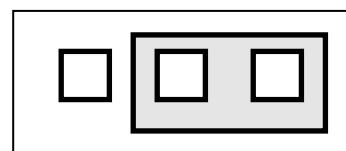

3.4. Layout

3.5. Jumper settings

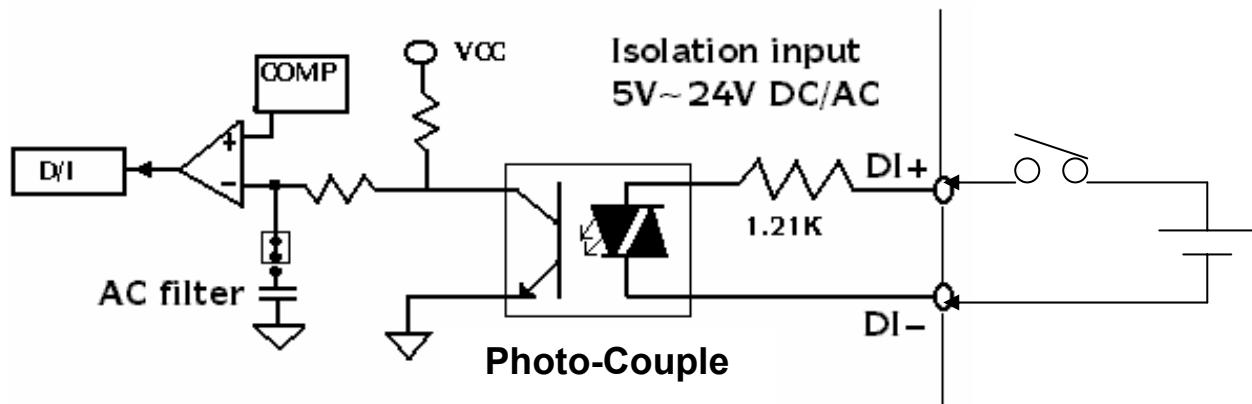

With filter for AC signal

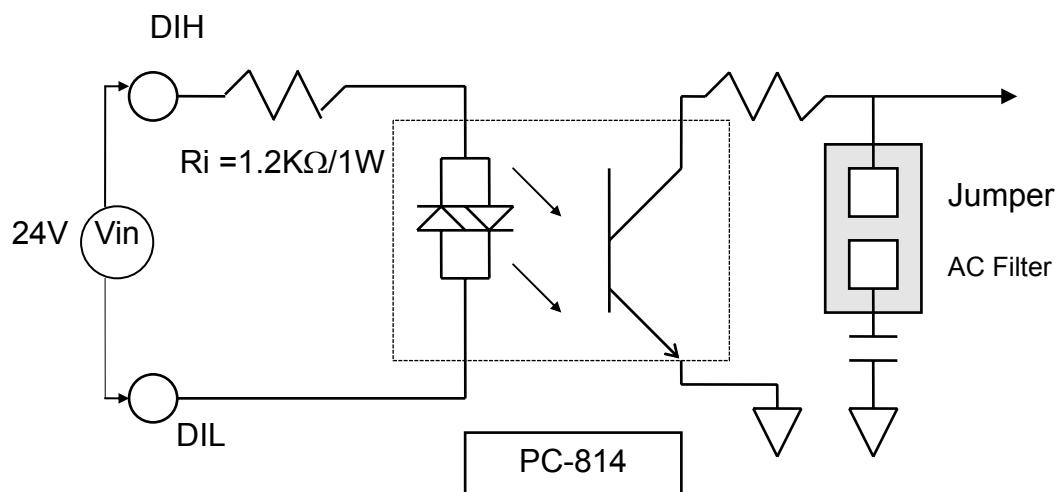

Without filter for DC signal

If you are using AC signal, you must short the AC FILTER jumper. If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20 μ s, set the filter off. If you want a slow response (about 5 to 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

3.6. Isolated Input

The normal input voltage range is 5 to 24 V AC or DC. The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA (If). The default resistor is 1.2KΩ/1 W.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

$$\text{If } V_{in} = 120V \text{ then } R_i = 120(V) / 0.01(A) = 12K\Omega$$

$$P_w = 120(V) \times 0.01(A) = 1.2 W$$

The **Ri** must be replaced by 12KΩ/2W (1.2W)

4. OME-DB-16P8R

The OME-DB-16P8R is a 16-channel isolated/non-isolated input & 8-channel relay output board. The isolated digital input can be used to sense 3.5V to 24V DC signal. The non-isolated digital input is used to sense dry contact. The relay output consists of 16 form C power relays. The user can use this board to isolate the computer from large common-mode voltage, ground loops and transient voltage spike that often occur in industrial environments.

4.1. Specification

- Isolated Digital Input
 - Isolation voltage: 3750 V
 - Input voltage: 3.5 V to 24 V
 - Response time: 10 KHz Max.
- Dry Contact Input (non-isolated input)
 - Logic high: input close
 - Logic low: input open
- Power Relay
 - Type 1 form C (SPDT)
 - Rating:

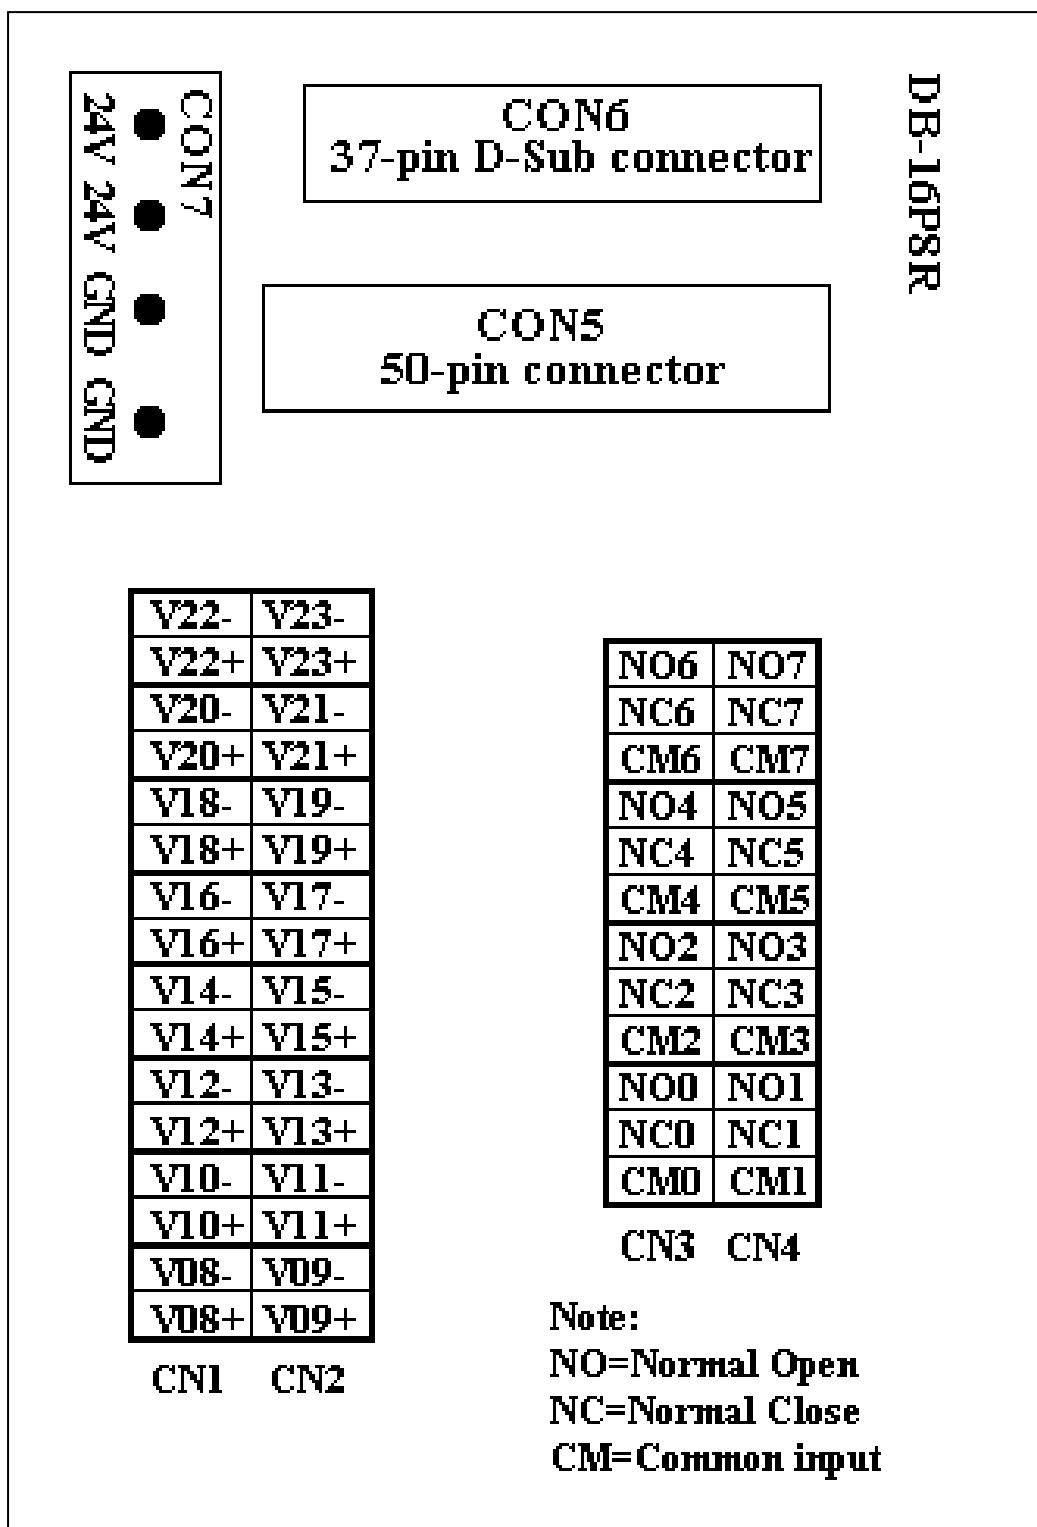

Nominal Load	250 VAC/5 A
MAX. Switching Power	1,250 VA(NO), 750 VA(NC)
MAX. Switching Voltage	250 VAC, 150 VDC
MAX. Switching Current	5 A
 - Life expectancy:

Mechanical	10 millions operations
------------------	------------------------
 - Time Value:

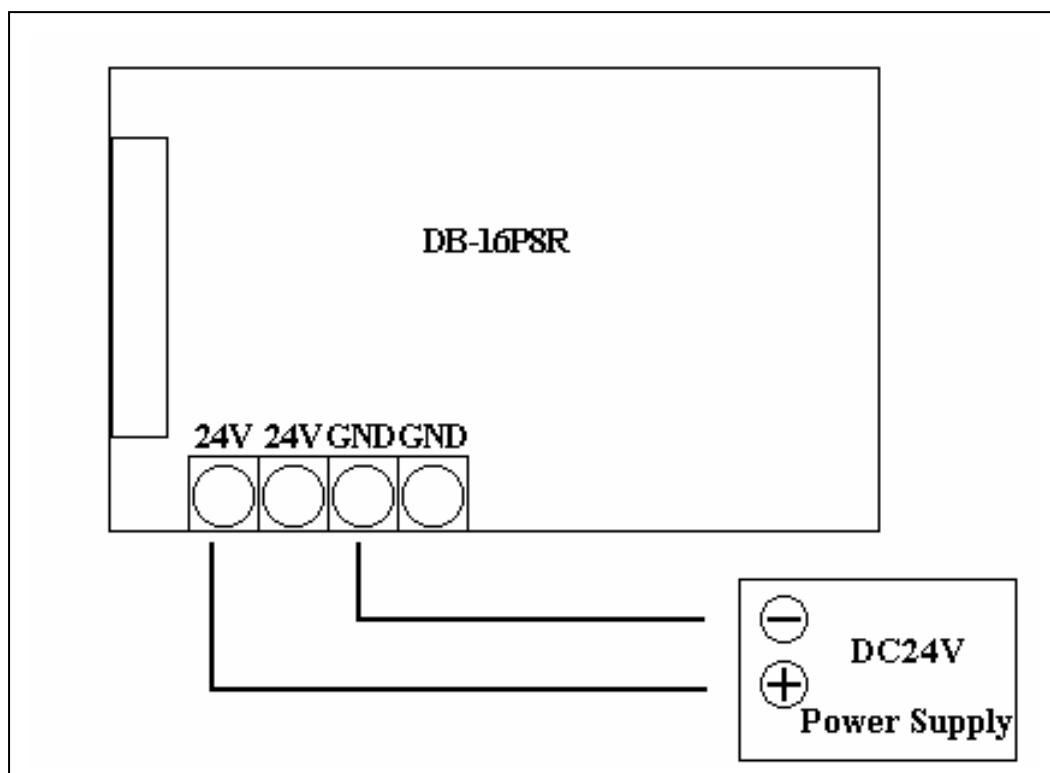

Operate	10 ms
Release	5 ms
- Varistor for power supply
 - Power consumption:

Min	2.5 µA (All relays off)
Max	0.5 A (All relays on)
Relay On	22 mA (for single relay)
- Operating Temperature: 0 ~ 60 °C
- Storage Temperature: -20 ~ 70 °C
- Humility: 5% to 95% non-condensing
- Power consumption: 24V @ 0.3A, 5V @ 0.1A
- Dimension: 130 mm x 210 mm

5. OME-DB-24R / OME-DB-24RD

The OME-DB-24R / OME-DB-24RD; 24-channel Relay Output Board; consists of 24 Form C relays for efficient switching of load by programmed control. The OME-DB-24R can be connected to DIO-24, DIO-48, DIO-D96, DIO-144, PIO-D144, PIO-D96 and PIO-D48 and any other OPTO-22 compatible Digital I/O board. The relays are energized by applying 5 volt signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector (DB-24RD). Twenty-four enunciator LEDs (one for each relay) light when their associated relay is activated. This board provides a screw terminal for external power supply.

5.1. Features

■ OME-DB-24R

- 24 Form C Relays.
- Contact rated up to 0.5 A/120 Vac, 1 A/30 Vdc
- Accept 50-pin OPTO-22 compatible header, For OME-DIO-24, OME-DIO-48, OME-DIO-144 and OME-PIO-series digital output port or any OPTO-22 compatible digital output port.
- LED indicator for relay status.
- Screw terminals for field wiring.

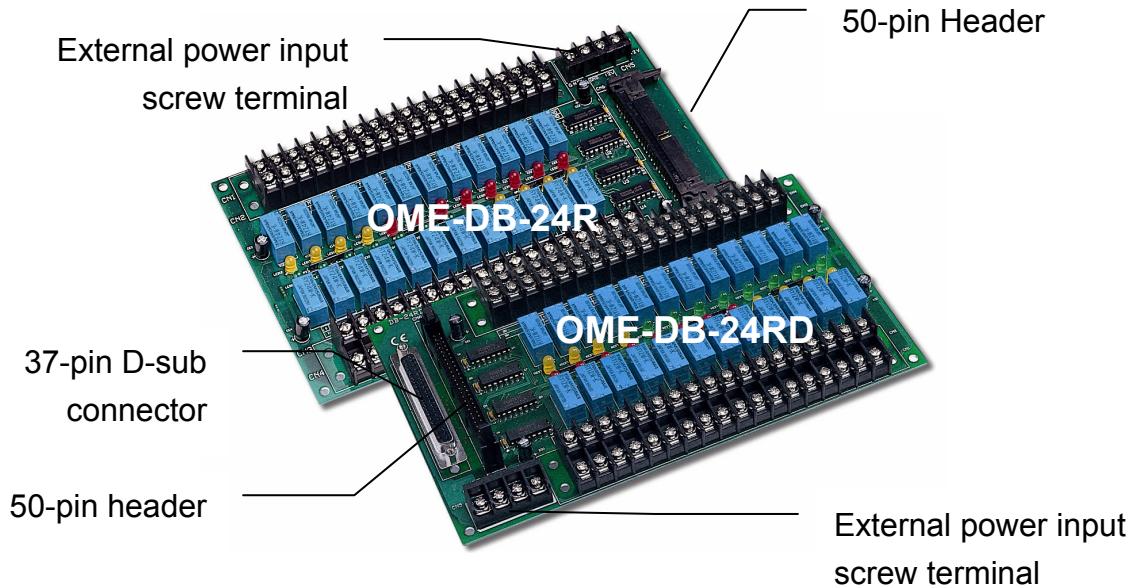

■ OME-DB-24RD

- Accepts 50-pin header and 37-pin D-sub connector
 1. Accepts 50-pin OPTO-22 compatible header for OME-DIO-24, OME-DIO-48, OME-DIO-144 and OME-PIO-series digital output port or any OPTO-22 compatible digital output port.
 2. The 37-pin D-sub connector can be directly connected to OME-PIO-D144, OME-PIO-D96, OME-PIO-D48, OME-PIO-D56 and OME-PIO-D24.
- 24 Form C Relays.
- Contact rate up to 0.5 A/120 Vac , 1 A/30 Vdc
- LEDs' indicate relay status.
- Screw terminals for field wiring.

5.2. Specification

- Type : Form C
- Nominal load : 0.5 A/120 VAC , 1 A/24 VDC
- Max. Switching Power : ... 60 VA,24 W
- Max. Switching Voltage : ... 120 VAC , 60 VDC
- Max. Switching Current : ... 1 A
- Life Expectancy : Electrical (20 Million Cycles)
- Time Value : Operate 6 ms
- Release 3 ms
- Control Logic : Input TTL high (+5V) , relay on
- Power consumption : 12 V /0.53 A ; 5 V /0.2 A
- Dimensions : 8 inch (205mm) x 4.5 inch (114mm)
- Operating Temperature :... 0 - 60°C
- Storage Temperature : 0 - 60°C
- Humidity : 5% to 90% Non-condensing

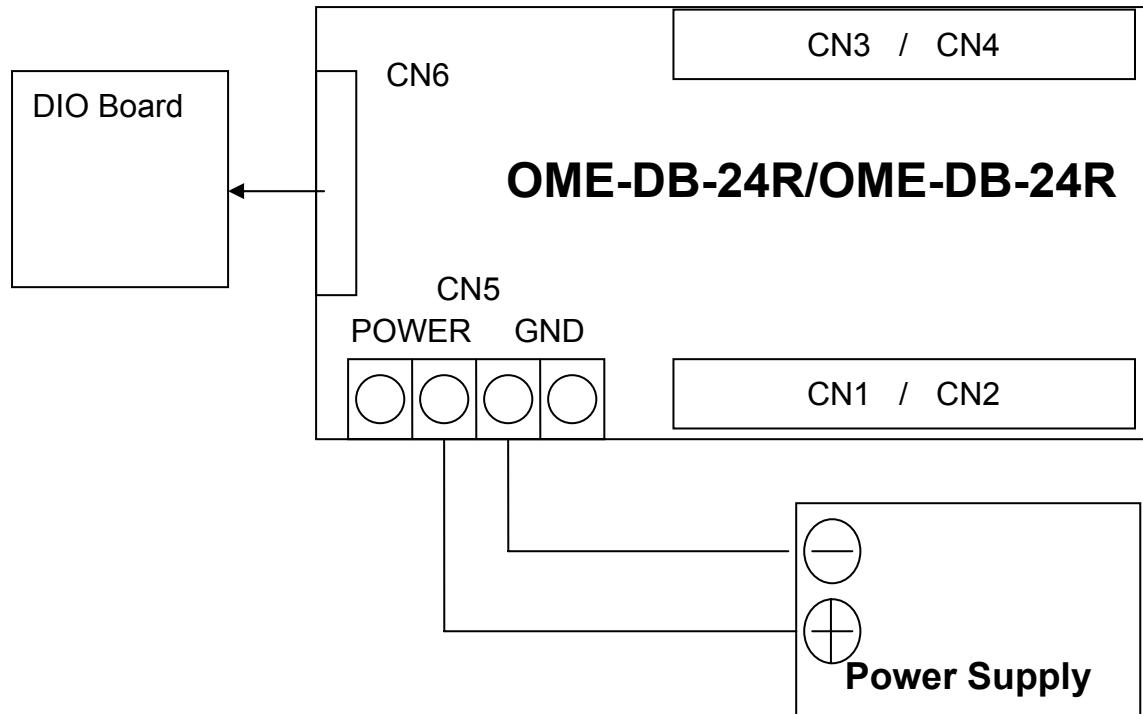

5.3. Layout

OME-DB-24PR and OME-DB-24R support external power supply only.

OME-DB-24R/12V, OME-DB-24RD/12V for DC 12V external power supply

OME-DB-24R/12V, OME-DB-24RD/24V for DC 24V external power supply

6. OME-DB-24PR / OME-DB-24PRD

The OME-DB-24PR/OME-DB-24PRD; the 24-channel power relay output board; consists of 8 form C & 16 form A electromechanical relays for efficient switching of load by programmed control. The contact of each relay can control a 5 A load at 250 VAC/30VDC. The relay are energized by applying 5 volt signal to the appropriated relay channel on the 20-pin header (DB-24PR only), 50 pin header and 37-pin D-sub connector (DB-24PRD only). Twenty-four enunciator LEDs (one for each relay) light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for power supply. CN1, CN2, CN3 and CN4 are terminal blocks to connect with wiring. The CN7 is used to connect with OME-DIO-24, OME-DIO-48, OME-DIO-144 or any OPTO-22 compatible digital output port. The CN6 is used to connect with OME-A-82XPG series, OME-PCI-1800 series, DIO-64 or any compatible digital output port. The OME-DB-24PRD has one 37-pin D-sub connector. The 37-pin D-sub connector can be directly connected to PIO-D144, PIO-D96, PIO-D48 and PIO-D24's 37-pin D-sub connector.

6.1. Features

■ OME-DB-24PR

- 16 Form A relays, 8 form C relays.
- DB-24PR accept two kind connectors:

CN6 accepts 20-pin header to control 8 Form C (channel 0~7) relays and 8 form A relays (channel 8~15).

CN5 accepts 50-pin header to control 8 Form C relays and 16 form A relays.

- Each varistor protects one contact.
- LEDs' indicate relay status.

■ OME-DB-24PRD

- OME-DB-24PRD accept two kind connectors:

One 37-pin D-sub connector for OME-PIO-D144, OME-PIO-D96,

OME-PIO-D48, OME-PIO-D56 and OME-PIO-D24 digital I/O boards

One 50-pin header for OME-DIO-144, OME-DIO-96, OME-DIO-48 and

OME-DIO-24 digital I/O boards. Other features are the same as

OME-DB-24PR.

6.2. Specifications

- Form A relays

Type : 1 form A (SPST-NO)

Rating :

Nominal Load	5A 250 VAC or 30 VDC
Max. Switching Power.....	90 W
Max Switching Voltage.....	270 VAC,150 VDC.
Max. Switching Current.....	5A

Life expectancy:

Mechanical.....	20 millions operations
-----------------	------------------------

Time Value:

Operate.....	10 ms
Release.....	5 ms

- Form C Relays

Type : 1 Form C (SPDT)

Rating :

Nominal Load	250 VAC / 5 A.
MAX. Switching Power.....	1,250 VA(NO) , 750 VA(NC)
MAX. Switching Voltage.....	250 VAC , 150 VDC
MAX. Switching Current	5A

Life expectancy:

Mechanical	10 millions operations
------------------	------------------------

Time Value:

Operate.....	10 ms
Release.....	5 ms

- Varistor:

Power consumption:

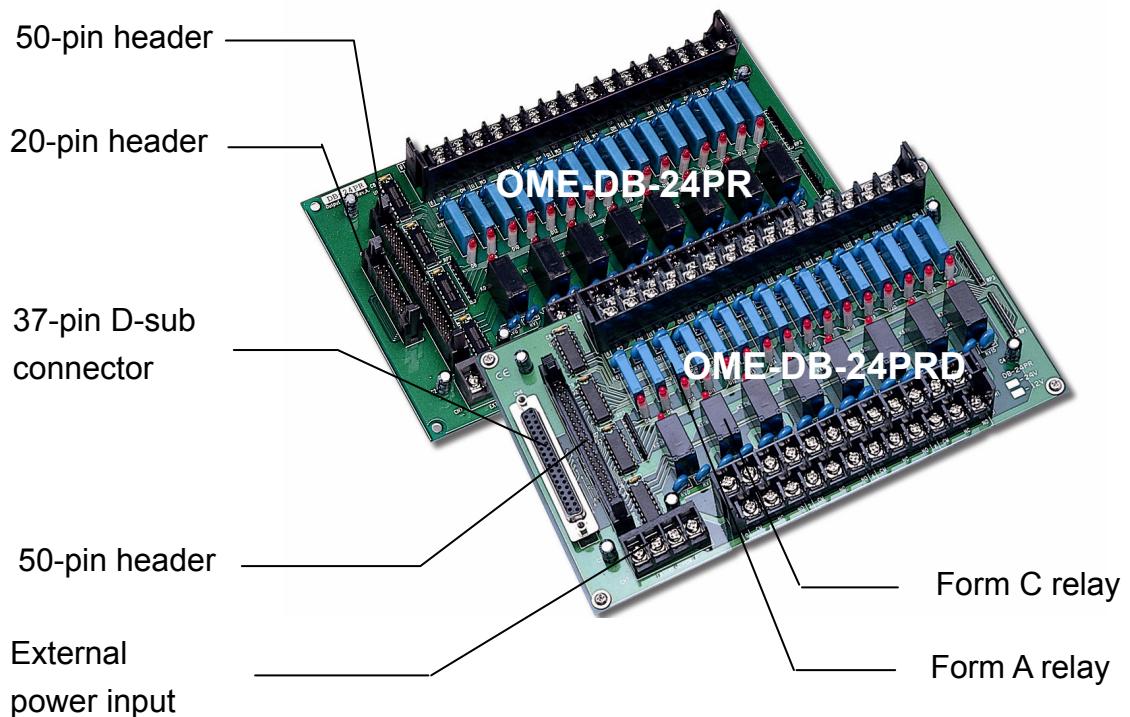

Min :	2.5 uA (All relays off)
Max :.....	0.5 A (All relays on)
1 relay On :	22 mA

- Dimensions: 1339 (W) mm X 220 (D) mm

6.3. Applications

- Test Automation
- Laboratory & Factory Automation
- On/Off Control

6.4. Layout

Note :

OME-DB-24PR, OME-DB-24PRD provides external power input only.

The input power has two versions:

External Power +12 Vdc input for 12 V Version

External Power +24 Vdc input for 24 V Version

7. OME-DB-24C

24-Channel Open-Collector Output Board

The OME-DB-24C has 24 channels of optically isolated digital outputs, arranged into four isolated banks. Each digital output offers a Darlington transistor and integral suppression diode for inductive load. The board interfaces to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The OME-DB-24C has one 37-pin D-sub connector, one 50-pin OPTO-22 compatible male header and one 20-pin male header.

The transistor is energized by applying a 5 volt signal to the appropriate input channels on the 50-pin header or 20-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs (one for each transistor) light when their associated transistor is activated. Because there is a 37-pin D-sub connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose open-collector output board.

7.1. Features

- Group A (low nibble) and Group B (high nibble) each have a 4-channel high current open-collector output. The maximum load is 600mA per channels
- Group A (high nibble), Group B (low nibble), Group C (byte) and Group D has 8-channel open-collector output each. The maximum load is 100mA per channels.
- Accept 20-pin connector to control 8 high current output channel and 8 low current output channels.
- LEDs indicate each channel and power status.
- 3,750 V optical isolation
- 5 Vdc logic levels

7.2. Applications

- LEDs indicate the status of transistor.
- Screw terminals for easy field wiring.
- OPTO-22 Compatible connector.
- D-sub connector 37-pin connector connects directly to OME-PIO-D144, OME-PIO-D96 and OME-PIO-D24 board or another OPTO-22 board with OME-ADP-37 adapter.

7.3. Specification

The maximum loading current of each high current output channel: 600 mA

The maximum loading current of each low current output channel: 100 mA

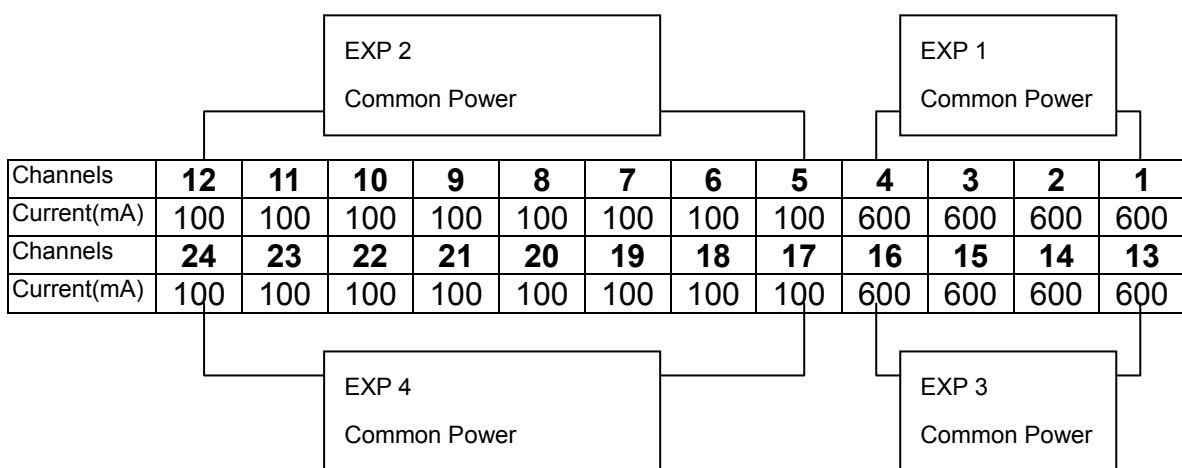

Power consumption: DC+5V @ 0.4 A max.

Dimension: 130mm X 220mm

Operating Temperature: 0 - 60 °C

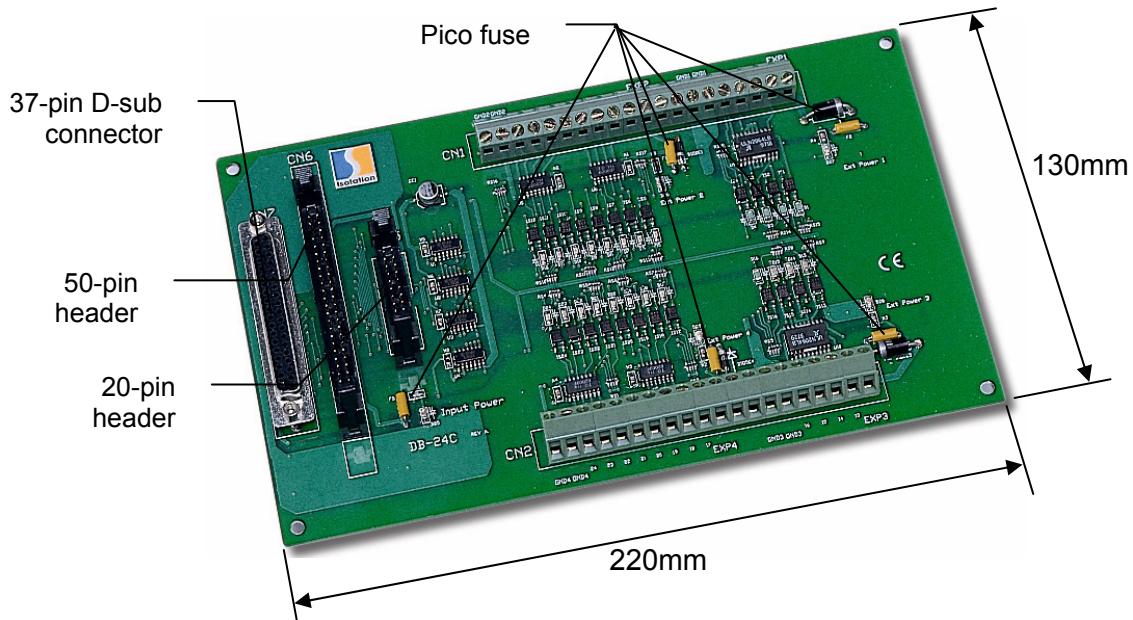

Storage Temperature: -20 ~ 70 °C

Humidity: 5% to 90% non-condensing

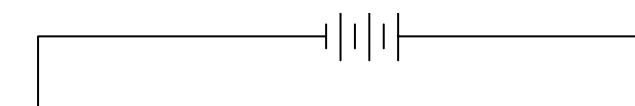

Power	EXP1	EXP2	EXP3	EXP4
Input Voltage	5~24 VDC	5~24 VDC	5~24 VDC	5~24 VDC

8. OME-DB-24OD

24-Channel Open Drain Output Board

The OME-DB-24OD has 24 channels of optically isolated digital outputs. The board is the interface for field logic signals, elimination ground-loop problems and isolating the host computer from damaging voltages. The OME-DB-24OD has a single 37-pin D-sub connector, one 50-pin OPTO-22 compatible male header and a 20-pin male header. The transistor is powered by applying a 5-volt signal to the appropriate input channel on the 50-pin header, the 20-pin header or the 37-pin D-sub connector. Twenty-four indicator LEDs (one for each transistor) are lit when their associated transistor is activated. The board may be used to interface with any TTL output board, allowing it to be used as a general purpose open-drain output board.

8.1. Features

- 24-channel high current open-drain output
- Connects directly to OPTO-22 compatible board
- 24-channel max load 400 mA(per channel)
- LEDs indicate each channel and power status
- 3,750 V optical isolation
- 5 VDC logic levels

8.2. Specification

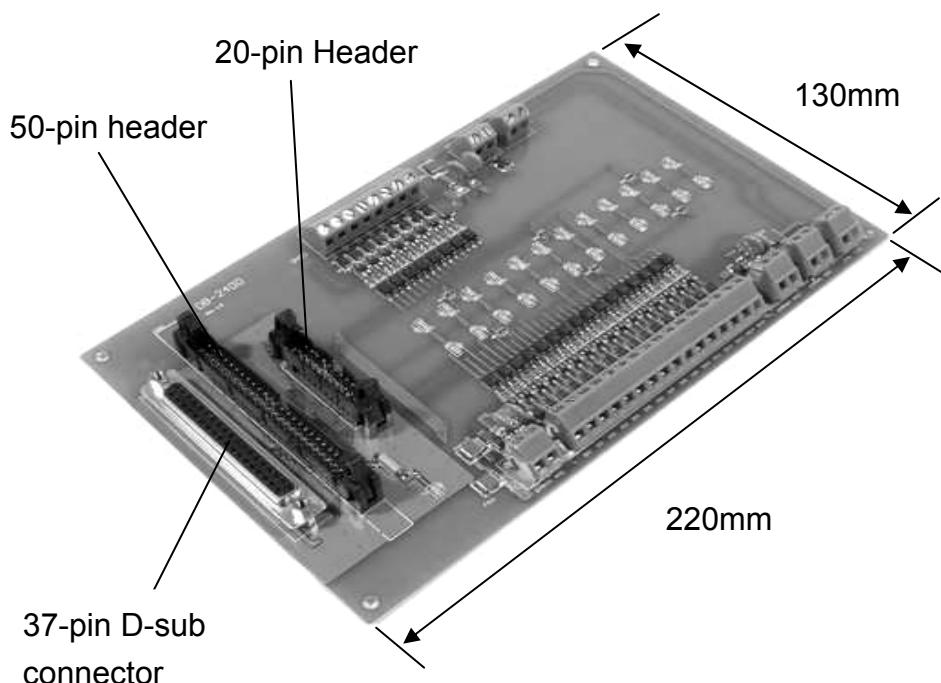

- The maximum loading current of each high current output channel: 400 mA
- Power consumption :DC+5V @ 0.4 Amax
- Dimension :1305mm X 220mm
- Operation Temperature : 0 to 60 °C
- Storage Temperature : -20 to 70 °C
- Humidity : 5% to 90% non-condensing

8.3. Application

- On/Off control
- Energy management
- Test Automation
- Process Control

9. OME-DB-24POR

24-Channel Photo Output Board

The OME-DB-24POR includes 24 normally open, Form A, Photo-MOS relays. The board interfaces to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the OME-DB-24POR to switch loads up to 350 VAC and 130 mA. The relay is energized by applying a 5 volt signal to the appropriate relay channel on the 50-pin OPTO-22 compatible connector or 37-pin D-sub connector. Twenty-four indicators LEDs (one for each relay) light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general-purpose photo-MOS relay output board.

9.1. Features

- 24 Optically isolated digital output channels
- 24 form A photo-MOS relays
- Switch up to 0.13 A (max.) at 350 VAC (max.)
- 5 VDC logic levels
- 5,000 V optically isolation
- LEDs indicated relay status
- Built-in fuses and diodes to protect from wrong connection of external power supply
- 50-pin header connector directly to OME-DIO-24, OME-DIO-48, OME-DIO144 / OME-PIO-D144, OME-PIO-D96, OME-PIO-D56, OME-PIO-D48, OME-PIO-D24 and other OPTO-22 compatible digital output boards
- D-sub 37-pin connector connects directly to OME-PIO-D144, OME-PIO-D96, OME-PIO-D56, OME-PIO-D48 and OME-PIO-D24 digital output boards

9.2. Applications

- ON/OFF Control
- Energy management
- IC factory Automation
- Test Automation

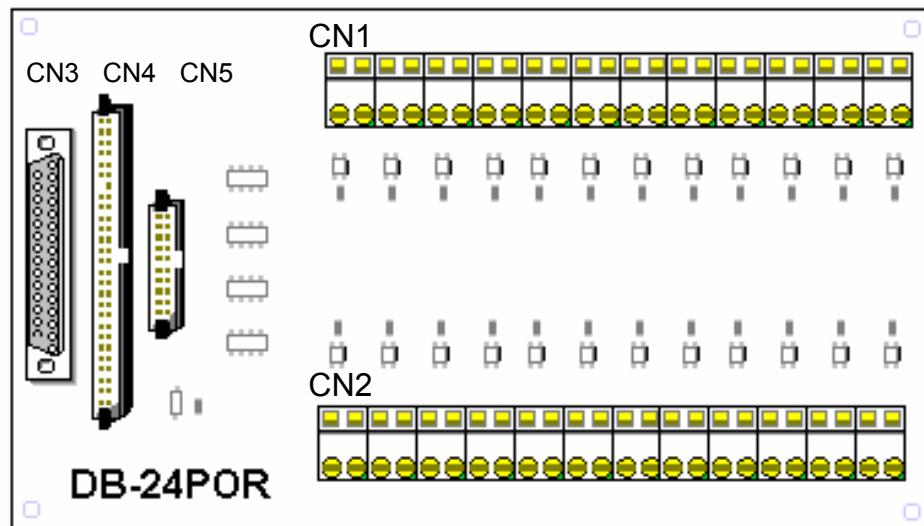

9.3. Specification

■ Photo-MOS Relay

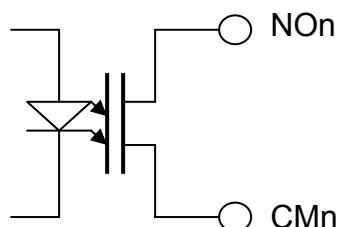

Item	Spec.	Note

10. OME-DB-24SSR

24-Channel Solid State Relay Board

The OME-DB-24SSR includes 24 normally open, or Form A, solid-state relays. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the OME-DB-24SSR to switch high voltage loads up to 240 VAC and 4 A. The relay is energized by applying a 5 volt signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs (one for each relay) light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose solid state relay output board.

10.1. Features

- 24 optically isolated digital output channels
- 24 Form A solid-state relays
- Switch up to 4 A at 250 VAC
- 5V DC logic levels
- 2,500 VAC optical isolation
- Built-in varistor
- Screw terminal for easy field wiring
- Can choose plug-in screw-terminal, modification and ensuring simple installation, modification and maintenance
- 50-pin header connects directly to OME-DIO-24, OME-DIO-48, OME-DIO144, OME-PIO-D144, OME-PIO-D96, OME-PIO-D48, and OME-PIO-D24 OPTO-22 compatible board
- D-Sub 37-pin connector connects directly to OME-PIO-D144, OME-PIO-D96, OME-PIO-D48 and OME-PIO-D24 board or another OPTO-22 board with OME-ADP-37 adapter

10.2. Applications

- ON/OFF control
- Energy management
- Test Automation
- Process Control

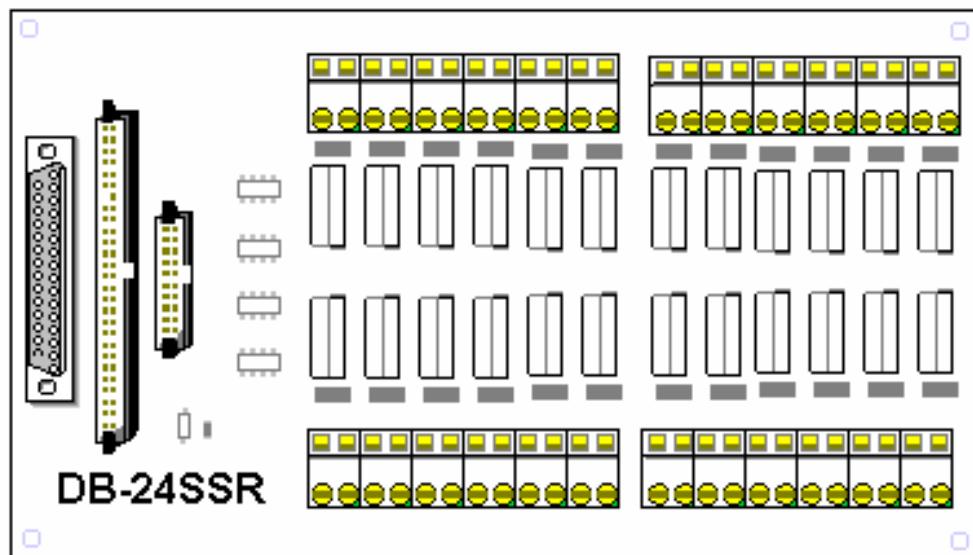

10.3. Specification

■ Solid State Relay (AC)

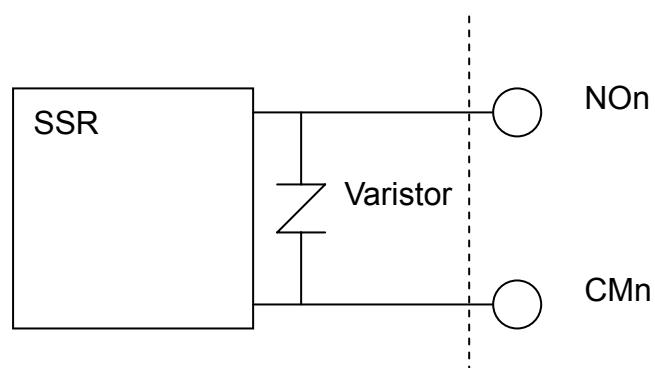

Load Voltage	50~250 VAC
Maxi. Load Current	4 A
Repetitive Peak OFF Voltage	600 V
Max. "ON-state" Voltage Drop	1.5 V
Surge Current	50 A
Maxi. "OFF-State" Leakage Current	5 mA
Mini. Load Current	20 mA
Breakdown Voltage	2,500 V (Between Input & Output)
Insulation resistance. i.	100,000,000 Ω(min.)
Operate time , 1/2 cycle of voltage sine wave	1 mS (max.)
Zero Crossing	Yes
Snubber Circuit	Yes

- Power Consumption: +5V @ 0.4A (max.)

11. OME-DB-24P

24 Photo-Isolated Digital Input Terminal Board

The general specification of OME-DB-24P is the same as OME-DB-16P. But OME-DB-24P has one Opto-22 compatible 50-pin connector and can be used for 24 channels of photo-isolated digital inputs. The OME-DB-24PD is almost the same as OME-DB-24P except it has one 37-pin D-sub connector.

11.1. Features

- 24 optically isolated digital input
- Connected to OME-DIO-24, OME-DIO-48, OME-DIO-144 or any OPTO-22 compatible connector of digital input / output board
- OME-DB-24PD connect to OME-PIO-D144 , OME-PIO-D96 , OME-PIO-D48 and OME-PIO-D24
- AC/DC Signal Input
- AC Signal Input with filter
- Input buffer with voltage comparators
- 1,000 V isolation
- Each channel has its LED indicator

11.2. Applications

- Isolated digital input sensing
- Process monitoring

11.3. Specification

- I/O connector Electrical Specifications

Configuration: Optically isolated digital input channels

Compatibility: TTL compatible

- Digital Input:

Number of channels: 24

each channel with its own ground reference

isolated from other channels

Maximum input voltage: 24 VDC or 24 VAC

Digital Logic Level:

Level	Minimum	Maximum
Input low voltage (DC or peak AC)	0	+/-1 V
Input high voltage DC 1kHz AC	+/- 3.8 VDC 4 Vrms	+/-24 VDC 24 VAC

Input impedance: 1.2 KΩ

Input Current:

5V inputs : 4 mA /channel

24V inputs : 20 mA /channel

Input Response Time : 20 µs without filter/2.2 ms with filter

- Power consumption : OME-DB-24P 290 mA +5 V (Max) from PC

- Board Dimensions : 9.7 " (220mm) X 5.7" (130mm)

- Operating Environment

Component temperature: 0 to 50°C

Relativity humidity: 5% to 90% non-condensing

- Storage Environment

Temperature: 0 to 60°C

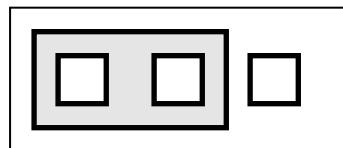

Relative humidity: 5% to 90% non-condensing

11.4. Layout

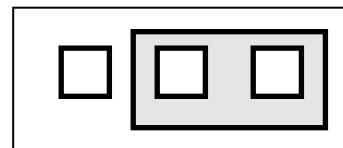

OME-DB-24P / OME-DB-24PD

11.5. Jumper setting

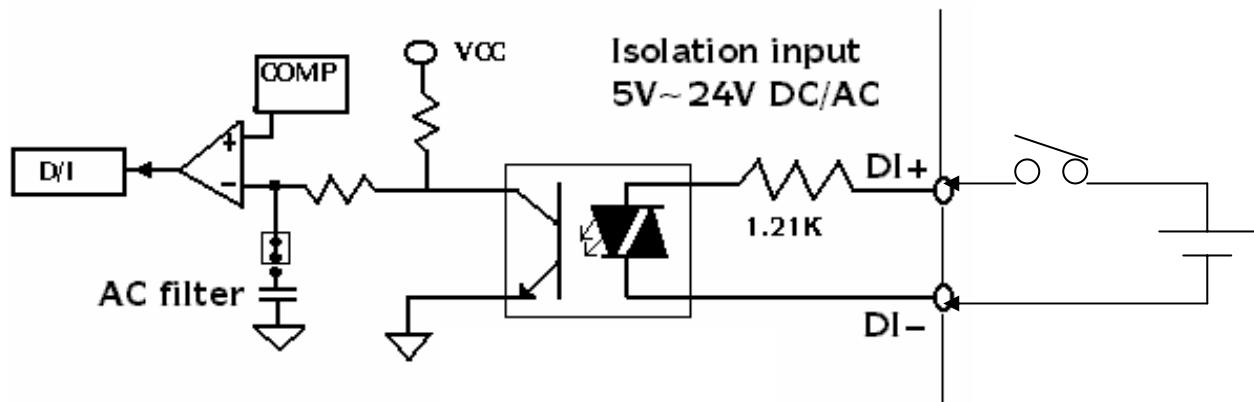

With filter for AC signal

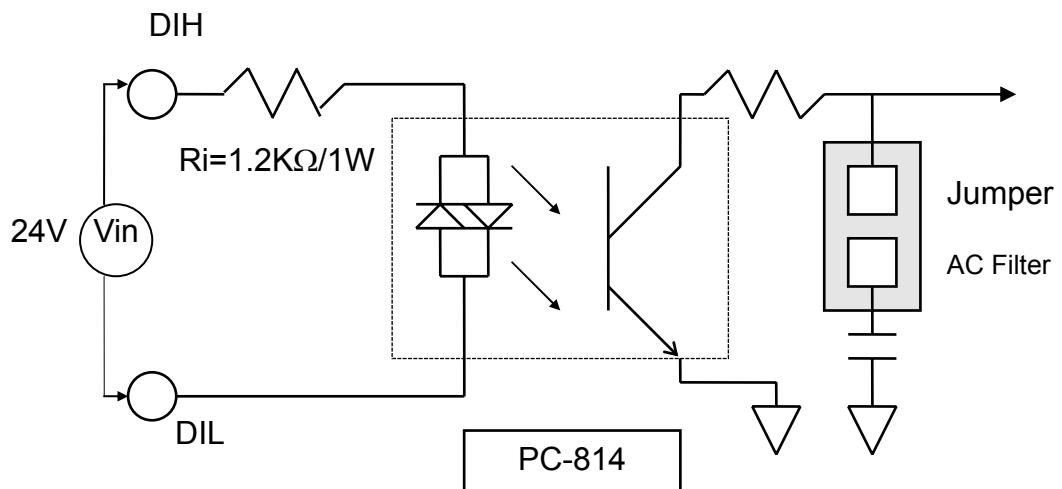

Without filter for DC signal

If you are using AC signal, you must short the AC FILTER jumper. If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20 μ s, set the filter off. If you want a slow response (about 5 to 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

11.6. Isolated Input

The normal input voltage range is 5 to 24 V AC or DC. The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA (If). The default resistor is 1.2 K Ω /1 W.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

$$\text{If } V_{in} = 120V \text{ then } R_i = 120(V) / 0.01(A) = 12 K\Omega$$

$$P_w = 120(V) \times 0.01(A) = 1.2 W$$

The **Ri** must be replaced by 12 K Ω /2 W (1.2 W)

12. Configuration

12.1. Connect to OME-DIO Board

OME-DB-16P / OME-DB-16R connect to 20-pin digital input / output connector

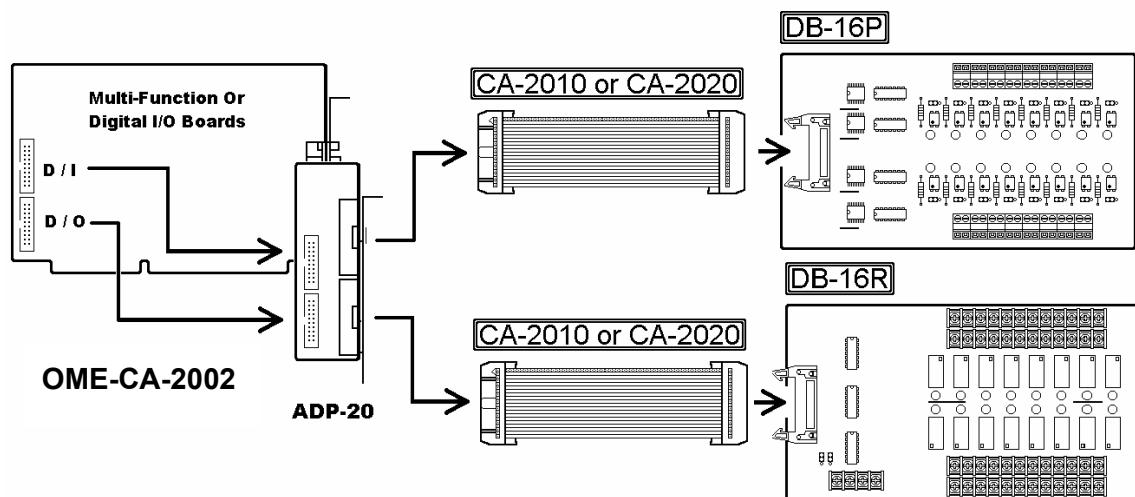

OME-DB-16P linked to digital input port of multi-function board

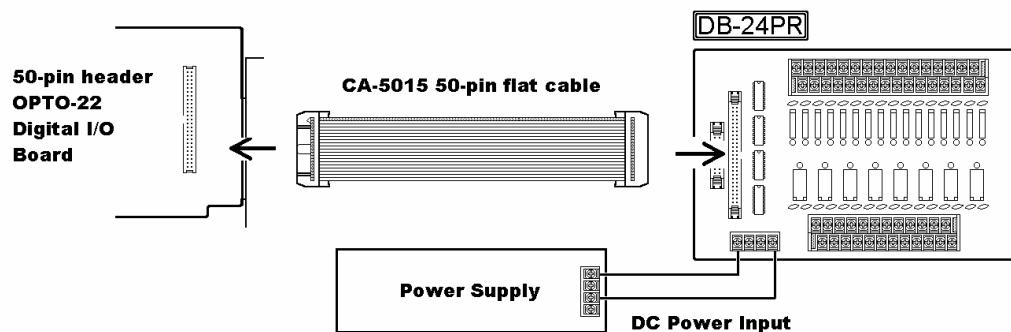

OME-DB-16R linked to digital output port of multi-function board

The OME-DB-16P / OME-DB-16R linked to Multi-Function board via OME-ADP-20 extender.

50-pin OPTO-22 compatible connector directly connected

OME-DIO-24

OME-DIO-48

OME-DIO-144

OME-PIO-D144

OME-PIO-D96

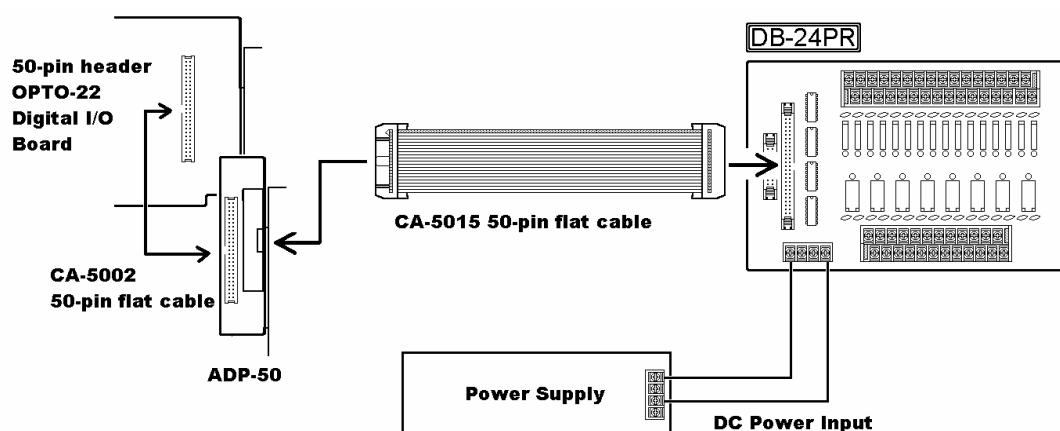

OME-PIO-D48

OME-DB-24R / OME-DB-24RD

OME-DB-24PR / OME-DB-24PRD

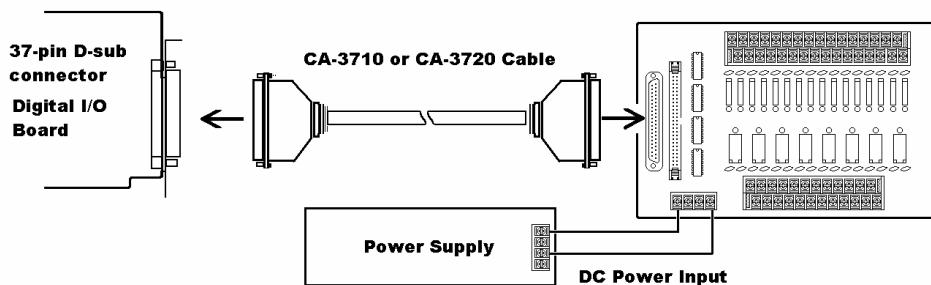

OME-DB-24C / OME-DB-24POR

OME-DB-24SSR

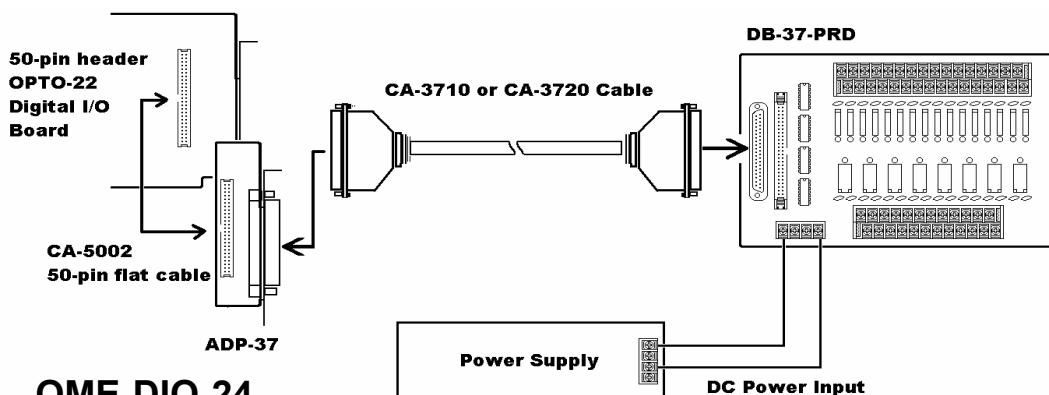

Connect to 37-pin D-sub connector

**OME-PIO-D144 / OME-PIO-D96 /
OME-PIO-D48**

50-pin header converts to 37-pin
D-sub connector via the OME-ADP-37

WARRANTY/DISCLAIMER

OMEGA ENGINEERING, INC. warrants this unit to be free of defects in materials and workmanship for a period of **13 months** from date of purchase. OMEGA's WARRANTY adds an additional one (1) month grace period to the normal **one (1) year product warranty** to cover handling and shipping time. This ensures that OMEGA's customers receive maximum coverage on each product.

If the unit malfunctions, it must be returned to the factory for evaluation. OMEGA's Customer Service Department will issue an Authorized Return (AR) number immediately upon phone or written request. Upon examination by OMEGA, if the unit is found to be defective, it will be repaired or replaced at no charge. OMEGA's WARRANTY does not apply to defects resulting from any action of the purchaser, including but not limited to mishandling, improper interfacing, operation outside of design limits, improper repair, or unauthorized modification. This WARRANTY is VOID if the unit shows evidence of having been tampered with or shows evidence of having been damaged as a result of excessive corrosion; or current, heat, moisture or vibration; improper specification; misapplication; misuse or other operating conditions outside of OMEGA's control. Components which wear are not warranted, including but not limited to contact points, fuses, and triacs.

OMEGA is pleased to offer suggestions on the use of its various products. However, OMEGA neither assumes responsibility for any omissions or errors nor assumes liability for any damages that result from the use of its products in accordance with information provided by OMEGA, either verbal or written. OMEGA warrants only that the parts manufactured by it will be as specified and free of defects. OMEGA MAKES NO OTHER WARRANTIES OR REPRESENTATIONS OF ANY KIND WHATSOEVER, EXPRESS OR IMPLIED, EXCEPT THAT OF TITLE, AND ALL IMPLIED WARRANTIES INCLUDING ANY WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE HEREBY DISCLAIMED. LIMITATION OF LIABILITY: The remedies of purchaser set forth herein are exclusive, and the total liability of OMEGA with respect to this order, whether based on contract, warranty, negligence, indemnification, strict liability or otherwise, shall not exceed the purchase price of the component upon which liability is based. In no event shall OMEGA be liable for consequential, incidental or special damages.

CONDITIONS: Equipment sold by OMEGA is not intended to be used, nor shall it be used: (1) as a "Basic Component" under 10 CFR 21 (NRC), used in or with any nuclear installation or activity; or (2) in medical applications or used on humans. Should any Product(s) be used in or with any nuclear installation or activity, medical application, used on humans, or misused in any way, OMEGA assumes no responsibility as set forth in our basic WARRANTY/DISCLAIMER language, and, additionally, purchaser will indemnify OMEGA and hold OMEGA harmless from any liability or damage whatsoever arising out of the use of the Product(s) in such a manner.

RETURN REQUESTS/INQUIRIES

Direct all warranty and repair requests/inquiries to the OMEGA Customer Service Department. BEFORE RETURNING ANY PRODUCT(S) TO OMEGA, PURCHASER MUST OBTAIN AN AUTHORIZED RETURN (AR) NUMBER FROM OMEGA'S CUSTOMER SERVICE DEPARTMENT (IN ORDER TO AVOID PROCESSING DELAYS). The assigned AR number should then be marked on the outside of the return package and on any correspondence.

The purchaser is responsible for shipping charges, freight, insurance and proper packaging to prevent breakage in transit.

FOR **WARRANTY** RETURNS, please have the following information available BEFORE contacting OMEGA:

1. Purchase Order number under which the product was PURCHASED,
2. Model and serial number of the product under warranty, and
3. Repair instructions and/or specific problems relative to the product.

FOR **NON-WARRANTY** REPAIRS, consult OMEGA for current repair charges. Have the following information available BEFORE contacting OMEGA:

1. Purchase Order number to cover the COST of the repair,
2. Model and serial number of the product, and
3. Repair instructions and/or specific problems relative to the product.

OMEGA's policy is to make running changes, not model changes, whenever an improvement is possible. This affords our customers the latest in technology and engineering.
