The HX92B Series transmitters provide remote and on-site monitoring of relative humidity. It is available with either voltage or 2-wire current output. The transmitter output is linearized and temperature compensated. Current output models enable placing of the transmitter at a remote location virtually any distance away from the measuring device. All models use an accurate digital sensor. A stainless steel mesh type filter, easily removable for cleaning, protects the sensor. Mounting screws are easily accessible inside the rugged, polycarbonate enclosure which protects the electronics to NEMA 13 (IP54) specifications.
