AIR PRESSURE REGULATOR FOR HIGH FLOW APPLICATIONS

PRG700 Series

PRG700-2, shown actual sizé.

- High Flow Capacity-Up to 80 scfm
- ✓ Output Pressure Insensitive to Flow Changes
- Can be Serviced Without **Removing From Air Line**
- ✓ Insensitive to Changes in Flow

The OMEGA PRG700 Series regulators are designed for applications that require high flow capacity and accurate process control. A poppet valve balanced by a rolling diaphragm insures a constant output pressure even during wide supply pressure variations. Stability of regulated pressure is maintained under varying flow conditions through the use of an aspirator tube, which adjusts the air supply in accordance with the flow velocity.
