The DP6060 Series process meter combines two independently programmed analog inputs with powerful math functions to make an advanced meter capable of handling complex math requirements common in the process industry. Various math functions may be applied to the inputs including addition, difference, average, multiplication, division, ratio, and more. A customizable dual-line display allows a wide variety of input variables, math calculations, or units and tags to be displayed based on your application needs.

Sunlight readable display models have an extraordinarily bright LED display. The DP6060 has two red LED displays, an upper display 15 mm (0.60") high, and a lower display 12 mm (0.46") high. Each display is a full 6 digits (-999999 to 999999). The displays can be set up to read input channels (A or B), math function channel C, toggle between A & B, B & C, A & C, A & B & C, toggle between channels A, B, or C & units, the max/min of any of the channels, including the math channel (C), set points, gross (without tare) or net (with tare) and gross values of channel A or B, or the MODBUS input. No jumpers to set for input selection. All setup and programming are done via the front panel. Three levels of password protection help maintain the reliability of the programming. The Copy feature is used to copy (or clone) all the settings from one DP6060 to other meters in about 20 seconds! The Copy function is a standard feature on all meters. It does not require a communications adaptor, only an optional cable assembly. The DP6060 minimizes the menu selections by auto-detecting the installed options to determine what menu navigation is required.

**Display:** Both displays are 6 digits (-999999 to 999999), red LEDs with leading zero blanking

- **Upper Display:** 15 mm (0.60") high
- **Lower Display:** 12 mm (0.46") high

**General Specifications**

- **Display:** 8 intensity levels
- **Display Update Rate:** 5/second (200 ms)
- **Overrange:** Display flashes 999999
- **Underrange:** Display flashes -99999

**Display Assignment:** The upper and lower displays may be assigned to process values for Channels A (Ch-A), B (Ch-B), or C (Ch-C), toggle between (Ch-A & Ch-B, Ch-A & Ch-C, Ch-B & Ch-C, and Ch-A, Ch-B, & Ch-C), toggle between Channel and units, show channel gross value (no tare) or toggle net (tare) and gross values, show relay set points, max and min values, or MODBUS input; the second display may also be set to show engineering units or be off, with no display

**Front Panel:** NEMA 4X (IP65)

**Programming Methods:** 4 front panel buttons, digital inputs, PC and software, MODBUS registers, or cloning using copy function

**Noise Filter:** Programmable from 2 to 199 (0 will disable filter)

**Filter Bypass:** Programmable from 0.1 to 99.9% of calibrated span

**Recalibration:** Calibrated at the factory. Recalibration is recommended at least every 12 months

**Max/Min Display:** Max (peak)/min (valley) readings reached by the process are stored until reset by the user or until power to the meter is cycled

**Password:** 3 programmable passwords restrict modification of programmed settings; Pass 1: Allows use of function keys and digital inputs; Pass 2: Allows use of function keys, digital inputs and editing set/reset points; Pass 3: Restricts all programming, function keys, and digital inputs
Non-Volatile Memory: All programmed settings are stored in non-volatile memory for a minimum of ten years if power is lost

Power Options: 85 to 265 Vac 50/60 Hz, 90 to 265 Vdc, 20 W maximum, or jumper selectable 12/24 Vdc ±10%, 15 W maximum

Fuse (External, Required): UL recognized, 5 A maximum, slow blow; up to 6 meters may share one 5 A fuse

Isolated Transmitter Power Supply: 24 Vdc ±5% @ 200 mA maximum (standard), (12/24 Vdc powered models rated @ 100 mA maximum); 5 or 10 Vdc @ 50 mA maximum, selectable with internal jumper J4

Normal Mode Rejection: Greater than 60 dB at 50/60 Hz

Isolation: 4 kV input/output-to-power line; 500 V input-to-output or output-to-P+ supply

Overvoltage Category: Installation overvoltage category II; local level with smaller transient overvoltages than installation overvoltage category III

Operating Temperature Range: -40 to 65°C

Storage Temperature Range: -40 to 85°C

Relative Humidity: 0 to 90% non-condensing

Connections: Removable screw terminal blocks accept 12 to 22 AWG wire, RJ45 for external relays, digital I/O, and serial communication adapters

Enclosure: ¾ DIN, high impact plastic, UL 94V-0, color: black

Mounting: ¾ DIN panel cutout required: 92 x 45 mm (3.622 x 1.772”); two panel mounting bracket assemblies are provided

Tightening Torque: Screw terminal connectors: 5 lb-in (0.56 Nm)

Overall Dimensions: 119 W x 62 H x 143 mm D (4.68 x 2.45 x 5.64")

Weight: 269 g (9.5 oz)

Dual Process Input

Inputs: 2 inputs, each separately, field selectable: 0 to 20, 4 to 20 mA, 10 V (0 to 5, 1 to 5, 0 to 10 V), MODBUS PV (slave)

Channels: Channel A, Channel B, Channel C (math channel)

Accuracy: ±0.03% of calibrated span ±1 count, square root and programmable exponent accuracy range: 10 to 100% of calibrated span

Temperature Drift: 0.005% of calibrated span/°C max from 0 to 65°C ambient, 0.01% of calibrated span/°C maximum from -40 to 0°C ambient

Signal Input Conditioning: Linear, square root, programmable exponent, or round horizontal tank volume calculation

Multi-Point Linearization:
2 to 32 points for PV or PV1; 2 to 8 points for PV2 (dual-scale level feature)

Programmable Exponent: 1.0001 to 2.9999

Low-Flow Cutoff: 0 to 999999 (0 disables cutoff function)

Decimal Point: Up to 5 decimal places or none: dddddd, dd.dddd, ddddd.dd, ddddd.d, or dddddd

Calibration Range:
4 to 20 mA: Minimum span; input 1 and input 2: 0.15 mA ±10 V: Minimum span; input 1 and 2: 0.10V An Error message will appear if input 1 and input 2 signals are too close together

Input Impedance:

Voltage Ranges: Greater than 500 kΩ

Current Ranges: 50 to 100 Ω (depending on selectable fuse impedance)

Input Overload: Current input protected by selectable fuse, 30 Vdc max; fuse resets automatically after fault is removed

Relays

Rating: 2 or 4 SPDT (Form C) internal and/or 4 SPST (Form A) external; rated 3 A @ 30 Vdc and 125/250 Vac resistive load; 1/14 HP (~50 W) @ 125/250 Vac for inductive loads such as contactors, solenoids, etc.

Noise Suppression:
Recommended for each relay contact switching inductive loads

Deadband: 0 to 100% of span, user programmable

High or Low Alarm: User may program any alarm for high or low trip point; unused alarm LEDs and relays may be disabled (turned off)

Relay Operation: Automatic (non-latching), latching (requires manual acknowledge), sampling (based on time), pump alternation control (2 to 8 relays), off (disable unused relays and enable interlock feature, manual on/off control mode)

Time Delay: 0 to 999.9 seconds, on and off relay time delays; programmable and independent for each relay

Fail-Safe Operation: Programmable and independent for each relay

Note: Relay coil is energized in non-alarm condition. In case of power failure, relay will go to alarm state.

Auto Initialization: When power is applied to the meter, relays will reflect the state of the input to the meter

Serial Communications
Protocol: MODBUS RTU
Meter Address/Slave ID: 1 - 247

Baud Rate: 300 to 19,200 bps

Transmit Time Delay: Programmable between 0 and 199 ms

Data: 8 bit (1 start bit, 1 or 2 stop bits)

Parity: Even, odd, or none with 1 or 2 stop bits

Byte-to-Byte Timeout: 0.01 to 2.54 seconds

Turn Around Delay: Less than 2 ms (fixed)

Isolated 4 to 20 mA Transmitter Output

Output Source: Process variable (PV), max, min, set points 1 through 8, manual control setting, or MODBUS input

Scaling Range: 1.000 to 23.000 mA for any display range

Factory Calibration: 4.000 to 20.000 = 4 to 20 mA output

Analog Output Programming:
23.000 mA maximum for all parameters: overrange, underrange, max, min, and break

Accuracy: ± 0.1% of span ± 0.004 mA

Temperature Drift: 0.4 µA/°C maximum from 0 to 65°C ambient, 0.8 µA/°C maximum from -40 to 0°C ambient

Note: Analog output drift is separate from input drift.

Isolated Transmitter Power Supply: Terminals I+ & R: 24 Vdc ± 5% @ 40 mA maximum, may be used to power the 4 to 20 mA output or other devices

External Loop Power Supply: 35 Vdc maximum

Output Loop Resistance: 24 Vdc Power Supply: 10Ω minimum, 700Ω maximum 35 Vdc (External) Power Supply: 100 Ω minimum, 1200 Ω maximum

Digital I/O Expansion Module

Channels: 4 digital inputs and 4 digital outputs per module

System: Up to 2 modules for a total of 8 inputs and 8 outputs

Digital Input Logic:
High: 3 to 5 Vdc
Low: 0 to 1.25 Vdc

Digital Output Logic:
High: 3.1 to 3.3 Vdc
Low: 0 to 0.4 Vdc

Source Current: 10 mA maximum

Sink Current: 1.5 mA minimum

+5 V Terminal: To be used as pull-up for digital inputs only

4-Relay Expansion Module

Relays: 4 Form A (SPST) rated 3 A @ 30 Vdc and 125/250 Vac resistive load; 1/14 HP (~50 W) @ 125/250 Vac for inductive loads
Meter Copy
The Copy feature is used to copy (or clone) all the settings from one DP6060 to other DP6060 meters in about 20 seconds! The Copy function is a standard feature on all meters. It does not require a communications adapter, only an optional cable assembly, model number DPA1200. See the ordering information for complete details.
