

OPTICAL LEVEL SWITCH

LVE-950 Series

- ✓ Polysulfone or Brass Construction
- ✓ Smallest Electro-Optical Sensor Available
- ✓ No Moving Parts

The LVE-950 Series are the smallest electro-optic liquid level sensors OMEGA offers, they also carry a high operating temperature capability at 110°C (230°F). The Polysulfone housing ensures this sensor is compatible for use in a broad range of media. The LVE-950 design features an over-molded electronics insert, TPE insulated wires, and fluorosilicone O-ring seals that create a water-tight, environmentally resistant assembly. With its brass housing and fused glass prism, the LVE-951-B is built to be more durable in challenging environments, including outdoors and engine bays. The LVE-950 is a perfect choice for industrial applications desiring an extremely small, 'no-moving-parts' sensor rated for high temperatures.
