Wireless DIN Rail Receiver
With 4 Analog Outputs and Alarms

UWTC-REC4

- Works with Up to 48 Wireless Transmitters
- Four 0 to 5 Vdc, 0 to 10 Vdc or 4 to 20 mA Analog Outputs
- Interface Directly to PLCs, Chart Recorders and Data Loggers
- Standard DIN Rail Enclosure
- Built-in Programmable Alarms for Each Channel
- Field Programmable via USB
- Included Software Turns a PC Into a Multi-Channel Meter, Chart Recorder or Data Logger

The UWTC-REC4 wireless DIN rail receiver can work with up to 48 wireless transmitters, displaying their data in real time on your PC. The UWTC-REC4 also has four independent analog outputs, which can be user-programmed as a retransmission signal from any input channel, driving a PLC or data logger. The UWTC-REC4 is compatible with the full line of UW wireless transmitters from OMEGA; choose from thermocouple, RTD, %RH, infrared (non-contact) temperature, pH, as well as process voltage/current models.

The standard DIN rail mount design provides for easy mounting, and fast connections to other DIN rail equipment, including PLCs. The optional iDRN-PS-1000 power supply can power up to three UWTC-REC4 units, which can give you up to 12 analog outputs.

Specifications
Power: 12 to 24 Vdc @ 250 mA
Analog Output: 4 independent, non-isolated, retransmission
0 to 5 Vdc, 0 to 10 Vdc or 4 to 20 mA
Alarms (Programmable): One per channel, rising/falling activation
Alarm Type: Open drain, 100 mA maximum
Power, Output, Alarm Connection: Screw terminals
Operating Ambient: 0 to 55°C (32 to 131°F), 90% RH non-condensing
Radio Frequency (RF) Transceiver Carrier: ISM 2.4 GHz, direct sequence spread spectrum
RF Data Packet Standard: IEEE 802.15.4, open communication architecture
Enclosure: DIN rail (plastic)
Dimensions: 93 H x 39 W x 125 mm D (3.64 x 1.55 x 4.93”)

Note: The UWTC-REC4 can be powered directly by the PLC or data logger you are connecting to and will not require an additional power source if the instrument has 12 to 24 Vdc @ 250 mA available for external devices. If your instrument does not have a power source available for external devices you will need to add an additional power supply (iDRN-PS-1000) to power the wireless receiver. This power supply can power up to 3 UWTC-REC4 receivers. Visit OMEGA for more information.
Interfaces Directly with PLCs and Multi-Channel Data Loggers to Form a Complete Wireless Measurement and Control System!

Note: Because of transmission frequency regulations, these products may only be used in the US, Canada, Europe and China. Comes complete with measurement/data logging software, USB programming cable, and operator’s manual.

* Specify analog output signal: “V1” for 0 to 5 Vdc; “V2” for 0 to 10 Vdc, “TC” for Type K thermocouple, or “MA” for 4 to 20 mA signal.

Ordering Example: UWTC-REC4-MA, 48-channel DIN rail receiver with four 4 to 20 mA outputs and alarms.

Typical system shown above includes any 4 wireless transmitters with one UWTC-REC4-MA wireless receiver with analog outputs and HE-XE102 PLC. (Receiver and PC only).
