FLOW SWITCH

Operation Manual

INSTALLATION

1. Paddle length established approximate actuation setting of a Flow Switch unit. Paddle length is decided according to the lowest point of paddle while actuating the reed switch and the diameter of the pipe. Cut off the paddle at proper pipe size mark or wherever desired but not less than 1" left.
 2. The paddle must be parallel to the cutting face of a pipe and the mounting screw is 1" PT.
 3. The FLOW mark on the screw hexagon must be parallel to the pipe and the ground.
 4. Before installing the unit to a tee pipe, be sure to apply tape seal to the screw then tighten up.
- It is not recommended to the 1" PT plastic pipe.

CAUTION

1. The pressure and temperature ranges as shown in the catalog, must not be exceeded and also take the abrupt pressure and temperature into considerations.
2. Operating temperature changes do affect switch set points. In case of the liquid temperature would vary with the specific gravity changes during processing, please contact us for assistance.
3. The flow switch is designed for shock and vibration resistance. However, shock and vibration should be as minimized as possible.
4. Excessive contamination in fluid might inhibit paddle operation, occasional wipe-down would be necessary.
5. Electrical entry and mounting require sealing from moisture.
