**(px0105l1-1kavl, shown actual size.)**

OMEGA’s PX1005 is available in many standard ranges from 15 psi to 1000 psi. A calibration record is supplied with every unit.

**PX1005 Series**

- High Performance
- High Reliability
- 0.1% Stability for 18 Months
- Operates From -196 to 149°C (-320 to 300°F)
- Exceptional Calibration Stability

OMEGA’s PX1005 sputtered thin-film pressure transducer was designed for cryogenic service; it can operate in temperatures from -196 to 149°C (-320 to 300°F). Yet, even in these extreme temperatures, it provides outstanding accuracy, long-term calibration stability, and reliability.

Static accuracy is ±0.25%, and thermal zero and sensitivity shifts over the compensated range of -196 to 27°C (-320 to 80°F) are less than ±0.01%/°F. The all-welded stainless steel pressure cavity and double-isolated case ensure reliability in the inherently tough environments of cryogenic service.

OMEGA’s thin-film technology makes this premium performance possible. The strain gages are sputter-deposited, forming a molecular bond with the substrate. There is virtually no shift, drift, or creep to cause the transducer’s calibration to change.
