Omega DataSuite v2.0.6.X Installation CD Read Me

Microsoft .NET Framework Update for Windows XP and Vista

Omega DataSuite requires Microsoft .NET Framework 3.5 in order to run, and users of older operating systems such as WinXP and Vista might experience problems if the most recent .NET updates have not been installed.

You will require this update if, when trying to launch DataSuite, the application will not open and the DataSuite process in the Windows Task Manager is running at 50% CPU.

This Omega DataSuite installation CD includes the relevant .NET update files, should you require them.

They are located in a folder named: .NET Update Files

Follow the instructions below to update your system:

Windows XP Users

These updates should be installed in the following sequence:

1. Install the update for the .NET Framework 2.0 Service Pack 2 - NDP20SP2-KB957543-x86.exe
2. Install the update for the .NET Framework 3.0 Service Pack 2 - NDP30SP2-KB958483-x86.exe
3. Install the update for the .NET Framework 3.5 Service Pack 1 - NDP35SP1-KB958484-x86.exe

If your OS is not English, go here to download the appropriate files:

http://www.microsoft.com/download/en/details.aspx?displaylang=en&id=10006

Windows Vista

These updates should be installed in the following sequence:

1. Install the update for the .NET Framework 2.0 Service Pack 2 - Windows6.0-KB958481-x86.msu
2. Install the update for the .NET Framework 3.0 Service Pack 2 - Windows6.0-KB958483-x86.msu
3. Install the update for the .NET Framework 3.5 Service Pack 1 - NDP35SP1-KB958484-x86.exe

If your OS is not English, go here to download the appropriate files:

http://www.microsoft.com/download/en/details.aspx?id=16211

Please consult the OM-DaqLink User Guide for further software installation and activation instructions.
